

ERES-PELLIS Corpus: Version Definition

Define Before Publishing

Author: Joseph A. Sprute (ERES Maestro) **ORCID:** 0000-0001-9946-3221 **Date:** June 14, 2026 **Document ID:** ERES-VERSION-2026-001 **Status:** DEFINITION — to be locked before Zenodo deposit **License:** CCAL v2.1

What This Document Does

This document defines, precisely and in advance, what **v1.0** of the ERES-PELLIS corpus contains, what it does NOT contain, and what gates must be passed before any subsequent version may be published. It is a pre-publication version contract — the equivalent of a pre-registration, but for the corpus itself.

Nothing in this corpus is published until this definition is signed off by the author (JAS).

Version: v1.0 — Q3 2026

Version label

ERES-PELLIS Corpus v1.0 — Protocol + Artifacts (June 14, 2026)

Zenodo DOI structure

- **Concept DOI (permanent, always points to latest):** 10.5281/zenodo.20010116
 - **This version DOI (v1.0):** to be assigned at time of deposit
 - **Living Archive DOI (superseding draft):** 10.5281/zenodo.20583261
-

What v1.0 CONTAINS

The following artifacts are locked into v1.0. No artifact in this list may be modified after deposit.

Tier 1 — Protocol documents (external-facing, Pellis-ready)

Document	Version	Status
ERES-PELLIS Protocol	v0.2.1	FINAL for this corpus version
ERES-BERA-2026-001 Indices Spec	v1.1 (D(t) gates + D(t) locked)	FINAL
ERES-RESONANCE-PROTOCOL-2026-001	v1.0	FINAL
Technical Simulation Specification for Pellis/UoI	v1.0 (June 14, 2026)	FINAL
ERES-PELLIS As-Is/Bridge/To-Be Analysis	v0.3 (Pellis-facing, stripped of ERES-JAS internal layer)	FINAL

Tier 2 — Analysis instruments (executable)

Artifact	Version	Status
ERES_PELLIS_Q0_Q1_Q2_analysis_stub.py	v1.1 (filled stubs: coherence, bootstrap CI, surrogate test)	FINAL
PSCI-hat specification	v1.0 (Use.ai Pellis-aligned variant; weights $w = (0.25, 0.35, 0.15, 0.25)$)	FINAL
Q1 preregistration text (critical vs. linear, $WAIC \geq 4$ decision rule)	v1.0	FINAL
Q2 preregistration text ($\epsilon_{eq} = 0.10$, blind equivalence test)	v1.0	FINAL

Tier 3 — Governance and transparency artifacts

Artifact	Version	Status
ERES Advance Danger Notice (ADN_LLM_2.md)	June 14, 2026	FINAL (MIEVM record complete: Claude + DeepSeek + Grok + Use.ai)

Artifact	Version	Status
Science_FAIR Assessment and Draft	June 14, 2026	FINAL
Negative result paper template	v1.0	FINAL (pre-written; fill brackets only if H2 fails)
Pre-registration template (OSF/AsPredicted format)	v1.0	FINAL

Tier 4 — Correspondence templates (outbound, not yet sent)

Artifact	Status
Cover email to Stergios Pellis (sterpellis@gmail.com) re: simulation request	READY — not sent until simulation specification confirmed
Q2 evaluation request email	READY — not sent until H1/H2/H4 pass
30-day follow-up email	READY

What v1.0 does NOT CONTAIN

The following are explicitly excluded from v1.0. Their absence is deliberate, not accidental.

Excluded item	Reason
Human physiological data (D(t), C(t) time series)	Not yet collected. Inclusion would require Q0 to have passed.
Simulation output (gap closure → coherence monotonicity)	Not yet run. Requires Pellis/UoI or Google Colab execution.
v_phys estimate	Not yet computed. Requires human data + analysis stub execution.
v_Pellis reference value	Must be extracted from Pellis 2026 §16, Table 2 — not yet inserted.
OSF/AsPredicted registration ID	Not yet registered. Must be obtained before data collection.
Q2 verdict (PASS/FAIL)	Not yet issued. Cannot be self-issued per Protocol §12.
MIEVM Refusal Record (formal deposited artifact)	Not yet created as a standalone deposited document. Exists implicitly in ADN_LLM_2 but must be extracted and deposited formally before any isomorphism claim.
MyWay_Final / ERES-JAS internal framework materials	Intentionally excluded from external-facing deposit. Internal use only.

What Must Happen Before v2.0 (Q4 2026)

v2.0 is the RESULTS version. It is published only when:

Gate	Criterion	Authority
Simulation pre-test	S1 ($\rho > 0.90$), S2 (v_{est} within ε_{eq}), S3 (surrogate $p < 0.01$) all pass	Pellis/UoI or independent physicist — NOT the author
OSF pre-registration	Registered with ID, before data collection	OSF/AsPredicted
Q0 identifiability	CV < 10% across 3 baselines	Analysis stub output
Q1 critical decay	$\Delta WAIC \geq 4$, surrogate firewall clear	Analysis stub output
Q2 exponent correspondence	$\varepsilon_{eq} = 0.10$; issued by Pellis or independent analyst	NOT self-issued

If simulation pre-test FAILS → v2.0 contains the negative simulation result + proxy revision plan. Human data is NOT collected until simulation passes.

