ERES Institute GEAR: Global Earth Applications Recorder — PlayNAC EP GERP SOMT | VERTECA SECUIR CyberRAVE Gunnysack SaleBuilders Ontology

Description

GEAR (Global Earth Applications Recorder / Global Earth Application Register) is an open-source planetary recording and registry framework developed by the ERES Institute for New Age Cybernetics (est. February 2012, Bella Vista, Arkansas). GEAR functions as the state-capture engine within the PlayNAC ecosystem, recording Earth resource applications and activities as cryptographically hashed SOMT (Sociocratic Overlay Metadata Tapestry) snapshots anchored to the 1000-Year Future Map.

GEAR operates within a defined enablement chain: SECUIR (Silent Energy Circular Universe Infinite Rotation) establishes security clearance and integrity verification, which enables GEAR, which in turn enables NRP (Natural Resonance Processing). This SECUIR → GEAR → NRP progression ensures that planetary-scale recording is gated by verified participant integrity before advanced resonance-based computation is unlocked.

Central to the framework is BEE (Bio-Ecologic Economy), the ecological-economic feedback system that integrates biometric verification with User-GROUP Service Level Agreements to produce comprehensive sustainability scoring. BEE monitors biodiversity, soil health, water quality, air purity, energy efficiency, waste circularity, and climate resilience — generating the ecological indicators that feed NBERS (National Bio-Ecologic Resource Score) and the PBJ Tri-Codex (PERC × BERC × JERC) ratings. BEE is materially instantiated through the four SECUIR infrastructure technologies: THOW (Tiny Homes On Wheels) — modular sustainable housing built from recycled materials with integrated Aura-Technology and bottom-up/top-down Bio-Ecologic Economy; HFVN (Hands-Free Voice Navigation) — the H2C/C2H (Human-to-Computer, Computer-to-Human) communications system providing 4D interface access for VERTECA vertical technologies; FDRV (Fly & Dive RV) — multi-modal transportation embodying "Spaceship Economy" closed-loop systems and spaceship futures; and GSSG (Green Solar-Sand Glass) — graphene-infused infrastructure enabling communications, comfort, environmental regeneration, and stacked-energy integration. Together, THOW + HFVN + FDRV + GSSG create economies-of-scale and force-multiplication with BEE's biometric-ecological feedback loop, forming the physical substrate for the Earth Defense Federation (EDF) coordinated through GAIA SOMT GEAR at La Grange Points — the gravitational equilibrium positions where planetary-scale infrastructure achieves stable orbital coordination, mirroring the cybernetic equilibrium of C = R × P / M at civilizational scale.

The PlayNAC integration layer connects three core subsystems through GEAR: EarnedPath (EP = CPM × WBS + PERT), the competency-based progression system governing lifelong credentialing; GERP (Global Earth Resource Planner), the planetary-scale enterprise resource

planning engine for allocation optimization across 72 CyberRAVE vertical industry domains; and SOMT, the consent-based sociocratic governance metadata layer that records relationship graphs, bio-energetic states, and decision provenance across fractal scales (Household → Neighborhood → Municipal → Bioregional → Planetary).

The ontological architecture nests five ERES frameworks as a stacked lattice: VERTECA (Hands-Free Vertical-Industries Environment) provides the 4D+ VR/AR simulation and voice-navigation interface; SECUIR delivers circular energy infrastructure, access authorization, and the four physical technologies (THOW, HFVN, FDRV, GSSG); CyberRAVE (Conscious Reality Assessment Verification Evolution) supplies the 72-industry ratings framework and virtual environment substrate; Gunnysack (Graceful Universal Nurture Network Yielding Sustainable Abundance Centered Knowledge) manages bundled goods and services exchange across monetary, barter, and gift modalities; and SaleBuilders (Systemic Agreement Lattice Elevating Builders) delivers the four development pillars — Health, Law, Protection, and Skill-Trade — aligning with SCALULAR's certification architecture (SSHP, SSLA, SSPS, SSST).

Biometric identity is established through FAVORS (Fingerprint, Aura, Voice, Odor, Retina, Signature), defining six degrees of separation across the CBGMODD stakeholder taxonomy (Citizen, Business, Government, Military, Ombudsman, Dignitary, Diplomat). FAVORS enables BEE, which feeds UBIMIA (Universal Basic Income Merit Investment Awards) and GCF (Graceful Contribution Formula) through the BERC (Bio-Ecologic Ratings Codex).

The Finance Matrix is operationalized through SROC (Smart-Resonant Offset Contracts) — cybernetically governed agreements that bind land stewardship, resource flows, and economic exchange to the 1000-Year Future Map's viability constraints. SROCs are not conventional smart contracts; their terms, execution, and outcomes are continuously validated against the ARI/RHC loop to confirm alignment with civilizational-scale sustainability. SROC value is dynamically modulated by resonance metrics: SROC_value = baseline × f(ARI, ERI), creating direct incentives for bio-ecological alignment. SROCs compile against three subject-matter constraints — NBERS (bio-ecologic rating), UBIMIA (merit-based income distribution), and Gracechain (cryptographic ledger with Proof-of-Resonance consensus) — with deviation triggering Non-Punitive Remediation (NPR) offset pathways rather than penalty. Game-theoretic equilibrium analysis demonstrates that cooperation dominates defection across multi-generational horizons when SROCs are anchored to the How = International Land Ownership Reference (Personal/Public-Private stewardship classes mapped to C = R × P / M).

