THE ERES PATRIOT DIVIDEND

A Strategic Framework for National Resilience Under Systemic Stress

WHITE PAPER

Document ID: ERES-PD-2026-001
Classification: Strategic Policy Proposal
Version: 2.0 | March 19, 2026

EXECUTIVE SUMMARY

The United States faces a compound crisis: geopolitical entanglement generating perpetual economic shock, domestic inflation eroding real income for the working and middle classes, and a fracturing social contract between the governed and the governing. Traditional policy instruments—tax cuts, military spending increases, or austerity—cannot match the velocity of these converging threats.

This paper proposes the **ERES Patriot Dividend**: a strategic, time-bound direct cash transfer to every American adult, funded by windfall profit recapture from crisis-benefiting industries and a new class of Treasury-issued Patriot Bonds. It is not welfare. It is not ideology. It is a real-time reciprocal contract between the state and the citizen—immediate, measurable, and temporary.

> *CORE_ROOT SolutionProblem: The absence of a reciprocal economic contract between the state and the citizen during extreme systemic stress. The state demands sacrifice but offers no immediate, tangible reciprocity. This gap destroys legitimacy and destabilizes the system from within.*

The Patriot Dividend closes that gap. It solves simultaneously for legitimacy, demand destruction, social contract fracture, inequality acceleration, and the information deficit required for crisis management—all through a single, administratively lean mechanism.

Within the ERES framework, the Dividend instantiates the foundational governance equation **C = R × P / M**—Cybernetics equals Resource times Purpose divided by Method. The Resource is windfall-recaptured capital and sovereign credit. The Purpose is national resilience and citizen survival. The Method is direct digital transfer via existing federal infrastructure. When Purpose is clear and Method is efficient, the system corrects. When institutional friction (M) overwhelms available resource (R) and clear purpose (P), systems fail. The Patriot Dividend is engineered to keep M low, R flowing, and P unambiguous.

SECTION 1: THE PROBLEM DEFINITION

1.1 The Tri-Fold Crisis

The current strategic environment presents three mutually reinforcing crisis vectors. Each alone would strain national capacity. Together, they form a compound failure mode that conventional policy cannot address sequentially—they must be solved in parallel.

Crisis Vector	Manifestation	Root Consequence
Geopolitical Entanglement	Prolonged conflict disrupting global energy supply chains; potential closure of critical maritime chokepoints; 10–15% of global oil supply at risk.	Perpetual economic shock with no clear exit ramp; allied trust collapse; escalation risk.
Domestic Economic Strain	Fuel and grocery price spikes; real income erosion for working and middle classes; housing cost pressure compounds energy inflation.	Voter rage; demand destruction; recession risk; political instability.
Social Contract Fracture	Gap between campaign commitments and crisis reality; perception of elite insulation from shared burden; institutional credibility deficit.	Legitimacy collapse; civil unrest potential; refusal of national service; political violence risk.

1.2 The CORE_ROOT SolutionProblem

The state demands sacrifice but offers no immediate, tangible reciprocity. The citizen bears the cost of the crisis but receives no direct stake in the management of it. This gap destroys legitimacy and destabilizes the system from within.

Traditional remedies—veterans' benefits, tax credits, future entitlement promises—operate on timescales of months to years. The crisis moves in real-time. The solution must move with it. The Patriot Dividend is that solution: immediate, universal, and reciprocal.

SECTION 2: THE SOLUTION — ERES PATRIOT DIVIDEND

2.1 Definition

The ERES Patriot Dividend is a monthly, non-means-tested cash payment to all adult U.S. citizens (approximately 277 million individuals), funded by a combination of wartime windfall profit recapture and sovereign debt issuance framed as national investment. It is:

- Universal: Paid to every adult citizen regardless of income, creating political buy-in across all demographics and eliminating administrative overhead of means-testing.

