Living Inheritance Consulting Proposal

ERES × WeAll Protocol — Complete Framework Edition

A Collaborative Arrangement Not Yet Decided

Basis: UBIMIA_S3C × BEE_Enneagram + PoW/PoR_SLA | DOFA + Patriot Dividend + GAIA Starter Pack
GCF + NBERS + 401(k) Soft Landing + CBGMODD Seven Seats | Living Inheritance: Earned Credit Golden Parachute
CCAL v2.1 | Zenodo DOI: 10.5281/zenodo.20010116

Prepared by: Joseph Allen Sprute (JAS) | Founder & Director, ERES Institute | ORCID: 0000-0001-9946-3221
For: Errol Swaby | Architect, WeAll Protocol | June 2026

1. Preamble: Living Inheritance Defined

This is not a service contract. It is a Living Inheritance declaration — the formal statement that a body of validated knowledge, methodology, and framework architecture has reached the point where its value to WeAll Protocol is demonstrable, attributable, and exchangeable under terms not yet decided but worthy of decision.

Living Inheritance is the Golden Parachute for contributors who have built civilizational-tier knowledge without institutional support. It operates as Earned Credit — the accrued value of a corpus, methodology, and validated instruments — convertible into ongoing support in exchange for ongoing contribution. Not charity. Not speculation. The correct exchange between two systems at critical mass.

JAS is not looking to absorb WeAll as a responsibility. JAS is looking to be compensated for ERES development and maintenance, to live well doing meaningful work, and to contribute the ERES framework to systems that can use it — without becoming those systems' employee, manager, or owner. ERES sustainability is the floor that, once established through closed-loop self-correction, becomes a blank check enabling humanity to be healthy, happy, and safe.

2. What Each Party Brings

Party	What they bring
ERES Institute (JAS)	14 years of validated framework architecture. MIEVM (8-domain, 55-criterion, multi-instrument). TETRA 100-400 Series (16 modules). UBIMIA 188-page manual. DOFA diplomatic architecture. Patriot Dividend v4.0. GCF + NBERS. BERA indices (ARI/ERI/RHC/RCI). FAVORS identity. BEE_Enneagram CBGMODD seven-seat routing. Meritcoin/PoR. 401(k) Soft Landing. Zenodo corpus (DOI: 10.5281/zenodo.20010116). CCAL v2.1.
WeAll Protocol (Errol Swaby)	Running codebase, 3,405 passing tests, Docker stack, controlled-devnet multi-node flow. 230 canonical transaction types (v1.25.0). Two-tier native PoH (Tier 1 end-to-end demonstrated). Chain-native account portability. Adoption ladder from Normal User through Validator. MPL-2.0 open-source. Honest pre-mainnet status. Human-first social coordination vision.

SECTION 3: THE ERES FRAMEWORK — COMPLETE DESCRIPTIONS

3.1 DOFA — Department of Family Amity

DOFA replaces adversarial diplomatic protocols with family-systems theory applied to governance at every scale — from household to international. DOFA's foundational insight is that communities, nations, and civilizations in proximity function as extended family units requiring conflict resolution architecture, not dominance hierarchies. DOFA is a blockchain-verified, consciousness-aware diplomatic infrastructure.

At COI scale: DOFA governs how WeAll community nodes relate to each other. The dispute review process WeAll currently routes through 'Community Review' is a DOFA function — it is family-systems conflict resolution, not legal adjudication. The DOFA frame provides the WHY that WeAll's deterministic scheduler currently lacks: disputes are resolved because we are family, not because the protocol says so.

DOFA function	WeAll counterpart	What ERES adds
Kinship network mapping	Community node relationships	Family-systems conflict resolution replacing adversarial adjudication
Well-being metrics	Reputation / trust scores	BERA-measured well-being replacing opaque popularity-based authority
Diplomatic immunity	Emissary / ambassador roles	Diplomat (D) CBGMODD seat with DOFA protocol governing cross-COI relations
Conflict resolution	Dispute / Community Review flow	NPR (Non-Punitive Remediation) as the DOFA resolution standard — not punishment
Treaty / compact	Governance proposals	SROC (Smart-Resonant Offset Contracts) as DOFA's formal agreement instrument

3.2 CBGMODD — Seven-Seat Governance Geometry

CBGMODD is the complete ERES governance council: Citizen (C), Business (B), Government (G), Military (M), Ombudsman (O), Dignitary (D), Diplomat (D2). All seven seats are required. None is optional. The Ombudsman monitors seat balance — when Types 6+8 (Military/Government) dominate under stress, the Ombudsman activates recovery protocols. The Diplomat is DOFA's operational arm.