GEAR records are validated through MIEVM (Multi-Instrument Ensemble Validation Method) and measured via the four BERA Resonance Indices (ARI, ERI, RHC, RCI), with Meritcoin value accrual operating on Proof-of-Resonance — ethical and ecological harmony in, economic value out. The foundational cybernetic equation C = R × P / M (Cybernetics = Resource × Purpose ÷ Method) governs all system interactions.

Glossary

ARI — Aura Resonance Index. One of four BERA Resonance Indices measuring absorption/wellbeing outcomes.

BEE — Bio-Ecologic Economy. Ecological-economic feedback system integrating biometric verification with User-GROUP SLAs for comprehensive sustainability scoring.

BERC — Bio-Ecologic Ratings Codex. Environmental impact ratings and ecological resilience certification; one of the three PBJ Tri-Codex components.

BERA — Bio-Energetic Resonance Analysis. Measurement framework producing four Resonance Indices (ARI, ERI, RHC, RCI).

C = R × P / M — Cybernetics = Resource × Purpose ÷ Method. Foundational ERES cybernetic equation governing all system interactions.

CBGMODD — Citizen, Business, Government, Military, Ombudsman, Dignitary, Diplomat. Seven-tier stakeholder taxonomy defining societal roles and governance layers.

CCAL — CARE Commons Attribution License v2.1. Regenerative open-source license governing ERES framework use with attribution, non-exploitation, transparency, and regenerative mandates.

CPM — Critical Path Method. Standard project management technique for identifying critical activity sequences; component of the EarnedPath formula.

CyberRAVE — Conscious Reality Assessment Verification Evolution. The 72-industry ratings framework and virtual environment substrate. (Original definition: Remote Access Virtual Environment.)

EDF — Earth Defense Federation. Coordinating governance structure for planetary-scale human sustainability, enabled by the SECUIR infrastructure quartet.

EP — EarnedPath. Competency-based progression system. Formula: EP = CPM × WBS + PERT.

ERES — Empirical Realtime Education System. The parent institute and framework for New Age Cybernetics, est. February 2012, Bella Vista, Arkansas.

ERI — Emission Resonance Index. One of four BERA Resonance Indices measuring emission/environmental health.

FAVORS — Fingerprint, Aura, Voice, Odor, Retina, Signature. Six-modal biometric identity system defining six degrees of separation across the CBGMODD stakeholder taxonomy.

FDRV — Fly & Dive RV. Multi-modal transportation embodying "Spaceship Economy" closed-loop systems and spaceship futures. One of four SECUIR infrastructure technologies.

Finance Matrix — The ERES economic coordination architecture operationalized through SROC (Smart-Resonant Offset Contracts), integrating Meritcoin, Gracechain, UBIMIA, GCF, NBERS, and BERC into a unified cybernetic finance system where value accrual is governed by Proof-of-Resonance rather than extractive capital.

GAIA — Global AI Assistance / Global Resource Coordination Network. Planetary-scale AI coordination layer for resource management and governance.

GCF — Graceful Contribution Formula. Merit-based contribution measurement feeding BERC ratings.

GEAR — Global Earth Applications Recorder / Global Earth Application Register. Planetary recording and registry framework; state-capture engine within PlayNAC. Enabled by SECUIR; enables NRP.

GERP — Global Earth Resource Planner. Planetary-scale enterprise resource planning engine for allocation optimization across 72 CyberRAVE vertical industry domains.

GSSG — Green Solar-Sand Glass. Graphene-infused infrastructure enabling communications, comfort, environmental regeneration, and stacked-energy integration. One of four SECUIR infrastructure technologies.

Gunnysack — Graceful Universal Nurture Network Yielding Sustainable Abundance Centered Knowledge. Bundled goods and services exchange system across monetary, barter, and gift modalities.

Gracechain — Biometric blockchain secured by Proof-of-Resonance consensus. Records SROC execution, contribution attestations, and merit-credit tracking with cryptographic finality. One of three subject-matter constraints governing all SROCs.

H2C / C2H — Human-to-Computer / Computer-to-Human. Bidirectional communications protocol underlying HFVN.

HFVN — Hands-Free Voice Navigation. H2C/C2H communications system providing 4D interface access for VERTECA vertical technologies. One of four SECUIR infrastructure technologies.

How = ILO — How = International Land Ownership Reference. ERES foundational land governance triad (Personal/Public-Private stewardship classes) anchoring SROCs to the 1000-Year Future Map. Specified in ERES-HOW-ILO-2026-001.

JERC — Justice-Ethics Resonance Codex. Ethical alignment and justice system coherence ratings; one of three PBJ Tri-Codex components.

