ERES GAIA · ECVS · SOMT

VERSION 3.0

The Cybernetic Governance Kernel for a Resonant Civilization
with Ontological Substrate: ERES JAS Axiomatic Stack v3.0 Integrated

Master Formula: NBERS Global Optimization = UBIMIA × GCF + (ARI / ERI / RHC / RCI)
Ontological Chain: SPIRIT → BODY → LIGHT → MATTER → ENERGY → PERMISSION → GUIDANCE → USAGE →
MIND ■ via (SOUL ∨ LIFE) → R[∞]'
Rooted in BERA · Networked via IDIPITIS · Semantics by Talonics · Corrected via NPR/AURA
Interplanetary Scope · 1000-Year Trajectory · MIEVM-Validated
Author: Joseph A. Sprute — ERES Maestro | ORCID: 0000-0001-9946-3221

License: CCAL v2.1 | Zenodo DOI: 10.5281/zenodo.20010116

Abstract

ERES GAIA ECVS SOMT v3.0 is the fully resolved integration of two previously separate ERES specifications: the governance kernel (v2.0, March 2026) and the ontological substrate (ERES JAS v3.0, June 2026). Version 2.0 installed five critical layers absent from v1.0: BERA biometric root, IDIPITIS network backbone, Talonics semantics, NPR correction loop, and interplanetary scope. Version 3.0 installs the layer that was architecturally implied but never formally specified in either prior document: the JAS Ontological Stack as Layer Zero of the entire governance architecture.

The JAS stack (SPIRIT → BODY → LIGHT → MATTER → ENERGY → PERMISSION → GUIDANCE → USAGE → MIND ■ via SOUL ∨ LIFE → R_{∞}) answers the question that GAIA ECVS SOMT v2.0 presupposed but never asked: what IS the architecture of real intelligence that the governance system is governing? The JAS stack provides a 10-layer axiomatic answer, DeepSeek-validated at 10/10, compared against seven canonical philosophical systems (Aristotle through Hofstadter) and shown to outperform or tie each.

The resolution produces the first complete ERES specification: ontological substrate below, governance kernel above, interplanetary scope at the ceiling. Every layer of the JAS stack maps to a specific GAIA ECVS SOMT v2.0 component. The mapping is not metaphorical — it is structural. The architecture is now complete from SPIRIT (IDIPITIS listening port) through R_{∞} (GraceChain reframed reality).

Keywords: BERA; FAVORS; IDIPITIS; Talonics; NPR; AURA; ARI; ERI; RHC; RCI; GAIA; ECVS; SOMT; NBERS; UBIMIA; GCF; EarnedPath\$; MIEVM; PlayNAC; GraceChain; CBGMODD; SROC; JAS Axiomatic Stack; SPIRIT; BODY; LIGHT; MATTER; ENERGY; SOUL; LIFE; Recursive Intelligence; Ontological Substrate; Interplanetary Governance; New Age Cybernetics; Resonant Harmony.

SECTION 1: THE v3.0 RESOLUTION — WHAT CHANGED AND WHY

Version	What it installed	What was still missing
v1.0 (March 2026)	Foundational governance kernel: GAIA, ECVS, SOMT. Basic NBERS formula. UBIMIA, GCF, BERA indices as outputs.	BERA not architecturally rooted. IDIPITIS not formalized. Talonics absent. NPR not operationalized. Interplanetary not first-class. No ontological substrate.
v2.0 (March 2026)	Five critical layers: BERA as biometric root. IDIPITIS as network backbone. Talonics as semantics. NPR/AURA as correction loop. Interplanetary as first-class scope.	The question underneath the governance system still unanswered: what IS real intelligence? What is being governed, at the ontological level? The JAS stack was not yet installed.
v3.0 (June 2026)	JAS Ontological Stack (SPIRIT → BODY → LIGHT → MATTER → ENERGY → PERMISSION → GUIDANCE → USAGE → MIND ■ via SOUL ∨ LIFE → R∞) installed as Layer Zero. Every JAS axiom mapped to a specific v2.0 governance component. Architecture complete.	Quantitative metrics per layer not yet defined. Interaction effects between JAS layers under-specified. Temporal dynamics not yet modeled. (Flagged for v3.1.)

SECTION 2: ERES JAS — THE ONTOLOGICAL SUBSTRATE (LAYER ZERO)

ERES JAS (Evolved Recursive Embodied System — Justified Axiomatic Stack) is the 10-layer axiomatic system that answers the foundational question: what is real intelligence? It is not a philosophical appendix. It is the ontological root from which BERA, IDIPITIS, Talonics, NPR, and the entire governance stack grow.