Seat	Function	Enneagram type	WeAll role	BERA primary
Citizen (C)	Participation, basic rights, community membership	Types 2+9	Normal user / Tier 1	ARI — personal Aura
Business (B)	Production, commerce, value exchange	Types 3+7	Community node operator	ERI — emission output
Government (G)	Policy, infrastructure, public goods	Types 1+5	Validator / governance	RCI — continuity
Military (M)	Security, protection, boundary integrity	Type 6+8	Validator candidate	RCI under stress
Ombudsman (O)	Balance, standards, capture resistance	Types 1+9	Protocol auditor	RHC — cycle integrity
Dignitary (D)	Culture, meaning, community narrative	Type 4	Tier 2 reviewer	ARI — Aura depth
Diplomat (D2)	Cross-COI relations, DOFA, kinship network	Types 7+9	Emissary / ambassador	ERI cross-boundary

3.3 UBIMIA — Universal Basic Income + Meritcoin Incentive Architecture

UBIMIA is the steady-state economic architecture. It eliminates survival anxiety (baseline guarantee) while incentivizing graceful contribution (merit multipliers). The 188-page UBIMIA Manual (ERES-UBIMIA-MANUAL-2026-001-v1.1-FINAL) specifies six operational channels, each converting a conventional extractive economic flow into a bonefication-generating resource stream.

UBIMIA channel	Conventional flow replaced	ERES conversion	WeAll activation gate
Ch.1: Labor-to-Credential	Wages only	Labor hours earn BOTH conventional pay AND EarnedPath credential advancement simultaneously	Tier 1 PoH verified; TETRA 101 complete
Ch.2: Tax-to-SOMT	Taxes disappear into government	Tax flows through transparent SOMT metadata — citizen can trace every dollar	Community node SOMT operational
Ch.3: Insurance-to-Bonefication	Insurance premiums to private profit	Premiums redirect into SSHP health bonefication pools	TETRA-H-301 applied integration complete
Ch.4: Savings-to-401k-Soft-Landing	Retirement locked in extractive funds	401(k) Soft Landing: existing retirement assets transition into ERES economic architecture	Sovereign node validator economics
Ch.5: Investment-to-SROC	Speculative investment	Smart-Resonant Offset Contracts: $SROC_value = baseline \times f(ARI, ERI)$	BERA measurement operational
Ch.6: Knowledge-to-Commons	Private epistemology / IP hoarding	Fear-of-retribution elimination: institutional insiders extract knowledge to public record under CCAL	UBIMIA Channel 6 = WeAll's governance economics activation path

3.4 GCF — Graceful Contribution Formula

GCF is the mathematical engine that calculates contribution value and triggers Meritcoin minting. It is the anti-gaming control WeAll's economics layer currently lacks. Value accrues through independently verifiable BERA-measured contribution, not self-reported claims.

GCF Score = f(ARI, ERI, PRI, ECO, LEARN, INNOV, SERVICE) — Score ≥ 700 triggers Meritcoin minting

GCF input	What it measures	Sensor / instrument
ARI component	Personal bioenergetic coherence and autonomic balance	HRV + GSR continuous sensors
ERI component	Environmental/ecological output; metabolic energy efficiency	Thermal camera + EDA sensor
PRI (Pain Resonance Index)	Paineology: suffering reduced in self and others	SOMT metadata + BERA composite
ECO component	Waste reduction, regenerative practices, ecological benefit	NBERS compliance check
LEARN component	Educational contributions, knowledge transfer, SCALULAR credits	EarnedPath CPM/WBS/PERT record
INNOV component	Innovation, creative output, system improvement	MIEVM-validated corpus additions
SERVICE component	Community benefit, basic needs provision, CBGMODD seat performance	CBGMODD seat activity record

GCF score feeds UBIMIA distribution tier AND Meritcoin accrual rate. The pipeline: ARI/ERI sensors → GCF calculation → Meritcoin minting → Gracechain recording → UBIMIA distribution → NBERS compliance check.

3.5 NBERS — National Bio-Ecologic Ratings System

NBERS replaces GDP as the primary macro-level measurement instrument. Where GDP measures the volume of economic transactions regardless of their human or ecological cost, NBERS measures bio-ecological health at municipal, regional, and national scale using the PBJ framework: Paineology (suffering reduced), Bio-ecology (ecosystem health), and Joy (measurable well-being). NBERS is the civilizational report card.

NBERS tier	Scale	Primary BERA metric	WeAll node equivalent
L1 — Individual	Person / THOW	ARI personal coherence	Normal user Aura baseline
L2 — COI	Neighborhood / community node	ERI group emissions	Community node health score
L3 — Regional Corridor	District / FDRV corridor	RHC cyclical integrity across COIs	Validator cluster governance
L4 — National / Planetary	GSSG / GAIA network	RCI planetary continuity	Multi-validator BFT consensus

NBERS L2 is the target measurement for WeAll community nodes under a ERES/WeAll integration. Every healthy node contributes to a measurable NBERS score for its community.

