"Don't hurt yourself. Don't hurt others. Build for generations to come."

Section 1: Preamble — Why This Disclaimer Exists

The ERES Institute uses the term “Bitcoin Mining” deliberately and with full awareness that it will generate confusion, curiosity, and skepticism in equal measure. This disclaimer exists to resolve the confusion, honor the curiosity, and address the skepticism—before a single sensor is attached or a single Meritcoin is generated.

The term “ERES Bitcoin Mining” is a structural analogy, not a literal equivalence. ERES does not mine Bitcoin (BTC). ERES does not operate Bitcoin mining hardware. ERES does not claim any affiliation with, endorsement by, or competition with the Bitcoin protocol, the Bitcoin Foundation, Bitcoin Core developers, or any Bitcoin mining pool, exchange, or custodial service. The ERES Institute holds no position on whether Bitcoin is a good or bad investment, and nothing in any ERES document should be construed as financial advice regarding Bitcoin, cryptocurrency, or any other financial instrument.

What ERES does is this: it recognizes that Bitcoin’s Proof-of-Work consensus mechanism is the most widely understood model for converting energy expenditure into verifiable, tamper-evident, economically valuable digital records. By mapping the Meritcoin Proof-of-Resonance mechanism onto Bitcoin’s conceptual vocabulary, ERES makes the Meritcoin architecture immediately intelligible to anyone who already understands Bitcoin mining. The analogy is pedagogical, not technical. The underlying systems are structurally distinct.

This disclaimer formalizes every point at which the analogy holds and every point at which it breaks.

Section 2: What ERES Bitcoin Mining IS and IS NOT

2.1 Identity and Nature

Status	Statement
IS	A structural analogy that uses Bitcoin mining vocabulary to explain Meritcoin Proof-of-Resonance to an audience that already understands Proof-of-Work.
IS NOT	Actual Bitcoin (BTC) mining. ERES does not mine BTC, does not operate ASICs or GPUs for hash computation, and does not participate in the Bitcoin blockchain's consensus mechanism.
IS	An education and competency certification architecture that generates Meritcoin (MRC) through measurable human improvement, tracked by BERA Resonance Indices and recorded on GraceChain.
IS NOT	A cryptocurrency in the conventional sense. Meritcoin is not listed on any exchange, is not an ERC-20 token, is not built on Ethereum, Solana, or any existing blockchain, and makes no claim of fungibility with BTC or any other cryptocurrency.
IS	A protocol for converting human effort (learning, healing, creating, mentoring) into verifiable, tamper-evident, economically meaningful digital records of civilizational contribution.
IS NOT	A get-rich-quick scheme, a pump-and-dump vehicle, a speculative asset marketed for capital appreciation, or a financial instrument of any kind. ERES is not a business. Meritcoin is not an investment in the securities-law sense.
IS	Governed by the three foundational principles: Don't hurt yourself, Don't hurt others, Build for generations to come. These are non-negotiable engineering constraints, not marketing slogans.
IS NOT	Governed by market sentiment, trading volume, whale manipulation, or any mechanism that allows value to be extracted from the system by parties who do not contribute resonance.

2.2 Technology and Infrastructure

Status	Statement
IS	Built on GraceChain, a purpose-designed distributed ledger optimized for competency records, resonance metrics, and credential state management.
IS NOT	Built on the Bitcoin blockchain, Ethereum, or any existing Layer 1 or Layer 2 protocol. GraceChain shares architectural principles (append-only, tamper-evident, consensus-verified) but is an independent protocol.
IS	Powered by BERA Sensor Suite hardware (HRV monitors, EDA sensors, thermal cameras, biophoton detectors) that measures bioenergetic state through calibrated, reproducible instrumentation.
IS NOT	Powered by ASICs, GPUs, FPGAs, or any cryptographic hash-computation hardware. No electricity is consumed for mining purposes beyond the negligible power requirements of personal biosensors and mobile devices.