- Immediate: Distributed monthly via existing digital rails (FedNow, Treasury Direct, IRS infrastructure).
- Conditional (Soft): Opt-in grants access; opt-out is permitted but forfeits the dividend. Participation implies acceptance of the reciprocal social contract.
- Temporary: Tied to the duration of the declared national emergency, with objective sunset triggers.

2.2 The Mechanism

Funding Source. The Dividend draws from two complementary streams:

a) Windfall Profit Recapture Tax (approximately 40% of total funding): A temporary surcharge on excess profits earned by corporations in energy production, energy trading, and defense contracting during the declared emergency period. "Excess profit" is defined as net income exceeding 120% of the firm's trailing five-year average. This mechanism targets the crisis-amplified margin—not the baseline business—ensuring the industries benefiting most from the disruption fund the stabilization.

b) Patriot Bond Issuance (approximately 60% of total funding): A new class of Treasury securities marketed directly to American citizens and institutions, bearing a competitive yield and branded explicitly as crisis-response instruments. Patriot Bonds serve dual purpose: they finance the Dividend while channeling domestic savings into sovereign instruments rather than speculative assets, providing a counter-inflationary savings vehicle.

Distribution. Monthly deposit via direct deposit, digital wallet, or pre-loaded debit card. The payment amount is indexed to a Crisis Cost Index (CCI)—a composite of fuel, grocery, and housing cost increases relative to the pre-crisis 12-month baseline, targeting 80% offset of the median household's increased essential burden.

Administration. The Dividend leverages existing IRS and Social Security Administration infrastructure for identity verification and payment routing. No new federal agency is required. Smart-city digital payment pilots in 5–10 mid-sized metropolitan areas test efficiency, data collection, and resource allocation optimization in parallel.

SECTION 3: FISCAL FRAMEWORK AND COST MODEL

A credible proposal requires credible numbers. The following model provides back-of-envelope projections grounded in publicly available fiscal data.

3.1 Baseline Assumptions

Parameter	Value
Eligible U.S. adult population	~277 million (2026 est., U.S. Census)
Crisis Cost Index (CCI) offset target	80% of median household increased burden
Estimated monthly CCI (moderate scenario)	$300–$400/month per household
Working dividend amount	$300/month per adult
Emergency duration (planning horizon)	12 months (renewable in 6-month increments)

3.2 Annual Cost Projection

At $300/month: 277 million adults × $300 × 12 months = **approximately $997 billion per year**. For comparative context: the three rounds of COVID-19 Economic Impact Payments (2020–2021) distributed approximately $867 billion in direct payments to individuals. The Patriot Dividend operates at comparable scale but with monthly cadence rather than lump-sum disbursement, providing sustained economic stabilization rather than one-time stimulus.

3.3 Revenue Projections

Windfall Profit Recapture (estimated $100–$160 billion/year). In FY2025, the top five U.S. integrated oil companies (ExxonMobil, Chevron, ConocoPhillips, Phillips 66, Marathon Petroleum) reported combined net earnings exceeding $55 billion under normal market conditions. ExxonMobil alone earned $28.8 billion. A crisis-level energy disruption (Strait of Hormuz-class event) historically doubles or triples energy sector margins. A 50% surcharge on excess profits above the 120%-of-baseline threshold, applied across the top 20 energy producers and top 10 defense contractors (whose combined 2025 net income exceeded $75 billion), conservatively yields $100–$160 billion annually during the crisis window.

Patriot Bond Issuance (estimated $840–$900 billion/year). The remaining balance is financed through sovereign debt issuance. For context, the U.S. Treasury issued approximately $5.4 trillion in net new debt between March 2020 and December 2021 to finance pandemic response. An additional $840–$900 billion in purpose-branded, citizen-marketed bonds represents approximately 16–17% of that precedent—significant but fiscally manageable for a crisis of equivalent severity.

