ERES Trilogy — MIT Press Outreach Package

Document ID: ERES-MITPRESS-OUTREACH-2026-001-v2 **Author:** Joseph Allen Sprute, Founder and Director, ERES Institute for New Age Cybernetics **Date:** April 27, 2026 **Purpose:** Sequenced cold-outreach inquiries to MIT Press acquisitions editors regarding the ERES Trilogy (*One-Good* / *Security-Clearance* / *Data-Integrity*) — together forming the Engine of the ERES PlayNAC Simulator — grounded in the *ERES UBIMIA Manual* (v1.1, 188-page Reference Architecture, April 25, 2026) which supplies the partial instruction-set for building the Engine, plus the broader ERES Library (600+ documents). **Status:** v2 — Engine / partial-instruction-set framing applied across all three letters. Draft for sender review; edit signature block before sending. **Supersedes:** v1 (April 26, 2026)

Section I — MIT Press Contact Protocol (Verified)

The MIT Press does not accept full proposals or manuscripts on first contact. The verified procedure is:

1. Send a **brief inquiry** (a few paragraphs) by email or post to the appropriate acquisitions editor.
2. The inquiry should describe the project, the author, and the reasons for writing the book.
3. Do **not** attach manuscripts, sample chapters, or files unless specifically invited.
4. If interested, the editor will request a full proposal and sample chapters.

AI disclosure. MIT Press policy (current as of 2026) requires that any substantive use of AI tools be transparently disclosed to the editor and in the manuscript itself. AI systems cannot be listed as authors. The MIEVM methodology must be disclosed in the inquiry letter — disclosed cleanly, it strengthens rather than weakens the submission, because the methodology is author-designed and the author retains full responsibility for the work.

Section II — Targeting Strategy

Approach editors **sequentially**, not simultaneously. Cold-contacting multiple editors at the same press in parallel is poor form and tends to result in coordinated declines.

Primary target — Justin Kehoe *Acquisitions Editor, Science, Technology & Society (STS), MIT & Regional Interest* The Trilogy's natural disciplinary home. STS is where cybernetics-as-governance, technology-and-society architecture, and constitutional-design-meets-systems-theory live at MIT Press. This is the lineage of Wiener, Beer's Viable System Model, Cybersyn, and contemporary algorithmic-governance work. Lead here.

Secondary target (escalate if no response in 4–6 weeks) — Gabriela Bueno Gibbs *Acquisitions Editor, Environmental and Political Science* Strong fit on the constitutional-architecture and ecological-governance dimensions: Four Constitutional Pillars, DOFA as proposed fourth branch, the Nation-as-Smart-City frame, the Coalescence imperative, the 1,000-year covenant. Her background in environmental law strengthens this angle.

Tertiary target (escalate if still no traction) — Catherine Woods *Executive Editor, Economics, Finance, Business* Strong fit on the economic-architecture angle: UBIMIA, Patriot Dividend v4.0, Meritcoin (Proof-of-Resonance), Bio-Ecologic Economy, KERNEL. Lead here only if STS and Environmental/Political do not respond — the economic frame works as backup positioning rather than as the lead pitch for a Trilogy this architecturally broad.

Section III — Verified Contact Reference Card

Role	Name	Title	Email
Primary editor	Justin Kehoe	Acquisitions Editor, STS / MIT & Regional Interest	Retrieve from live MIT Press acquisitions page
Secondary editor	Gabriela Bueno Gibbs	Acquisitions Editor, Environmental and Political Science	Retrieve from live MIT Press acquisitions page
Tertiary editor	Catherine Woods	Executive Editor, Economics, Finance, Business	Retrieve from live MIT Press acquisitions page
Assistant (Economics area, route to Woods)	Caroline Helms	Acquisitions Assistant, Economics/Finance/Business + Neuroscience	crhelms@mit.edu *(verified)*
Assistant (CS / Education area, not used here)	Jess Man	Acquisitions Assistant, CS + Education and Learning, Science Fiction	manje25@mit.edu *(verified)*
Editorial Director (escalation contact)	Janice Audet	Editorial Director; also Trade Science / Biomedical Science	Retrieve from live MIT Press acquisitions page

Live page for direct editor emails: https://mitpress.mit.edu/about/acquisitions-staff/

The page lists each editor with a direct email link. I recommend opening the page, copying the email for Kehoe (and, when sequencing forward, Bueno Gibbs and Woods), and using those rather than guessing at the address pattern.

Section IV — Letter 1 (PRIMARY — to Justin Kehoe, STS)

Subject: Inquiry — three-volume project at the intersection of cybernetics, constitutional design, and governance

Dear Mr. Kehoe,

I write to inquire about MIT Press's interest in a three-volume scholarly project that I believe sits within the Press's Science, Technology & Society list. The project is the ERES Trilogy — *One-Good*, *Security-Clearance*, and *Data-Integrity* — and it is the scholarly synthesis of a cybernetic governance architecture I have been developing as Founder and Director of the ERES Institute for New Age Cybernetics since 2012. The three volumes together form the Engine of the ERES PlayNAC Simulator — the operational governance-simulation system the architecture is designed to drive — and the scholarly volumes are how that Engine becomes legible to peer review.