IS	Validated through MIEVM (Multi-Instrument Ensemble Validation Method) using Claude, Grok, DeepSeek, and ChatGPT as parallel validation nodes, ensuring no single AI's biases corrupt the measurement.
IS NOT	Validated through SHA-256 hash computation, nonce discovery, or any mathematical puzzle-solving mechanism. The "work" in Proof-of-Resonance is physiological and educational, not computational.
IS	Secured by the biological non-poolability of individual resonance. Your heartbeat, your sleep architecture, your bioenergetic coherence cannot be aggregated with another person's. Each miner's proof is intrinsically individual.
IS NOT	Secured by hash rate majority assumptions. There is no "51% attack" vector because resonance cannot be pooled, transferred, or concentrated by a single entity.

2.3 Economics and Value

Status	Statement
IS	An abundance-model economy where total system value increases as more participants improve their competencies. One person's improvement does not diminish another's—it enhances the resonance field in which all operate.
IS NOT	A scarcity-model economy. There is no 21-million-unit cap, no halving schedule, and no deflationary mechanism. Meritcoin supply is bounded by the natural rate limits of human improvement, not by an arbitrary mathematical ceiling.
IS	Designed for value generation through genuine human development. Meritcoin accrues to individuals who demonstrably improve their health literacy, legal literacy, safety competency, and productive skills as measured by calibrated instruments.
IS NOT	Designed for value extraction through speculation, arbitrage, or market-making. ERES explicitly rejects any mechanism that allows value to be captured by parties who do not generate resonance.
IS	Delivered "relatively free" through UBIMIA (Universal Basic Income via Meritcoin and Intelligent Automation). The learner/miner pays zero monetary cost. The investment of time and cognitive effort is the "relative" component.
IS NOT	A paid service, subscription product, or fee-based platform. There is no tuition, no premium tier, no paywall, and no mechanism by which financial wealth can purchase accelerated resonance. You cannot buy your way to higher Meritcoin yield.
IS	Compatible with simultaneous Bitcoin mining. A participant can mine BTC with ASICs in their facility while mining MRC with BERA sensors on their body. The two systems are non-competitive.
IS NOT	A replacement for Bitcoin, a "Bitcoin killer," or a competitor to any existing cryptocurrency. ERES and Bitcoin solve different problems. Bitcoin secures financial transactions. Meritcoin secures civilizational competency records. They coexist.

2.4 Legal and Regulatory

Status	Statement

IS	Licensed under CARE Commons Attribution License v2.1 (CCAL). All specifications, protocols, curriculum content, and documentation are open-commons. No proprietary lock-in.
IS NOT	Licensed under MIT License, GPL, Apache, or any existing open-source software license. CCAL is purpose-designed for the ERES corpus and includes moral-vector constraints that standard licenses do not contain.
IS	Anchored in international law through the Hague Submission (ERES-HAGUE-2026-001) and cross-jurisdictional certification through the SCALULAR Engine (323 paragraphs, 10 parts).
IS NOT	Legal advice. Nothing in any ERES document, including this disclaimer, constitutes legal, financial, tax, or investment advice. ERES is not a law firm, not a financial advisor, not a broker-dealer, and not a registered investment company.
IS	Subject to the fear-of-retribution elimination principle. Any participant who reports systemic failures, questions validity, or challenges credentialing decisions is architecturally protected.
IS NOT	Subject to non-disclosure agreements, non-compete clauses, or any mechanism that restricts participants' freedom to leave, criticize, or publicly evaluate the system.

Section 3: Honest Risk Disclosure

The three foundational principles require that ERES never hurt the participant. Honest risk disclosure is an expression of the first principle (Don't hurt yourself) applied to the person reading this document. The following risks are real:

3.1 Technology Risk

The PlayNAC KERNEL is pre-production software. The BERA Sensor Suite requires hardware that is not yet mass-manufactured. GraceChain is a specification, not a deployed ledger. Early participants are operating on infrastructure that is in active development. Components may fail, specifications may change, and data formats may evolve. The ERES dual-format archival standard (Markdown + PDF) mitigates specification volatility, but does not eliminate implementation risk.

3.2 Economic Risk

Meritcoin has no established market value. It is not traded on any exchange. It may never be traded on any exchange. Its purchasing power within the TETRA CERT ecosystem depends on the ecosystem's growth, which depends on adoption, which is uncertain. Any participant who expects Meritcoin to achieve a specific fiat-currency value at a specific time is operating on assumptions that ERES does not endorse and cannot guarantee. Do not invest capital you cannot afford to lose in BERA sensor hardware or any ERES-related infrastructure.