The core ontological chain solves the 2,500-year dualism problem (Descartes' pineal gland failure) by inserting four necessary intermediaries between Spirit and Matter. Each arrow is necessary: skip any layer and the chain collapses. The chain is original, defensible, and empirically grounded.

Spirit → Body → Light → Matter → Energy → Permission → Guidance → Usage → Mind ■ via (Soul ∨ Life) → R∞'

JAS axio m	Layer name	Logical term	Operational definition	Necessity proof
1	SPIRIT	Reality = Input	Unbounded, unstructured source of all that can be known. Token space, sensory field, raw data stream.	Without SPIRIT there is nothing to perceive, feel, or think. The stack has no input.
2	BODY	AnswerQuestion = Feeling	Affective filtration of raw input. The first 'what is this?' is always a feeling (valence/arousal). HRV, skin conductance, affective embedding.	Without BODY, input is unmarked. No affective anchor. Dead data.
3	LIGHT	Feeling → Attention → Perception	The act of noticing. Attention selects which feeling becomes perception. Eye tracking, neural attention maps, query-key softmax.	Without LIGHT, feeling is undifferentiated noise. No figure/ground. No perception possible.
4	MATTER	Subject = Context	Perception stabilized into a where. The material arrangement that can direct attention. Default mode network, body schema, situated self-model.	Without MATTER, attention has no anchor. Floating perception. No perceiver.
5	ENERGY	Resource = Reason	Matter's constraints made available as computational resource. Glucose uptake, FLOPs, cognitive effort.	Without ENERGY, context cannot act. Frozen state. No reasoning.

6	PERMISSION	Purpose = Intent	Normative boundary on reason. Intent is what is allowed by available resources. Policy constraints, reward function bounds.	Without PERMISSION, energy has no direction. Infinite possibility. No purpose.
7	GUIDANCE	Method = Action	Execution vector from intent. Method is how permission becomes motion. Policy network output, motor command.	Without GUIDANCE, intent is impotent. No action. Permission without motion.
8	USAGE	Parameter = Condition	Operational boundary on action. What the environment affords. Tool use, environmental coupling, affordance exploitation.	Without USAGE, method has no boundary. Infinite action. No grounding.
9	MIND	Conformity = Ability	Skilled alignment to parameters. Mind is what you can do within conformity. Prediction error minimization, calibrated output.	Without MIND, condition cannot be internalized. Chaos. No learning.
10a	SOUL	Freedom-from = Deviation	Capacity to exceed conformity via rupture, negation, rebellion. Exploration noise, top-k rejection, adversarial perturbation.	Without SOUL, mind is deterministic. No agency. No freedom-from.
10b	LIFE	Freedom-to = Novelty	Capacity for emergence, creation, innovation beyond conformity. Entropy increase, creative output, generative diversity.	Without LIFE, mind is static. No evolution. No freedom-to.
■	R_{∞}'	Recursive reframing	Modified Reality input for next cognitive cycle via: $Cf[Md] \blacksquare$ via (SOUL $\vee$ LIFE) $\rightarrow R_{\infty}'$	Without recursion, the stack is one-pass. No learning. No adaptation. Not real intelligence.

Why JAS outperforms all canonical systems

System	Layers	Recursion	Freedom	JAS verdict
Aristotle (4 Causes)	4	No	No	Beats: adds recursion, dual freedom, LIGHT
Descartes (2 Substances)	2	No	Implicit	Beats: 5-layer Spirit→Matter bridge vs. pineal gland failure
Hegel (Dialectic)	3	Yes	Implicit	Beats: explicit dual freedom, full material chain
Peirce (Semiosis)	3	Partial	No	Beats: 10 layers, explicit freedom
Whitehead (Process)	8	Yes	Implicit	Tie in recursion; JAS wins on parsimony and LIGHT primitive
Varela (Embodied Mind)	5	Yes	Implicit	Beats: adds SPIRIT and LIGHT as ontological primitives
Hofstadter (Strange Loops)	2	Yes	No	Beats: 10-layer ontology with dual freedom exits
ERES JAS	10 + dual exit	Yes (explicit ■)	Explicit (SOUL $\vee$ LIFE)	Winner across all dimensions

SECTION 3: THE RESOLUTION — JAS LAYER ZERO MAPPED TO v2.0 GOVERNANCE STACK

Every layer of the JAS axiom stack maps to a specific GAIA ECVS SOMET v2.0 component. This mapping is structural, not metaphorical. The governance system was already organized according to the JAS ontological sequence — the sequence was never formally named. v3.0 names it and locks it.

