Provenance & Canonical Status

The CyberRAVE 72 Key Domains were culled from the Register of Collective Indices (RCI) during Global_VPN work (pre-1997), co-founded by Joseph Allen Sprute (JAS) with Emanuel M. Alexiou (EMA) and Anthony Ferguson (CFAL). The culling methodology was constraint-based: financial capacity to renew TLD VPN-centric domain names determined survival in the set. This same epistemological principle of resource-constrained selection later produced the MIEVM short-listed validation ensemble.

The count of 72 is canonically significant: 72 is the gematria value of "Joseph Allen Sprute" (DOB Oct 26, 1964: $10+26=36$, $36\times2=72$, $72\times3=216$ = full name gematria). The column header in the source spreadsheet reads "CyberRAVE (70)" — an artifact of early labeling not updated when the final two entries were added. The XLS source is authoritative; this document supersedes any count discrepancy in derived files.

Canonical Notes

RAIL (domain 52) and RAILROAD (domain 51) appear as two distinct entries. This is intentional and reflects the constraint-based culling epistemology: granularity is meaningful differentiation, not redundancy. RAILROAD refers to line-haul and infrastructure operations; RAIL encompasses the broader rail transport ecosystem including transit, logistics, and light rail.

CyberRAVE = Cybernetic Ratings Abolishing Veiled Exchanges (locked backronym, SPT Papers, March 2026).