3.3 Regulatory Risk

Meritcoin's regulatory classification is undefined in most jurisdictions. It may be classified as a utility token, a security, a commodity, a loyalty point, or something entirely novel. Regulatory frameworks are evolving globally. Participants in jurisdictions with restrictive cryptocurrency regulation should seek independent legal counsel before engaging with any Meritcoin-generating activity. ERES provides the SCALULAR legal framework and the SSLA curriculum to support participants' legal literacy, but this does not substitute for jurisdiction-specific legal advice.

3.4 Health Risk

The Bioenergetics Course Guide involves bioenergetic self-assessment using consumer-grade sensors. These sensors are not medical devices. The data they produce is not a medical diagnosis. The BERA indices (ARI, ERI, RHC, RCI) are research metrics, not clinical biomarkers approved by the FDA, EMA, or any national health authority. No ERES curriculum module, no PlayNAC recommendation, and no BERA measurement should be treated as a substitute for professional medical advice, diagnosis, or treatment. If you are experiencing a health emergency, call emergency services. Do not consult PlayNAC.

3.5 Single-Researcher Risk

The ERES Institute is the work of a solo independent researcher (Joseph Allen Sprute) with no institutional backing, no board of directors, and no organizational redundancy. The architecture is designed to survive the loss of any individual (including its founder)—the complete specification is published, version-controlled, and self-archiving. But the current operational

state is dependent on a single person's continued capacity. This is an honest statement of institutional risk that the protocol's self-documenting design is intended to mitigate but cannot fully eliminate.

Section 4: How to BEST Optimize Your ERES Mining Operation

4.1 The BEST Framework for Optimization

BEST is not an adjective. It is the first element of the ERES moral vector triad: BEST / SOUND / GOOD. Every optimization in this section is tested against all three:

BEST: Does this optimization produce the optimal outcome for the miner AND the civilization? An optimization that maximizes your Meritcoin yield at the expense of your health, your community, or your integrity is not BEST—it is extraction wearing a resonance costume.

SOUND: Is this optimization structurally robust? Does it hold under adversarial conditions, long-term stress, and changing circumstances? A fragile optimization that works only in ideal conditions is not SOUND.

GOOD: Is this optimization ethically aligned? Does it serve human flourishing? An optimization that is technically efficient but morally vacant is not GOOD.

Every recommendation below passes all three tests. If you discover an optimization that fails any one of them, do not implement it regardless of its yield potential.

4.2 The 12 Optimizations

#	Optimization	Description	Yield Impact
1	**Sleep Architecture**	Your highest-yield passive mining operation. Consistent sleep/wake times, 7–9 hours per night, dark room, no screens 60 min before bed. Sleep directly feeds RHC. A 15% improvement in sleep quality can produce a 20–30% improvement in RHC score. This is your cheapest, most reliable upgrade.	**RHC +20–30%**
2	**HRV Training**	Deliberate HRV improvement through coherent breathing (5.5 breaths/minute, equal inhale/exhale), cold exposure, and aerobic conditioning. HRV is the single most information-dense bioenergetic signal. Dedicated HRV training is the equivalent of overclocking your core ASIC.	**RHC +15–25%**
3	**Sensor Calibration**	Calibrate your BERA sensors weekly. Uncalibrated sensors produce noisy data, which reduces your effective Resonance Rate. In BTC terms: calibration is firmware optimization. A well-calibrated $50 HRV monitor outperforms an uncalibrated $500 multi-sensor suite.	**All +10–15%**
4	**Consistent Measurement Windows**	Measure at the same time every day under the same conditions (fasting state, hydration level, activity level). Biological signals have circadian variation; inconsistent timing introduces noise that masks genuine improvement. Standardize your measurement protocol.	**All +5–10%**
5	**Curriculum Progression**	Advance through the Bioenergetics Course Guide levels (101→201→301→401). Each level increases	**MRC ×5.0x at Level 401**