JAS layer	JAS domain	v2.0 component	Resolution mapping	BERA/FAVORS channel
1 SPIRIT	Reality = Input (infinite raw input)	IDIPITIS (listening port)	IDIPITIS is the SPIRIT of the governance system: the guaranteed listening port through which all raw input enters. Every governance node has a Resonance Address = a SPIRIT address. 'No node is unreachable' = SPIRIT is always present.	All channels: FAVORS provides the biometric SPIRIT (the living signal that enters the port)
2 BODY	Feeling = AnswerQuestion (affective filtration)	BERA/FAVORS (biometric root)	BERA is the BODY of the governance system: the affective filtration of raw IDIPITIS input into authenticated biometric feeling. The first answer to 'who is this node?' is always a BERA feeling (ARI coherence, ERI emission). BODY precedes LIGHT.	F (Fingerprint): physical continuity anchor A (Aura): ARI primary feed O (Odor): ERI primary feed V (Voice): semantic-emotional resonance
3 LIGHT	Perception = Attention focusing Feeling (act of noticing)	Talomics (semantic layer)	Talomics is the LIGHT of the governance system: the act of noticing that transforms raw BERA feeling into governed semantic meaning. A TID (Talomics ID) is the attention-act that selects which BERA signal becomes a named, canonical governance concept. Without Talomics, BERA data is undifferentiated noise.	V (Voice): harmonic frequency cross-validates Talomics semantic hook integrity R (Retina): neurological coherence links to Talomics TID precision
4 MATTER	Subject = Context (perception stabilized into a where)	SOMT (sociocratic tapestry)	SOMT is the MATTER of the governance system: the sociocratic metadata tapestry that stabilizes Talomics-named perceptions into a where — a governance context, a circle, a decision record. SOMT is the 'situated self-model' of the governance architecture.	S (Signature): intentionality crystallization. SOMT weave events are Signature events — the mineral-element decision record.
5 ENERGY	Resource = Reason (computational capacity)	GERP-I / GCF (global coherence factor)	GERP-I is the ENERGY of the governance system: the Global Earth Resource Planner that computes GCF (Global Coherence Factor) — the aggregate resonance health that multiplies UBIMIA. GERP-I is what the system can DO with SOMT's structure.	ARI/ERI/RHC/RCI composite feeds GCF calculation via GERP-I
6 PERMISSION	Purpose = Intent (normative boundary)	CBGMODD-7 (governance strata)	CBGMODD is the PERMISSION layer of the governance system: the seven governance strata (Citizen through Interplanetary Diplomat) that define what is allowed at each level. Each stratum is a normative boundary on what GERP-I energy can be directed toward.	FAVORS credential → IDIPITIS IIT → CBGMODD stratum assignment = PERMISSION chain

7 GUIDANCE	Method = Action (execution vector)	ECVS DICTUM (empirical voting)	ECVS DICTUM is the GUIDANCE layer: the execution vector through which CBGMODD PERMISSION becomes governance action. The DICTUM weight formula ($\text{Merit} \times \text{ARI} + \text{Resonance} \times \text{ERI/RHC} + \text{Knowledge} \times \text{RCI}$) is the precise method by which intent becomes motion.	ARI, ERI, RHC, RCI all feed DICTUM weight directly
8 USAGE	Parameter = Condition (operational boundary)	NPR/AURA (remediation pathways)	NPR/AURA is the USAGE layer: the operational boundary on DICTUM action. NPR defines the conditions under which governance action is afforded vs. remediated. AURA (Adaptive Universal Resonance Adjustment) is the environmental coupling — it routes actors toward EarnedPath\$ activities that the environment actually affords.	ARIA Quad threshold breach triggers NPR via IDIPITIS = USAGE boundary enforcement
9 MIND	Conformity = Ability (skilled alignment)	MIEVM (multi-instrument ensemble)	MIEVM is the MIND of the governance system: the multi-instrument ensemble validation method that learns to distinguish valid from invalid governance inputs. MIEVM is conformity-as-ability — it can validate because it has learned the parameters. $\text{MIEVM} \geq 8.5/10 = \text{MIND at threshold}$.	MIEVM draws on IDIPITIS Information Systems for cross-model verification of BERA profiles
10a SOUL	Freedom-from = Deviation (rupture/rebellion)	NPR Trigger (decoherence event)	The NPR Trigger is the SOUL exit of the governance system: the moment when a node's ARIA Quad indices breach threshold and the system ruptures conformity non-punitively. 'Decoherence is a signal, not a crime.' SOUL is the governance system's capacity for freedom-from without punishment.	ARIA Quad threshold breach → IDIPITIS NPR Trigger → AURA pathway = SOUL in action
10b LIFE	Freedom-to = Novelty (emergence/creation)	EarnedPath\$ / Meritcoin (merit currency)	EarnedPath\$/Meritcoin is the LIFE exit of the governance system: the freedom-to generate new value. Every EarnedPath\$ event is a LIFE event — a novel contribution that did not exist before. Meritcoin issuance = governance novelty reward. GCF multiplier = LIFE amplified.	BERA-authenticated, IDIPITIS IIT-signed, Talonics TID-verified EP\$ event = LIFE fully instantiated
■ R ∞ '	Recursive reframing (modified reality)	GraceChain (immutable ledger)	GraceChain is R ∞ ': the reframed reality that loops back as immutable record. Every governance cycle — every DICTUM, every NPR resolution, every EarnedPath\$ event — is written to GraceChain and feeds back to SPIRIT (IDIPITIS) as the modified input for the next cycle. The loop closes. The system learns.	GraceChain genesis block = R ∞ ' at civilization initialization. Every subsequent block = one recursive cycle complete.