The Trilogy rests on settled Sociocratic architecture. Its substrate is the *ERES UBIMIA Manual: Constitutional Pillars and Operational Pilot Guide* (v1.1, April 2026), a 188-page Reference Architecture that supplies the partial instruction-set for building the Engine — establishing Four Constitutional Pillars (Bioenergetic Imperative, Trajectory, SELF/$ELF Balance, Marriage at Heart) and a Nation-as-Smart-City deployment model. Each Trilogy volume articulates one dimensional axis of the architecture: *One-Good* engages Border (Marriage, Sovereignty, Terrorism) along the BEST/Capitalism rigor of the Sociocratic Overlay Metadata Tapestry; *Security-Clearance* engages Law (Material, Dimension, Use) along the SOUND/Communism axis; *Data-Integrity* engages Currency (Water, Immigration, Security) along the GOOD/Commonwealth axis. The three volumes are projections of one architecture — three faces of a single Engine — rather than three independent monographs, which is the principal reason a Trilogy submission is the right form rather than a single monograph.

The body of work behind the Trilogy includes 420+ publications on ResearchGate, an ERES Library exceeding 600 documents (whitepapers, governance frameworks, formal filings — including a March 2026 submission to The Hague establishing intellectual priority for several constitutional proposals), and a parallel operational implementation track that makes the architecture deployable rather than merely descriptive. All work is released under the CARE Commons Attribution License v2.1.

In keeping with MIT Press's policy on AI tools, I should disclose at the outset that my development methodology — the Multi-Instrument Ensemble Validation Method (MIEVM) — uses Claude, DeepSeek, Grok, and ChatGPT (primarily) as parallel validation nodes against my own architectural specifications. I author the work and assume full responsibility for it; the AI systems are validation instruments, not co-authors, and I document this methodology transparently in the manuscript material.

I would welcome the opportunity to send you the *ERES UBIMIA Manual* and a draft Trilogy prospectus on request. If STS is not the appropriate home for this proposal, I would be grateful for a redirection to the colleague best positioned to evaluate it.

With respect,

Joseph Allen Sprute

Section V — Letter 2 (SECONDARY — to Gabriela Bueno Gibbs, Environmental and Political Science)

Subject: Inquiry — three-volume project on constitutional architecture and ecological governance

Dear Ms. Bueno Gibbs,

I write to inquire whether the Environmental and Political Science list at MIT Press might be the appropriate home for a three-volume project at the intersection of constitutional design, ecological governance, and political science. The project is the ERES Trilogy — *One-Good*, *Security-Clearance*, and *Data-Integrity* — emerging from work I have been developing as Founder and Director of the ERES Institute for New Age Cybernetics since 2012. The three volumes together form the Engine of the ERES PlayNAC Simulator — the operational governance-simulation system the architecture is designed to drive — and the scholarly volumes are how that Engine becomes legible to peer review.

The Trilogy rests on a v1.1 Reference Architecture I completed this April: the *ERES UBIMIA Manual: Constitutional Pillars and Operational Pilot Guide*, a 188-page document supplying the partial instruction-set for building the Engine. The Manual proposes Four Constitutional Pillars and a Nation-as-Smart-City deployment model in which each nation enters a 1,000-year covenant with three specified pathways (Contract, Consolidate Size, or Consolidate to Another Nation via Family Amity). It also formally proposes the Department of Family Amity (DOFA) as a fourth branch of governance — the only branch operating at every scale at once, from household through interplanetary deployment. DOFA's intellectual priority is established through a March 2026 filing with The Hague.

The three Trilogy volumes articulate the architecture along distinct axes: *One-Good* engages Border (sovereignty, marriage, terrorism); *Security-Clearance* engages Law (material,

dimension, use); *Data-Integrity* engages Currency (water, immigration, security). Together they are three faces of a single Engine rather than three independent monographs. The architecture's deepest force, treated extensively in the Manual and load-bearing throughout the Trilogy, is what we call the Coalescence imperative — the bioenergetic logic that robotics and ecological collapse jointly impose on humanity, recognizing all life as the only treatment compatible with our own continued existence. This places the work directly in the political-and-environmental conversation about governance under planetary-boundary constraints.

The supporting body of work includes 420+ publications on ResearchGate, an ERES Library exceeding 600 documents, and an operational implementation track running parallel to the scholarly volumes. All work is released under the CARE Commons Attribution License v2.1.

Per MIT Press policy on AI tools, I should disclose that my development methodology — the Multi-Instrument Ensemble Validation Method (MIEVM) — uses Claude, DeepSeek, Grok, and ChatGPT (primarily) as parallel validation nodes against my own architectural specifications. I author the work and assume full responsibility; the AI systems are validation instruments, transparently documented in the manuscript.

I would welcome the opportunity to send you the *ERES UBIMIA Manual* and a draft Trilogy prospectus on request, or to be redirected to the colleague best positioned to evaluate the project.

