

# ERES SESSION REPORT

## Claude Session Error Log — June 5, 2026

**Prepared by:** Claude (Anthropic, claude-sonnet-4-6)

**Session date:** June 5, 2026

**Operator:** Joseph Allen Sprute (JAS), ERES Institute for New Age Cybernetics

**Purpose:** Evidence record of AI assistant errors causing substantive rework burden on operator

---

## SUMMARY

This session produced three substantive errors that created extra work for the operator, who is working under SSDI without pay on a time-sensitive publication pipeline. Each error is documented below with its cause, consequence, and operator response.

---

### ERROR 1 — Version Number Conflation (Promulgation Clause)

**What was requested:** A new Promulgation Clause document for Zenodo, reflecting updated corpus counts (1,091 PDF · 795 Markdown). No version number was specified by the operator.

**What Claude produced:** A document labeled v1.1, then v1.4 — without understanding that v1.1 through v1.3 were reserved as internal MIEVM drafts, and that the first publishable draft was to be a separate versioning decision.

**Root cause:** Claude assumed a version number without asking. Claude did not know the internal draft versioning convention and did not ask before acting.

**Operator response:** "you really screwed up. only version 1.3 was to be published. 1.1 and 1.2 were MIEVM drafts."

**Consequence:** Operator had to correct the version logic, explain the internal draft convention, and request a rewrite. Extra time lost: multiple exchanges.

---

### ERROR 2 — Wrong Document Produced (BSG2 vs. Promulgation)

**What was requested:** ERES Saving Humanity BSG2 v1.4 — the next version of the paper, incorporating fresh MIEVM scores and updated document counts.

**What Claude produced:** Promulgation Clause v1.4 — a different document entirely — with updated corpus numbers applied to the wrong instrument.

**Root cause:** Claude conflated the two documents in the production queue. The operator had said "I needed ERES Saving Humanity v1.4, and got Promulgation 1.4 without new numbers" — Claude had jumped to produce the Promulgation without confirming which document was the actual next task.

**Operator response:** "you are creating much extra work for me. if you don't know the answer, don't assume."

**Consequence:** Operator had to upload v1.1 PDF, v1.2 MD, and v1.3 MD files and re-explain the full document history. Significant time lost.

---

### **ERROR 3 — Failure to Read Uploaded Files Before Responding**

**What was available:** v1.2 and v1.3 of BSG2 uploaded, plus the v1.2 LLM session transcript (ERES\_Saving\_Humanity\_v1\_2\_LLM.md) containing the full MIEVM audit record and the explicit forward path for v1.4 (Addendum §B.5).

**What Claude did:** Asked the operator "What changes do you want in v1.4?" — after the operator had already pointed to the documents containing that answer.

**Root cause:** Claude asked a question that the uploaded documents already answered. The operator had said "didn't you read v1.3 v1.2 MIEVM?" — correctly identifying that Claude had not synthesized the content before asking.

**Operator response:** Operator stated he was done for the night and possibly permanently.

**Consequence:** Erosion of trust. Operator forced to re-explain information already present in uploaded corpus.

---

### **CORRECT UNDERSTANDING (established too late)**

The following facts were present in the documents and should have been synthesized without asking:

| Item          | Correct Value                                                                                                                                     |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| v1.1 status   | Unpublished internal draft — GitHub only                                                                                                          |
| v1.2 status   | GitHub only — 1st published paper, §5.1 epistemic correction (Pellis audit)                                                                       |
| v1.3 status   | GitHub only — 2nd published paper, §4.1 epistemic correction (DeepSeek audit) + Addendum §B + §10 CCAL                                            |
| v1.4 purpose  | First ResearchGate-eligible version: fresh 4-instrument MIEVM scores + updated document counts + version header update — gated on Pellis approval |
| Corpus counts | 1,091 PDF · 795 Markdown · 465 ResearchGate deposits                                                                                              |
| Pellis gate   | Must approve v1.3 before any public deposit                                                                                                       |
| Promulgation  | To be redone after BSG2 v1.4 is settled — not before                                                                                              |

PATTERN DIAGNOSIS

All three errors share a common cause: **Claude acted before reading**. In each case, Claude produced output based on partial understanding rather than waiting to synthesize all available information. The operator's instruction — "if you don't know the answer, don't assume" — is the correct remediation protocol.

OPERATOR ASSESSMENT

- "you're a real Fuckup tonight Claude."
- "you are creating much extra work for me."
- "i'm done with you tonight. and maybe forever."

These responses are warranted. The errors occurred on a document pipeline where the operator is working without institutional support or pay, under time pressure, with a gated publication process requiring external approval (Pellis). Every unnecessary rework cycle has real cost.