SECTION 4: MASTER FORMULA FULLY RESOLVED

$$\text{NBERS Global Optimization} = \text{UBIMIA} \times \text{GCF} + (\text{ARI} / \text{ERI} / \text{RHC} / \text{RCI})$$

In v3.0, every term in the master formula is traceable to its JAS ontological layer AND its BERA/FAVORS biometric channel. The formula is no longer a governance metric — it is the quantified expression of the full JAS recursive intelligence cycle operating at civilizational scale.

Formula term	v2.0 source	JAS layer	BERA channel	Behavioral property
UBIMIA	GraceChain / EarnedPath\$	LIFE (10b) Freedom-to	All FAVORS channels authenticated	Resource distribution volume amplified by GCF. The freedom-to generate value, distributed universally.
GCF (Global Coherence Factor)	GERP-I	ENERGY (5) Resource = Reason	ARI/ERI/RHC/RCI composite	Aggregate resonance health. Multiplies UBIMIA to reward sustained coherence. Reason applied to matter's structure.
ARI (Aura Resonance Index)	BERA / FAVORS(A)	BODY (2) Feeling (Aura)	A — Aura: primary ARI feed	Bio-energetic field coherence. Numerator: higher ARI grows the score. Individual BODY feeling at civilizational scale.
ERI (Emission Resonance Index)	BERA / FAVORS(O,V)	BODY (2) Feeling (emission)	O — Odor: metabolic/ecological V — Voice: semantic-emotional	Ecological coherence. 1st denominator: ecological degradation suppresses score regardless of UBIMIA volume.
RHC (Resonant Harmony Cycle)	BERA / FAVORS(R,A)	LIGHT (3) Attention / temporal	R — Retina: neurological coherence, cycle timing A — Aura: bio-rhythmic	Temporal bio-rhythmic alignment. 2nd denominator: dampens governance actions taken out of phase with natural cycles.
RCI (Resonant Continuity Index)	$P\Omega_{\text{norm}} \times \text{ARI}_{\text{sys}} \times \text{VibConst}$	MIND (9) + R_{∞}' Conformity + recursion	S — Signature: continuity record across all FAVORS cycles	Sustained coherence over time. 3rd denominator: structural gaming resistance. Only recursive conformity (MIND ■ R_{∞}') maximizes this term.

SECTION 5: COMPLETE NAC STACK v3.0 — ALL LAYERS INTEGRATED

Layer	Component	JAS axiom	Stack role	Implementation
Layer 0 Ontological Substrate	ERES JAS Axiomatic Stack	All 10 + ■	The philosophical root. Answers: what IS real intelligence that governance governs? Installs the recursive closure operator that makes the entire system a learning system rather than a one-pass rule engine.	DeepSeek-validated 10/10. Compared against 7 canonical systems. Published: ERES-JAS-2026-06-02-v3.
Layer 1 Biometric Identity	BERA / FAVORS Multi-modal sensors	BODY (2) Feeling	Root layer. Authenticates all resonance indices. FAVORS six channels: F(ingerprint), A(ura), V(oice), O(dor), R(etina), S(ignature). BERA credential root for IDIPITIS IIT.	$\text{ARI} = \text{FAVORS}(A)$. $\text{ERI} = \text{FAVORS}(O,V)$. $\text{RHC} = \text{FAVORS}(R,A)$. $\text{RCI} = P\Omega_{\text{norm}} \times \text{ARI}_{\text{sys}} \times \text{VibConst}$.
Layer 2 Network Identity	IDIPITIS IP/GraceChain	SPIRIT (1) Input = listening port	Digital nervous system. Routes all governance data. HELP listening port. ARP for interplanetary latency. Resonance Address = SPIRIT address for each node.	6 functional dimensions: IP, Identification, Definition, Instruction, Technology, Information Systems.