3.4 The Inflation Question

The primary economic objection to any direct transfer program is inflationary pressure. The Patriot Dividend addresses this through three integrated mechanisms:

1. Offset, not stimulus. The Dividend is explicitly designed to offset crisis-induced cost increases, not to inject net new purchasing power. At 80% of CCI, the Dividend replaces lost purchasing power rather than expanding demand beyond pre-crisis levels. The economic function is stabilization, not acceleration.

2. Patriot Bond absorption. The bond issuance component actively removes cash from the economy by channeling domestic savings into sovereign instruments. Every dollar of Patriot Bond purchased by an American household is a dollar withdrawn from consumer markets and redirected into government financing—a counter-inflationary mechanism embedded in the funding structure itself.
3. Essential-goods price stabilization. The ARRES Act (see Section 6) includes authority for temporary price stabilization measures on fuel, groceries, and housing—not Soviet-style price controls, but anti-gouging enforcement with reporting requirements. The Windfall Profit Recapture Tax provides the enforcement incentive: firms that raise prices beyond cost-justified levels face higher effective tax rates.

This three-layer architecture—offset targeting, savings absorption, and price stabilization—ensures the Dividend functions as a shock absorber, not a demand accelerator.

SECTION 4: STRATEGIC OBJECTIVES SOLVED

The Patriot Dividend simultaneously addresses five CORE_ROOT SolutionProblems identified in the ERES framework. Each represents a distinct failure mode; the Dividend resolves all five through a single mechanism.

4.1 The Legitimacy Deficit

Problem	Resolution via Dividend
Citizens do not trust the state to allocate war-era resources wisely.	Citizens receive the resources directly. They control allocation, not the bureaucracy. Trust is rebuilt through tangible reciprocity.
Perception of a crisis benefiting elites while the base absorbs the cost.	Immediate cash flow to every household proves shared benefit. The windfall tax ensures the industries profiting most fund the offset.

4.2 The Demand Destruction Paradox

Problem	Resolution via Dividend
Crisis inflation crushes consumer spending, triggering recessionary spiral.	Dividend maintains baseline aggregate demand. Money flows directly into the real economy: groceries, rent, fuel, medicine.
Industrial mobilization requires a stable domestic economy.	Stable consumer demand keeps domestic supply chains intact, workers employed, and tax revenue flowing.

4.3 The Social Contract Fracture

Problem	Resolution via Dividend
National service or conscription is politically impossible without immediate reciprocity.	The Dividend is the quid pro quo: "You serve or endure; the state pays." Duty becomes a transaction. Service becomes palatable.
Younger generations feel no tangible stake in national stability.	A direct cash stake creates immediate, personal self-interest in the nation's resilience.

4.4 The Inequality Accelerator

Problem	Resolution via Dividend
War-era inflation and corporate windfall profits widen the wealth gap at catastrophic speed.	The Dividend is a universal floor. It prevents the economic base from being wiped out while the top profits. Automatic stabilization.
Inequality-driven rage produces unrest and political violence.	Economic cushioning buys time, social peace, and political space for longer-term solutions.

4.5 The Information Deficit

Problem	Resolution via Dividend
The state needs real-time data to manage crisis resources efficiently.	The Dividend creates a consensual data pipeline. Opting in requires participation in digital payment systems, generating anonymized data on spending patterns, migration, and need.
Direct surveillance is politically toxic and constitutionally fraught.	Data is a byproduct of service delivery, not an act of force. Smart-city infrastructure is framed as efficiency for citizen benefit.

SECTION 5: IMPLEMENTATION ROADMAP

Phase 1: Authorization (Months 1–3)

- Legislative Action: Pass the American Resilience and Reciprocal Emergency Support (ARRES) Act, authorizing the Dividend, the Windfall Profit Recapture Tax, Patriot Bond issuance, and essential-goods price stabilization authority.
- Executive Framing: Launch the public narrative—"You carry the burden. You deserve the share." Position the Dividend as patriotic reciprocity, not entitlement.

- Crisis Cost Index (CCI): Treasury and BLS jointly establish the CCI methodology and publish the first baseline measurement.

