Purpose

Shared **GitHub Actions workflows**, reusable composite actions, and pipeline contracts used across ERES Institute repositories. This repository is the single source of truth for how ERES code and documents are validated, released, and archived.

Pipeline Model — BEST / SOUND / GOOD

The ERES Trilogy maps directly onto a three-gate CI/CD pipeline:

```
commit ──▶  [ BEST ]  ──▶  [ SOUND ]  ──▶  [ GOOD ]  ──▶  release
            Personal       Public-Private    Graceful
            (Book 1)       (Book 2)          Evolution
                                             (Book 3)
```

Gate	Trilogy	What It Checks
BEST	Book 1 — ONE GOOD · Synthetic AI Constitution Through UBIMIA	Personal-grade hygiene: lint, format, type-check, secret-scan.
SOUND	Book 2 — SECURITY-CLEARANCE · IDIPITIS Framework for NBERS	Public-Private-grade integrity: unit + integration tests, SPT Triad checks, dependency audit.
GOOD	Book 3 — DATA-INTEGRITY · FAVORS for CBGMODD GAIA SOMT	Graceful-evolution-grade: MIEVM validation, Erasure Completeness Ratio (ECR), release-readiness.

Trifecta Protocol Gates

Production-bound changes must pass the **Trifecta Protocol**:

1. **ONE-GOOD** — ethical/moral vector check (Three Governing Principles).
2. **SECURITY-CLEARANCE** — SPT Triad (`ERES-SPT-2026-001`) enforcement.
3. **DATA-INTEGRITY** — provenance, versioning, and MIEVM corroboration.

Reusable Actions

Typical contents of this repository:

- `.github/workflows/best.yml` — lint, format, secret-scan baseline.
- `.github/workflows/sound.yml` — test matrix, SPT Triad validators.
- `.github/workflows/good.yml` — MIEVM regression harness, release checklist.
- `actions/mievm-validate/` — composite action invoking the ensemble (Claude, Grok, DeepSeek, ChatGPT) against specification deltas.
- `actions/spt-check/` — SECUIR / VERTECA / FAVORS / CBGMODD static analysis.

Using These Workflows From Another Repo

```yaml
```

```yaml
# .github/workflows/ci.yml in a consumer repo
name: ERES CI
on: [push, pull_request]

jobs:
  best:
    uses: ERES-Institute-for-New-Age-Cybernetics/Workflows/.github/workflows/best.ym
  sound:
    needs: best
    uses: ERES-Institute-for-New-Age-Cybernetics/Workflows/.github/workflows/sound.y
  good:
    needs: sound
    uses: ERES-Institute-for-New-Age-Cybernetics/Workflows/.github/workflows/good.ym
```

Governing Formula

```
C = R × P / M
```

The pipeline is itself a Cybernetics instrument: each gate is a Method, each artifact is a Resource, each gate-promotion is a Purpose-check.