If human protocol H2 FAILS → v2.0 contains the pre-written negative result paper (fill brackets only). No H3/Q2 evaluation is requested.

Controlled Vocabulary (binding in all v1.0 documents)

The following single-valued term assignments apply across all artifacts in this corpus. No term may carry dual meanings.

Symbol	Canonical term	Retired aliases
$L(t)$	Operator	generator, flow-operator
$\psi(t)$	State trajectory	signal-state, wavefunction
$\sigma(L)$	Spectrum	eigen-structure, modal set
$V(\psi) = \inf \text{Re}(\lambda)$	Stability functional	least-mode real-part, spectral floor
$M_c = \{\psi \mid V(\psi)=0\}$	Critical manifold	collapse boundary, tipping surface
$C(t)$	Cross-channel coherence	synchrony, coupling
$D(t) = [C_0 - C(t)]/C_0$	Disruption index	normalized coherence loss, gap proxy
PSCI-hat	Spectral collapse index (surrogate)	PSCI surrogate, collapse score
Q0	Identifiability gate	reproducibility check
Q1	Decay-form gate	scaling test
Q2	Exponent correspondence gate	universality check
ϵ_{eq}	Equivalence margin	tolerance band
HYPOTHESIZED / PASSED / FAILED / INCONCLUSIVE	Status tiers	provisional, tentative, mixed

Resonance = measurable energetic state (never a standing) **D(t)** ≠ "gap proxy" in external prose (it is the disruption index; the gap is $\Delta\lambda$) **φ firewall** = maintained per Protocol §2.1; φ-specificity excluded from minimal testable core

MIEVM Rating Summary (v1.0 basis)

The following ratings form the consensus basis for the five identified gaps:

LLM	Document rated	Score	Key finding
Claude	As-Is/Bridge/To-Be	—	Bridge asserted not argued; Q2 undefined; confound firebreak missing
DeepSeek	As-Is/Bridge/To-Be	B+	Architecturally complete, empirically unbuilt; bridge not yet crossable
Grok	As-Is/Bridge/To-Be	7.8/10	Esoteric overlays risk external credibility; strong internally
Use.ai	As-Is/Bridge/To-Be	8/10 → 10/10 definition	Toy simulation + pinned PSCI-hat + locked Q1/Q2 rules = path to 10
Grok	Science_FAIR draft	7.9/10	Storm Party framing risks undermining scientific core for external audiences
Claude	ADN + Science_FAIR draft	7.8/10	Strong self-diagnostic; rigor uneven on ϵ_{eq} and simulation spec

Consensus: Architecture sound. Five specific gaps must close before any external submission or claim of isomorphism.

Five Gaps Requiring Resolution Before v2.0

These are the load-bearing items from the ADN. All five must be resolved or formally acknowledged before v2.0 is published.

#	Gap	Resolution path	Target version
E1	Coherence→gap bridge asserted, not argued	Pellis/UoI simulation (S1-S3 criteria)	Before v2.0
E2	Q2 equivalence margin undefined	Pre-registered: $\varepsilon_{eq} = 0.10$, CI intersection criterion	v1.0 ✓ RESOLVED HERE
O1	No confound firebreak	Pre-registration block: SNR_min, artifact-rejection %, respiration handling	Before human data collection
O2	No MIEVM Refusal Record as standalone deposit	Extract from ADN_LLM_2, create formal record, deposit to Zenodo	Before any isomorphism claim
O3	Terminology dual-use risk	Controlled vocabulary table (above) adopted as binding exhibit	v1.0 ✓ RESOLVED HERE

Note on E2: The equivalence margin $\varepsilon_{eq} = 0.10$ is now pre-registered in this document. Q2 passes if the 95% bootstrap CI of v_{phys} intersects $[v_{Pellis} - 0.10, v_{Pellis} + 0.10]$. This resolves E2 in v1.0.

Note on O3: The controlled vocabulary table above is the binding exhibit. All v1.0 documents adopt it. This resolves O3 in v1.0.

Version Signature

This version definition is complete and locked when signed below.

Version: 1.0 **Date of definition:** June 14, 2026 **Author:** Joseph A. Sprute (ERES Maestro)
ORCID: 0000-0001-9946-3221 **Signature:** _____ (date of Zenodo deposit)

What this signature means:

- The contents listed above are complete and correct as of the date signed
- Nothing in the "Does NOT Contain" list is being concealed — it is genuinely absent
- The five gaps are acknowledged; E2 and O3 are resolved in this version
- E1, O1, and O2 remain open and are documented as open
- No isomorphism claim is made in v1.0
- v2.0 will not be published until the simulation pre-test and Q0–Q2 gates are passed or formally failed