Phase 2: Infrastructure (Months 3–6)

- Digital Rails: Expand the FedNow instant-payment system for Dividend distribution. Partner with fintech providers to reach unbanked and underbanked populations via pre-loaded debit cards.
- Smart-City Pilots: Select 5–10 mid-sized metropolitan areas to integrate dividend distribution with urban resource management (energy allocation, transport optimization, food-supply logistics).
- Verification: Build citizen registry cross-referenced with IRS, SSA, and Treasury data. Leverage existing Economic Impact Payment infrastructure from 2020–2021.

Phase 3: Distribution (Month 6+)

- First Payment: Initial Patriot Dividend deposited to all verified accounts.
- Monthly Indexing: CCI recalculated monthly using real-time BLS data on fuel, food, and housing. Dividend amount adjusts automatically—up or down—to maintain the 80% offset target.
- Sunset Clause: Dividend terminates automatically 90 days after ALL of the following conditions are met for 90 consecutive calendar days: (a) national emergency declaration is rescinded; (b) WTI crude oil price returns to within 115% of pre-crisis 12-month average; (c) CPI-measured essential-goods inflation falls below 3.0% annualized. Congress may renew in 6-month increments by majority vote.

SECTION 6: RISK MITIGATION

Risk	Mitigation Strategy
Inflationary Spiral	Three-layer defense: (1) offset targeting at 80% CCI, not net-new demand; (2) Patriot Bond savings absorption removes cash from consumer markets; (3) ARRES Act price stabilization authority with windfall-tax enforcement incentive. See Section 3.4.
Moral Hazard	Reciprocity condition: participation in national service (military, civilian corps, or crisis labor) encouraged via tiered bonus payments. The Dividend is the baseline; service earns more. The structure incentivizes contribution without punishing non-service.
Funding Unsustainability	Triple sunset mechanism: (a) emergency declaration rescission; (b) energy price normalization; (c) essential-goods CPI below 3.0%. All

	three must hold for 90 consecutive days. Congress cannot extend indefinitely without renewed majority vote every 6 months.
Political Perception as Welfare	Strict branding as "Patriot Dividend"—earned through citizenship during crisis, not given as entitlement. Tied explicitly to emergency conditions and shared sacrifice. Windfall tax ensures the perception of fairness: the industries profiting fund the offset.
Data Privacy Concerns	Opt-in structure; anonymized aggregate data only; robust privacy protections codified in ARRES Act with criminal penalties for misuse. No individual-level data shared outside Treasury/IRS payment verification.
Precedent Lock-In	The objective sunset triggers (not discretionary political judgment) determine termination. Historical precedent: wartime price controls (1942–1947) and rationing programs were successfully terminated after V-J Day. The Dividend follows the same logic—crisis instrument, not permanent entitlement.

SECTION 7: HISTORICAL AND OPERATIONAL PRECEDENT

The Patriot Dividend is not without precedent. It synthesizes proven mechanisms from multiple domains:

The Alaska Permanent Fund Dividend (1982–present). The longest-running universal cash dividend in American history. In 2025, each eligible Alaskan received $1,000 from the state's $83 billion sovereign wealth fund, generated by oil revenue. The Alaska model demonstrates that universal, non-means-tested cash transfers are administratively feasible, politically durable across partisan lines, and economically stimulative without generating runaway inflation in a resource-dependent economy. The Patriot Dividend adapts this model from state to federal scale, from permanent to temporary, and from resource-wealth to crisis-response framing.

COVID-19 Economic Impact Payments (2020–2021). Three rounds of direct payments totaling approximately $867 billion reached over 160 million American households within weeks of authorization, using IRS and Treasury infrastructure. This demonstrated that the federal government possesses the administrative capacity to execute universal payments at the scale the Patriot Dividend requires. The infrastructure already exists.