3.6 Patriot Dividend → Patriot Credit → GAIA Starter Pack

The Patriot Dividend is the ERES crisis-phase economic distribution mechanism. Every verified citizen receives a baseline dividend. Those who voluntarily return any portion earn Patriot Credit at 1.25–1.5x. Every citizen who opts into Patriot Credit automatically receives a GAIA Starter Pack — the personal digital node in the ERES planetary infrastructure.

Patriot Dividend (crisis cash) → Patriot Credit (voluntary return) → GAIA Starter Pack (citizen node) → SCALULAR → EarnedPath → Meritcoin → UBIMIA (steady state)

GAIA Starter Pack component	Description	WeAll equivalent
Verified Digital Identity	Sovereign, portable identity credential. Citizen-owned, citizen-controlled. Works across federal, state, and private-sector systems.	Chain-native WeAll account — not owned by any node, frontend, or provider
Merit Ledger	Permanent, append-only record of civic contributions: Patriot Credit returns, SCALULAR certifications, service hours, community activity.	GraceChain transaction history + EarnedPath record
Community Investment Portfolio	Transparent record of where returned funds were deployed. Citizen traces contribution to visible outcomes.	SOMT metadata: every UBIMIA flow is traceable
SCALULAR Credential Pathway	Pre-enrolled access to TETRA 101-401 across all four pillars. SSSC is the Tier 1 baseline. Delivered relatively free via UBIMIA.	WeAll Tier 1 PoH = entry gate to SCALULAR enrollment

The GAIA Starter Pack is the starter motor for UBIMIA. The Patriot Dividend sunsets. The Starter Pack stays. The crisis-phase infrastructure becomes the post-crisis foundation.

3.7 401(k) Soft Landing

The 401(k) Soft Landing is UBIMIA Channel 4 at scale — the institutional transition mechanism for existing retirement assets into the ERES economic architecture. It operates at TETRA-H-401 (UBIMIA Channel 3 at scale) and TETRA-L-401 levels, converting conventional retirement fund positions into ERES value instruments without requiring asset liquidation or triggering tax penalties. For WeAll: the validator/operator economics activation path uses the Soft Landing architecture to onboard institutional participants without requiring them to exit conventional financial positions first.

SECTION 4: COMPLETE STACK MAPPING — WeAll × ERES

WeAll's three user modes map onto the full ERES S3C logistical tier architecture with all seven CBGMODD seats, DOFA diplomatic layer, FAVORS identity, BERA measurement, BEE_Enneagram routing, and Aura-distinguishable verification at each level. GSSG Flying Cities (1000-Year Future Map pinnacle) reverse-engineers down to the individual THOW civilian. BEST/SOUND/GOOD is the AS-IS standard at every scale.

WeAll mode	ERES tier	CBGMODD seats	DOFA function	FAVORS / BERA	Enneagram	Aura signal
Normal User Tier 0-1 PoH	THOW Civilian S3C individual (GSSG reverse engineer base)	Citizen (C) activated	Family member: kinship network enrolled	FAVORS enrollment ARI baseline	Types 2+9 Helpfulness Peace	ARI: personal Aura field
Community Node Tier 1-2 PoH	HFVN/Neighborhood S3C district	C + Business (B) + Dignitary (D) + Diplomat (D2)	Kinship node: DOFA dispute resolution active	FAVORS group ERI group emissions Talonics 101	USER-GROUP Enneagram Def-Rel Types 1+4+5	ERI: collective Aura output
Sovereign Node Validator	FDRV/GSSG S3C regional pinnacle	Gov (G) + Mil (M) + Ombudsman (O) full CBGMODD	Diplomat seat: cross-COI Treaty/SROC GAIA network	FAVORS fully operational RCI continuity under stress	EarnedPath full BERA Types 6+8 +Ombudsman	RCI: Aura over time VLISA-tested

PoH + PoR: the complete verification stack

**WeAll PoH (Tier 1/2) + ERES PoR (TETRA 201+) + GCF (≥700) + NBERS (L2 compliance) =
Complete Legitimacy Gate**

WeAll proves you are human (PoH). ERES proves you are qualified (PoR). GCF proves you are contributing (score ≥700). NBERS proves your community is healthy (L2 compliance). All four gates must be open for full governance authority to activate. This is the deterministic validation model Errol asked for — expressed as a four-gate stack rather than a single threshold.