		your Cert_Level multiplier: 1.0x → 1.5x → 2.0x → 3.0x → 5.0x. This is the single highest-leverage optimization: a 5.0x multiplier on the same ΔResonance produces 5x the Meritcoin. Invest your time in certification.	
6	**Teach Others**	Mentoring lower-level miners activates your Community_Multiplier. Every improvement in a miner you mentor generates a multiplier bonus on your own yield. Teaching is the highest-yield active mining operation. In BTC terms: running a mining pool where everyone's hash rate also boosts yours.	**MRC +25–50% via multiplier**
7	**Nutrition Timing**	Aligned meal timing supports circadian rhythm coherence (RHC). Consistent eating windows (e.g., 8–10 hour feeding window) reduce metabolic noise and improve ERI readings. You do not need a specific diet; you need a consistent pattern. Your body is a rhythm machine—feed it rhythmically.	**ERI +10–20%, RHC +5–10%**
8	**Stress Management**	Chronic stress degrades all four BERA indices simultaneously. It is the single most destructive force to mining yield. Stress management is not optional wellness; it is essential infrastructure maintenance. Breathing exercises, nature exposure, social connection, and creative expression are not luxuries—they are mining optimizations.	**All +15–25%**
9	**Movement Practice**	Regular physical movement (walking, swimming, yoga, dance, sport—any modality you enjoy and sustain) improves cardiovascular coherence (RHC), thermal regulation (ERI), and stress resilience (ARI). The specific modality matters less than consistency. Move daily. Your body is your ASIC; keep it cooled and running.	**RHC +10–20%, ERI +5–15%**
10	**SOMT Journaling**	Daily metadata capture through PlayNAC conversation: what you ate, how you slept, what you learned, how you felt. SOMT metadata enriches your GraceChain records and enables PlayNAC to provide better-calibrated EarnedPath recommendations. Richer metadata = more precise intervention = faster ΔResonance = more MRC.	**All +5–10% (indirect)**
11	**Dual Mining (BTC+MRC)**	If you currently mine BTC, do not stop. Use BTC profits to fund BERA sensor acquisition (Phase 2 in the Transition Path). Run both operations simultaneously. Your BTC rig generates fiat-denominated income; your BERA rig generates resonance-denominated income. Diversification across consensus mechanisms is the most robust economic position.	**Portfolio diversification**
12	**Talon_Optics Investment**	Deploy capital (from any source, including BTC profits) into the Talon_Optics Investment Vehicle. Your capital funds infrastructure that all miners operate on. Your return is MRC proportional to the total resonance your capital enables. You become simultaneously a miner (personal resonance) and an investor (systemic resonance). Maximum yield = maximum alignment.	**MRC + systemic return**

Section 5: Anti-Optimizations — What NOT to Do

The three foundational principles prohibit certain behaviors that might appear to optimize yield but actually violate the architecture's moral constraints. These are anti-optimizations: actions that produce short-term metric improvement at the cost of genuine resonance.

5.1 Do Not Game Your Sensors

Deliberate manipulation of biosensor data (e.g., taking stimulants before HRV measurement, artificially controlling breathing during measurement windows, using someone else's data) produces false ΔResonance. MIEVM multi-instrument validation is designed to detect statistical anomalies inconsistent with genuine improvement. Fraudulent data will eventually be identified and flagged, resulting in credential suspension under CBGMODD state-transition governance. More importantly: you are only fooling yourself. The system exists to help you improve. Gaming it means you do not improve. Don't hurt yourself.

5.2 Do Not Mine for Meritcoin

This sounds paradoxical but is the most important anti-optimization. If your primary motivation is Meritcoin accumulation, you will optimize for metrics rather than genuine health, learning, and contribution. Meritcoin is a byproduct of resonance. Resonance is a byproduct of genuine improvement. Genuine improvement is a byproduct of caring about your own wellbeing and the wellbeing of others. The causal chain runs: caring → improvement → resonance → Meritcoin. If you start at the end (Meritcoin) and try to work backward, you get gaming, not mining. Mine for yourself. Meritcoin follows.