Wartime Economic Stabilization (1942–1947). The Office of Price Administration managed rationing, price controls, and war bonds simultaneously, maintaining domestic economic stability while the nation prosecuted a global conflict. War bonds alone financed approximately $185 billion (equivalent to ~$3.4 trillion in 2026 dollars) of the war effort while

serving as a counter-inflationary savings instrument—precisely the dual function Patriot Bonds are designed to perform.

Keynesian Wartime Finance. John Maynard Keynes's 1940 pamphlet "How to Pay for the War" proposed compulsory savings (deferred pay) combined with direct support for the lowest-income households—a mechanism structurally identical to the Patriot Dividend's combination of bond issuance and direct transfer. The principle is established: during wartime, the state must simultaneously finance the conflict and protect the domestic base.

SECTION 8: ERES FRAMEWORK INTEGRATION

The Patriot Dividend is not an isolated policy proposal. It is one operational expression of the ERES Institute's 28-year New Age Cybernetics (NAC) research program—a civilizational-scale systems architecture built on three governing equations:

Equation	Application to the Patriot Dividend
C = R × P / M	Cybernetics = Resource × Purpose / Method. The Dividend optimizes all three variables: windfall-recaptured Resource, clear national-resilience Purpose, and lean direct-transfer Method. When M (institutional friction) approaches zero, system output maximizes.
M × E + C = R	Matter × Energy + Constant = Reason. The material reality of crisis-era economics (M×E) plus the constant of human dignity (C) must equal a system that makes sense (R). The Dividend is the operational expression of Reason under duress.
REAL = (E·M·R) / (T·S)	Energy · Matter · Resonance / Time · Space. The Dividend collapses T (time-to-relief) and leverages digital infrastructure to collapse S (geographic barriers), maximizing the Resonance between state action and citizen survival.

Within the broader ERES architecture, the Patriot Dividend serves as the **emergency-deployment mode of UBIMIA** (Universal Basic Income Meritcoin Incentive Architecture)—the ERES economic framework that replaces means-tested welfare with merit-tracked, universally accessible resource distribution. UBIMIA operates in steady-state through the SCALULAR certification system (Scalable Certification Architecture for Lifelong Universal Learning and Adaptive Resilience). The Patriot Dividend is UBIMIA activated under crisis conditions: the same principles, the same digital infrastructure, the same philosophical commitment to reciprocal contract—accelerated to match the velocity of the threat.

The Dividend also connects directly to the four national opportunities presented to the White House in the companion ERES briefing document:

4. BORDERS: The Dividend's digital verification infrastructure strengthens the citizen registry that underpins sovereign border management.
5. SPACE DOMINANCE: National resilience secures the domestic base required to sustain long-horizon strategic investments like the ERES Vibration Resonance Drive.
6. GOVERNANCE (NPR/DOGE): The Dividend's lean administrative model—leveraging existing infrastructure, no new bureaucracy—is Non-Punitive Remediation in action. It fixes without demolishing.
7. STORM PARTY: The Dividend's reciprocal contract is the economic expression of EarnedPath—citizenship as verifiable contribution, not passive entitlement.

SECTION 9: CONCLUSION

The ERES Patriot Dividend is not an ideological commitment to Universal Basic Income. It is a strategic stabilizer for a nation under compound stress. It solves the CORE_ROOT problem of legitimacy by making the state's survival synonymous with the citizen's survival.

In an era where trust is the most depleted resource, the Dividend buys trust with cash—and uses that trust to build the data infrastructure, social cohesion, and economic resilience necessary to endure a prolonged crisis.

> *Without the Dividend: The state asks for blood and treasure while the citizen bleeds out at the grocery pump. The system fractures.With the Dividend: The state says: "The crisis is real. The burden is shared. And you will see your share, in your account, every month, for as long as we ask you to bear it."That is the only contract that holds.*

Three principles have governed this work from the beginning:

> *Don't hurt yourself. Don't hurt others. Build for generations to come.*

That is the foundation of New Age Cybernetics. That is the foundation of the Patriot Dividend. That is the foundation of a great America.