La Grange Points — Gravitational equilibrium positions where planetary-scale infrastructure achieves stable orbital coordination; applied as metaphor and literal target for EDF coordination through GAIA SOMT GEAR.

Meritcoin — Merit-based cryptocurrency operating on Proof-of-Resonance. Value accrual driven by BERA Resonance Indices: ethical and ecological harmony in, economic value out.

MIEVM — Multi-Instrument Ensemble Validation Method. Structured epistemological protocol deploying parallel AI validation nodes (Claude, Grok, DeepSeek, ChatGPT) for cross-instrument verification.

NAC — New Age Cybernetics. The overarching paradigm for millennial-scale civilizational transformation, active since 1997.

NBERS — National Bio-Ecologic Resource Score. Country-level aggregate measure of ecological sustainability, resource management, and environmental policy effectiveness; successor to GDP.

NPR — Non-Punitive Remediation. The ERES structural response to coherence deviation. When SROCs detect deviation from green-band metrics, NPR offset pathways restore the system rather than penalize actors. Remediation over punishment.

NRP — Natural Resonance Processing. Advanced processing framework aligned with natural resonance patterns. Enabled by SECUIR → GEAR.

PBJ Tri-Codex — PERC × BERC × JERC. Comprehensive environmental and ethical rating system integrating Personal, Bio-Ecologic, and Justice-Ethics dimensions.

PERC — Personal Energy Resonance Codex. Personal ecologic ratings and individual energy resonance metrics; one of three PBJ Tri-Codex components.

PERT — Program Evaluation Review Technique. Time estimation methodology; component of the EarnedPath formula.

PlayNAC — New Age Cybernetic Game Theory. Gamified civic engagement and real-world simulation engine integrating merit-based progression with collective reasoning.

Proof-of-Resonance — Meritcoin consensus mechanism. Replaces Proof-of-Work; the four BERA Resonance Metrics (ARI, ERI, RHC, RCI) feed directly into value accrual as a closed feedback loop. "It's not mining — it's tuning."

RCI — Resonant Continuity Index. One of four BERA Resonance Indices. Formula: RCI = P_Ω_norm × ARI_sys × VibConst. Co-developed with Jimmy D. Butzbach's Continuity Theory.

RHC — Resonant Harmony Cycle. One of four BERA Resonance Indices measuring ARI/ERI feedback loop coherence driving civilizational harmony.

SaleBuilders — Systemic Agreement Lattice Elevating Builders. Delivers four development pillars: Health, Law, Protection, and Skill-Trade.

SCALULAR — Scalable Certification Architecture for Lifelong Universal Learning and Adaptive Resilience. Four certification pillars: SSHP (Health), SSLA (Law), SSPS (Protection), SSST (Skills/Trade). Tier 1 baseline: SSSC (Solid-State Smart-City Citizen).

SECUIR — Silent Energy Circular Universe Infinite Rotation. Security clearance and circular energy infrastructure framework. Delivers four physical technologies (THOW, HFVN, FDRV, GSSG). Enablement chain: SECUIR → GEAR → NRP.

SLA — Service Level Agreement. User-GROUP performance standards defining industry-specific service guarantees within BEE.

SOMT — Sociocratic Overlay Metadata Tapestry. Consent-based governance metadata layer recording relationship graphs, bio-energetic states, and decision provenance across fractal scales (Household → Neighborhood → Municipal → Bioregional → Planetary).

SSHP — SCALULAR Health pillar.

SSLA — SCALULAR Law pillar.

SSPS — SCALULAR Protection pillar.

SSSC — Solid-State Smart-City Citizen. SCALULAR Tier 1 baseline credential.

SSST — SCALULAR Skills/Trade pillar.

SROC — Smart-Resonant Offset Contract. Cybernetically governed agreement binding land stewardship, resource flows, and economic exchange to the 1000-Year Future Map. Continuously validated against ARI/RHC loop. Formula: SROC_value = baseline × f(ARI, ERI). Compiles against three constraints: NBERS, UBIMIA, and Gracechain. Deviation triggers NPR offset

pathways. Game-theoretic equilibrium analysis demonstrates cooperation dominates defection across multi-generational horizons. Central mechanism of the Finance Matrix.

THOW — Tiny Homes On Wheels. Modular sustainable housing built from recycled materials with integrated Aura-Technology and bottom-up/top-down Bio-Ecologic Economy. One of four SECUIR infrastructure technologies.

UBIMIA — Universal Basic Income Merit Investment Awards. Merit-based universal income system delivered "relatively free" via SCALULAR certification and BEE ecological feedback.

User-GROUP — Stakeholder categories operating under SLAs within the BEE and CyberRAVE frameworks.

VERTECA — Hands-Free Vertical-Industries Environment. 4D+ VR/AR simulation and voice-navigation interface for vertical technologies.

WBS — Work Breakdown Structure. Project decomposition methodology; component of the EarnedPath formula.

1000-Year Future Map — Millennial-scale civilizational planning horizon anchoring all GEAR recordings and ERES governance frameworks.