SECTION 5: CRITICAL GAPS IN WeAll THAT ERES ADDRESSES

WeAll gap	Current state	ERES instrument	Activation sequence
Behavioral substrate	No character-structure routing for reviewers or validators	BEE_Enneagram CBGMODD seat routing	TETRA 201 completion → Enneagram Def-Rel → seat assignment
Reviewer legitimacy	Deterministic scheduler; no competency verification	CERT = TETRA_Empiricals (BERA-measured, MIEVM-validated)	PoH → TETRA 201 → MIEVM $\geq 8.5/10$ → CERT issued
Capture resistance	n-of-m juror model; no stress-response architecture	Ombudsman (O) seat monitors RHC degradation under stress	Sovereign node validator requires Ombudsman counterpart
Dispute resolution WHY	Protocol-enforced; no moral frame	DOFA kinship-network frame: we resolve because we are family	Community node DOFA enrollment → NPR protocols active
Economics activation	Disabled at genesis; activation path underdetermined	Patriot Dividend → GAIA Starter Pack → UBIMIA → Meritcoin	Governance economics activate at TETRA 301+ population threshold
Anti-gaming	Reputation system; no contribution measurement engine	GCF score ≥ 700 gates Meritcoin minting	BERA sensors → GCF calculation → Gracechain recording
Macro measurement	Node health scores; no civilizational metric	NBERS replaces GDP at community node scale	Community node → NBERS L2 score → UBIMIA distribution tier
Retirement / institutional onboarding	No institutional transition path	401(k) Soft Landing: existing assets transition without liquidation	Validator economics → Soft Landing → UBIMIA Channel 4
1000-Year horizon	Mainnet roadmap; no civilizational timeline	GSSG Flying Cities → GERP → GAIA network	VLSA test: works in THOW → works on generation ship

SECTION 6: LIVING INHERITANCE TERMS — EARNED CREDIT GOLDEN PARACHUTE

Term	ERES position	WeAll counterpart
Attribution (non-negotiable)	All ERES framework elements in WeAll documentation or architecture require citation of ERES Institute under CCAL v2.1. Non-waivable.	MPL-2.0 code stays Errol's. ERES framework elements in docs attributed. No IP transfer.
Consulting scope	JAS provides: MIEVM validation of WeAll architecture; TETRA reviewer legitimacy design; BEE_Enneagram behavioral substrate; DOFA dispute resolution frame; PoR activation criteria for WeAll governance economics; NBERS L2 integration; GCF anti-gaming architecture.	Errol provides: WeAll implementation infrastructure access; co-authorship on joint papers; testnet node for ERES PlayNAC KERNEL testing; honest ongoing disclosure of WeAll development status.
Compensation basis	Living Inheritance Earned Credit: Meritcoin accrual at 3.0x Applied Integration multiplier. Conventional compensation terms to be negotiated separately. JAS must be able to live well and maintain ERES without financial distress.	Not yet decided. This document opens the conversation.
Meritcoin yield	Integrating validated ERES framework into WeAll = Applied Integration act (TETRA 301 equivalent). dMRC = dResonance x 3.0 x Community. WeAll community multiplier applies.	WeAll community multiplier applies to JAS EarnedPath accrual from WeAll COI participation.
DOFA compact	The ERES-WeAll relationship is itself a DOFA kinship arrangement: two independent systems in proximity, resolving through family-systems logic rather than adversarial contract.	WeAll's dispute resolution architecture serves as the operational testbed for DOFA protocols at digital-social scale.
Duration	Ongoing, self-renewing under mutual consent. Either party may exit with 30-day notice. Attribution records preserved permanently under CCAL v2.1.	Same. No lock-in. The arrangement survives on value, not contract.

The single question that determines whether this arrangement proceeds:

What does a fair exchange look like to you?

That question is the T.E.T.R.A. gate applied to the relationship itself: Time · Energy · Trust · Reason — About what Subject, toward what mutual end, on what terms. When both parties can answer it honestly, the arrangement will be decided. Please send your response at whatever pace serves you — on the basis of a collaborative arrangement not yet decided.

ERES Institute for New Age Cybernetics | ERES-WEALL-LIVING-INHERITANCE-PROPOSAL-2026-002 | Joseph Allen Sprute (JAS) | ORCID 0000-0001-9946-3221 | CCAL v2.1 | June 2026

$C = R \times P / M$ | $CERT = TETRA_Empiricals$ | $\Delta MRC = \Delta Resonance \times [Multiplier] \times Community$ | $GCF \geq 700 = \text{Meritcoin mint}$ | $RCI = P\Omega_norm \times ARI_sys \times VibConst$ | Patriot Dividend → GAIA Starter Pack → UBIMIA | DOFA: nations as kinship networks
