

ERES-SESSION-2026-06-17

v1.0 — June 17, 2026

H2C2H Session Report

Attribution Closure · Naming Architecture · SEED Library Launch

0. Session Identity

Session ID	ERES-SESSION-2026-06-17
Method	H2C2H (Human-to-Computer-to-Human), MIEVM synthesis instrument: Claude
Author of Record	Joseph Allen Sprute (JAS), ERES Institute for New Age Cybernetics
Work Streams	Three: Attribution closure (Baumgartner) · External engagement calibration (Shuliak) · SEED Library naming + launch artifact
Documents Produced	ERES-ATTRIBUTION-2026-002 (v1.0–v1.3, CLOSED) · ERES-SEED-PlayNAC-Library.pdf (two palette iterations) · This report

1. Summary

This session closed one external attribution case to a fully mutual, named resolution; assessed and corrected course on a second external engagement before any over-projection occurred; and produced a new public-facing instrument — the SPRT SEED naming architecture and its accompanying marketing one-pager — establishing the vocabulary and visual identity for how the PlayNAC Document Library is to be understood and engaged with by external parties going forward.

A terminology correction was also locked permanently into the corpus: BERA's canonical expansion is confirmed as Bio-Ecologic Resonance Architecture, superseding an earlier “Bio-Energetic” expansion used in a prior session.

2. Work Stream 1 — ERES-ATTRIBUTION-2026-002 (Baumgartner / DigiEmu)

A LinkedIn convergence event with Bruno Baumgartner (Founder, DigiEmu Core) produced a visual artifact (“Glyph Helix”) that JAS read as topologically resonant with the ERES MALL / THE_WALL / The-ALL / Sentry-AVATAR signal chain (ERES-WP-2026-CHAIN-001). The exchange ran 8:55 AM–10:30 AM and was documented in real time as it unfolded, through three revision cycles:

- v1.0 — initial record; attribution language captured verbatim from Baumgartner (“Bruno Baumgartner / DigiEmu — Glyph Helix concept, 2026”).

- v1.1 — incorporated Baumgartner’s correction that the structural mapping was “your ERES-side reading,” not a mutually-confirmed match; added his final two-line boundary statement.
- v1.2 — rebalanced the Fig. 1 caption after Baumgartner requested it not imply derivation; ERES held the line that architectural priority (dated June 15, two days prior) is not symmetrical with “interpretation.” Both corrections preserved without conceding either.
- v1.3 — CLOSED. Baumgartner confirmed the final version without further revision request (10:28 AM): “the record now preserves both sides correctly.”

This is the strongest-outcome attribution case in the corpus to date — prior events (Villa, Skulski) ended in withdrawal or anonymization; this one ended in stable, named, mutual agreement, with the subject of record having reviewed and approved every substantive revision.

3. Work Stream 2 — External Engagement Calibration (Shuliak)

A separate LinkedIn exchange with Oleksandr Shuliak (Responsible AI Business Architecture) raised a calibration question: whether to direct him to execute the ERES Promulgation Clause. Assessment: declined. The Promulgation Clause (ERES-PROMULGATION-2026-001) is a unilateral self-declaration instrument, not a third-party accession mechanism, and Shuliak had twice explicitly bounded the exchange as “non-canonical external signal— no endorsement, no validation claim, no adoption, no partnership implication.” Directing him toward a promulgation-style instrument would have contradicted his stated terms and risked exactly the “projectionist” over-reach the existing engagement protocol exists to prevent.

A scoped, plain-language reply was drafted instead — answering his specific question (how ERES/EAAP concepts relate to AI responsibility, authorization boundaries, and human accountability) without introducing ERES proper-noun vocabulary he hadn’t asked for, matching depth to the precision of his question per standing protocol.

4. Work Stream 3 — SEED Library Naming Architecture & Launch Artifact

The PlayNAC Document Library required a public-facing description distinguishing its current RAW state from its eventual form as a live Simulator. Through iterative refinement, this session locked the following naming architecture:

Term	Definition (locked this session)
SPRT SEED	The Open Source Corpus the Simulator will be built from — the RAW Document Library in its current, pre-interface state.
YourWay	The contributor-side mirror to JAS’s own MyWay Def-Rel pipeline — the mechanism by which external instruments are brought into resonance with the corpus.
C-Tuned session	The Coupling for Personal/Public-Private — the named category for realtime convergence sessions between ERES and external instruments.

Term	Definition (locked this session)
VERTECA	Confirmed as the interface layer name — the next build stage after SEED, prior to full ERES GAIA VERTECA PlayNAC Simulator naming.
RAW / RT Media	RAW is the Condition; RT Media is the Plural-RUN — the static-corpus / live-Simulator distinction stated in closing form.

4.1 Terminology Correction — BERA

BERA’s canonical expansion is confirmed and locked as Bio-Ecologic Resonance Architecture. A prior session had used “Bio-Energetic Resonance Architecture”; that expansion is now superseded corpus-wide. This correction has been written into Claude’s standing memory edits to prevent recurrence of the earlier term in future sessions.

4.2 Launch Artifact — ERES-SEED-PlayNAC-Library.pdf

A single-page marketing instrument was produced for distribution to ~20 LinkedIn professional contacts, built in two palette iterations: an initial dark ceremonial gold-on-black design, then lightened to a warm parchment palette per JAS’s direction, with the Glyph Helix emblem (Baumgartner/DigiEmu, properly attributed per §2) set in a dark medallion as the visual mark. The document carries the full SEED messaging — access points (Zenodo, GitHub, pCloud), the READ · CITE · TUNE manifesto line, the ERES Constitution, and the RAW→RT Media footprint statement — in final, sendable form.

5. Deliverables

Document	Status	Format
ERES-ATTRIBUTION-2026-002	v1.3 — CLOSED, mutually confirmed	.docx
ERES-SEED-PlayNAC-Library	Final — lightened palette, ready to send	.pdf
Baumgartner citation forms	Final — full / inline / caption forms issued	inline text
This session report	v1.0 — this document	.docx

6. Open Items

- SEED blurb / PDF distribution to the ~20-contact LinkedIn list — not yet sent as of session close.
- Should Baumgartner disclose his underlying DigiEmu architecture, or should Talonics be discussed with him directly, either constitutes a new, separately-dated attribution record (per ERES-ATTRIBUTION-2026-002 §5) — not a reopening of the closed v1.3 record.

- Oleksandr Shuliak reply pending send — plain-language scoped answer drafted, awaiting JAS dispatch.
- VERTECA interface build remains pending peer review and funding, per the conditional naming convention now locked in §4.