5.3 Do Not Sacrifice Sleep for Curriculum

Level progression (Section 4, Optimization #5) increases your Cert_Level multiplier. Sleep optimization (Optimization #1) increases your base ΔResonance. If you sacrifice sleep to accelerate curriculum completion, you destroy your base while increasing your multiplier. A 5.0x multiplier on a degraded ΔResonance yields less than a 1.5x multiplier on excellent ΔResonance. Protect your base. The curriculum will wait. Your circadian rhythm will not.

5.4 Do Not Compare Your Resonance to Others

In Bitcoin, miners compete for block rewards. In Meritcoin, miners compete only against their own previous state. Your ΔResonance is measured against your own baseline, not against a global leaderboard. A miner who starts with poor health and improves moderately generates more Meritcoin (relative to their starting point) than a miner who starts with excellent health and improves marginally. The system rewards effort and improvement, not absolute performance. Comparison is not only unhelpful—it is structurally irrelevant to your yield.

5.5 Do Not Neglect the Non-Health Pillars

The full TETRA CERT multiplier (5.0x at Level 401) requires engagement with all four pillars: HEALTH, LAW, PROTECTION, and SKILLS/TRADE. A miner who perfects their SSHP (HEALTH) score but ignores SSLA (LAW), SSPS (PROTECTION), and SSST (SKILLS/TRADE) caps their multiplier at 2.0x. The architecture is designed holistically: the healthiest person who

does not understand their legal rights, cannot protect their data, and cannot contribute productive skills is not fully resonant. Complete the TETRA. That is the optimization.

Section 6: Final Declarations

6.1 The ERES Institute's Position

The ERES Institute for New Age Cybernetics, its founder Joseph Allen Sprute, and all materials published under the CARE Commons Attribution License v2.1 make the following declarations:

1. **No financial guarantees.** ERES does not guarantee, promise, imply, or suggest that any participant will achieve any specific financial outcome from Meritcoin generation. Meritcoin has no established market value. Future market value, if any, is uncertain and unpredictable.
2. **No medical claims.** ERES does not claim that any BERA measurement, PlayNAC recommendation, or bioenergetics curriculum module can diagnose, treat, cure, or prevent any disease or medical condition. The SSHP pillar provides health literacy, not healthcare.
3. **No legal claims.** ERES does not claim that SCALULAR, the Hague Submission, or any ERES legal instrument has been adjudicated, ratified, or endorsed by any court, legislature, or regulatory body. These are filed specifications, not court rulings.
4. **Full transparency.** The complete ERES corpus is publicly available in the Support-Documentation GitHub repository. Every specification, every white paper, every conversation export, and every validation record is accessible for independent review. There are no hidden terms, no secret protocols, and no undisclosed conditions.
5. **Right to exit.** Any participant may cease all ERES-related activity at any time, for any reason, without penalty, without loss of earned credentials (which persist on GraceChain), and without obligation. There is no lock-in period, no exit fee, and no non-compete.

6.2 The Participant's Acknowledgment

By engaging with any ERES mining activity, the participant acknowledges that they have read and understood this disclaimer; that they understand the distinction between the Bitcoin Proof-of-Work analogy and the Meritcoin Proof-of-Resonance mechanism; that they accept the technology, economic, regulatory, health, and single-researcher risks described in Section 3; and that they commit to the three foundational principles as non-negotiable constraints on their mining operation.

6.3 The BEST/SOUND/GOOD Test

The final word belongs to the moral vector. Every aspect of ERES Bitcoin Mining—the analogy, the sensors, the curriculum, the Meritcoin, the GraceChain, the optimization strategies, and this disclaimer itself—is tested against the same three questions:

Is it BEST? Is it SOUND? Is it GOOD?

If the answer to all three is yes, proceed. If the answer to any one is no, stop and reconsider. This is not a compliance requirement. It is an engineering constraint built into the architecture at every layer, from the foundational equation (C = R × P / M) through the SCALULAR legal

instrument through the PlayNAC kernel through the Meritcoin reward mechanism through the three principles that govern everything:

“Don’t hurt yourself. Don’t hurt others. Build for generations to come.”

It’s not mining — it’s tuning.

END OF DISCLAIMER

ERES-MINERS-DISCLAIMER-2026-001 v1.0 · CCAL v2.1