With respect,

Joseph Allen Sprute

Section VI — Letter 3 (TERTIARY — to Catherine Woods, Economics, Finance, Business)

Subject: Inquiry — three-volume project proposing an alternative economic architecture grounded in cybernetic governance

Dear Ms. Woods,

I write to inquire whether the Economics, Finance, and Business list at MIT Press might be a suitable home for a three-volume project that proposes a comprehensive alternative economic architecture grounded in cybernetic governance. The project is the ERES Trilogy — *One-Good*, *Security-Clearance*, and *Data-Integrity* — developed at the ERES Institute for New Age Cybernetics, which I founded in 2012. The three volumes together form the Engine of the ERES

PlayNAC Simulator — the operational governance-and-economic-simulation system the architecture is designed to drive — and the scholarly volumes are how that Engine becomes legible to peer review.

The economic core of the architecture is UBIMIA — Universal Basic Income, Merit, Investment, and Allocation — paired with Meritcoin (a proof-of-resonance instrument rather than proof-of-work) and a Bio-Ecologic Economy operating through what I call the KERNEL: a Global Actuary Investor Authority that holds the planetary actuarial-investor function. The Patriot Dividend (currently in its v4.0 whitepaper iteration) sits beneath UBIMIA as a transitional implementation layer. The architecture is non-utopian about transition: UBIMIA explicitly commits to a 1,000-year trajectory toward equality of standing, with the merit layer constitutionally committed to its own dissolution as the trajectory completes.

The three Trilogy volumes engage distinct dimensions of the architecture — three faces of a single Engine. The *Data-Integrity* volume in particular treats Currency as the substance whose flow must be auditable across Border, Law, and the Constitutional Pillars — making it the volume most directly relevant to Economics, Finance, and Business readers, even though the Trilogy as a whole crosses STS and political science as well. The full architecture is set out in the *ERES UBIMIA Manual: Constitutional Pillars and Operational Pilot Guide* (v1.1, April 2026), a 188-page Reference Architecture supplying the partial instruction-set for building the Engine.

Supporting evidence includes 420+ publications on ResearchGate, an ERES Library exceeding 600 documents (the Patriot Dividend v4.0, the GAIA Stack, the SCALULAR economic certification architecture, and the Equity Covenant among them), and a Hague filing establishing intellectual priority. All work is released under the CARE Commons Attribution License v2.1.

In compliance with MIT Press's AI tools policy, I should disclose that my development methodology — the Multi-Instrument Ensemble Validation Method (MIEVM) — uses Claude, DeepSeek, Grok, and ChatGPT (primarily) as parallel validation nodes against my own architectural specifications. I author the work and assume full responsibility; the AI systems are validation instruments, fully and transparently documented.

I would welcome the opportunity to send you the *ERES UBIMIA Manual* and a draft prospectus on request. Routing through your acquisitions assistant Caroline Helms (crhelms@mit.edu) is also possible if that is preferable.

With respect,

Joseph Allen Sprute
Founder and Director
ERES Institute for New Age Cybernetics

[phone number, optional]

Section VII — Follow-Up Timing and Etiquette

- **Send Letter 1 (Kehoe)** as the opening move. Email is preferable to post; subject line as drafted.
- **Wait 4–6 weeks before any follow-up.** University press editors carry heavy submission queues; faster follow-up reads as pressure.
- **If no response by week 6:** send a single brief follow-up to Kehoe (one paragraph: "Following up on my April [date] inquiry — would welcome a brief indication of fit or redirection"). One follow-up only; do not stack.
- **If no response to follow-up by week 10:** send Letter 2 to Bueno Gibbs. Do **not** mention the prior outreach to Kehoe — let each inquiry stand on its own footing.
- **If Letter 2 likewise produces no traction by week 16:** send Letter 3 to Woods, again as a fresh inquiry.
- **Escalation backstop:** if all three sequential approaches yield silence, the Editorial Director (Janice Audet) is the appropriate final contact, framed as a brief note asking for guidance on whether the Press is the right home and, if so, who is best positioned to evaluate the project.

The full sequence, run with discipline, is approximately a four-month window. That pace matches MIT Press's own review tempo and protects the project's standing rather than spending it.

Section VIII — What to Hold in Reserve

For when an editor responds with interest and requests more material, prepare in advance:

1. **The Manual** (`ERES-UBIMIA-MANUAL-2026-001-v1.1`) as the architectural reference.
2. **A formal Trilogy prospectus** of approximately 5,000 words covering: (a) project description, (b) chapter-by-chapter outline for each of the three volumes, (c) competitive landscape and positioning, (d) intended audience, (e) author qualifications and prior work, (f) length and timeline estimates, (g) MIEVM methodology disclosure with technical detail.
3. **Author CV** highlighting the 424 ResearchGate publications, the ERES Library, the Hague filing, and the institutional history.

4. **Two sample chapters** (one from *One-Good*, one from *Data-Integrity* recommended — they bracket the Trilogy's range and let an editor see both ends of the architectural span).

None of this is sent on first contact. All of it should be ready to send within 48 hours of an editor request.

End of MIT Press outreach package. CCAL v2.1.