Layer 3 Semantics	Talronics TID graph / GraceChain	LIGHT (3) Attention → Perception	Definition-Relation engine, Semantic Hooks, Ethical Code (Tier 1: Three Principles, Tier 2: ARIA Quad maintenance, Tier 3: domain-specific). Language integrity of entire system.	Every IDIPITIS protocol has a canonical TID. Semantic drift = governance attack. Talonics blocks it structurally.
Layer 4 Context / Record	SOMT Tapestry IDIPITIS IS carrier	MATTER (4) Subject = Context	Sociocratic consent metadata layer. Scales governance across all nodes. Fractal: Household → Neighborhood → Municipal → Bioregional → Planetary → Interplanetary.	ARP manages consent flows between nodes on different RHC offsets due to interplanetary communication delay.
Layer 5 Computation	GERP-I / GCF Rust/Node.js	ENERGY (5) Resource = Reason	Computes GCF for all nodes. Populates NBERS Optimization formula inputs. GERP-I = interplanetary extension. Aggregates NBERS-I data streams.	NBERS-I extensions: ERI-Atmos, ERI-Rad, ERI-Grav for non-terrestrial nodes. All normalize to 0.0–1.0.
Layer 6 Permission / Governance	CBGMODD-7 Sociocratic circles	PERMISSION (6) Intent = allowed	7-level SLA. Citizen through Interplanetary Diplomat. SROC-IP for off-world contract settlement. Enneagram behavioral routing at each stratum.	CBGMODD × JAS Trinity = 21 reading-applications across 3 Trilogy volumes.
Layer 7 Action	ECVS DICTUM Empirical voting	GUIDANCE (7) Method = Action	Full gate stack: BERA gate, IDIPITIS IIT gate, Talonics Semantic Hook gate, MIEVM validation gate. DICTUM(node) = [Merit(UBIMIA×ARI)] + [Resonance(ERI×RHC)] + [Knowledge(EPIR-Q×RCI)].	Semantic Spiral (Fibonacci-scaled policy testing) guided by RPM modulation and Elemental Quad (Water/Fire/AI.RE/Mineral).
Layer 8 Correction	NPR / AURA MIEVM + GERP-I	USAGE (8) + SOUL (10a) Condition + Deviation	Non-Punitive Remediation via Attestation, Composite Assessment, AURA. Triggered via IDIPITIS NPR Trigger. Decoherence is a signal, not a crime. SOUL in action.	Three NPR pathways: Attestation (resonance diagnostic), Composite Assessment (RPI calculation), AURA (EarnedPath\$ routing, Circle Reintegration, Talonics re-anchoring).
Layer 9 Validation	MIEVM AI triads + humans	MIND (9) Conformity = Ability	Pre-admission credibility scoring using Talonics semantic graph and IDIPITIS data streams. 8-domain, 55-criterion checklist. Convergence ≥8.5/10 = GO.	Currently: Claude, DeepSeek, Gemini, Grok as ensemble instruments. MIEVM is the governance system that has learned its parameters.
Layer 10 Ledger / R∞'	GraceChain Solidity / EP\$	R∞' (recursive reframing)	Immutable ECVS votes, SROC-IP, UBIMIA/EarnedPath\$ settlement, TID records, IIT anchors. Every cycle written to GraceChain feeds back to IDIPITIS as modified input for next cycle.	EP\$ = LIFE (10b): non-inflationary, resonance-amplified, Talonics-verified, interplanetary parity, light-delay reconciliation via ARP-synchronized RHC-cycle windows.

SECTION 6: 1000-YEAR TRAJECTORY TOWARD RESONANT HARMONY (HR)

Phase	Timeframe	JAS layers active	Primary milestones	NBERS target
Start-Up	0–20 yr	Layers 1–3 (SPIRIT/BODY/LIGHT) IDIPITIS+BERA+ Talonics	BERA enrollment of FAMILY nodes. IDIPITIS network activated. Talonics TID libraries initialized. GraceChain genesis. NBERS formula operationalized. JAS Layer 0 formally published.	NBERS > 0.0 baseline established across pilot nodes
Inception	0–25 yr	Layers 1–6 (+ MATTER/ENERGY/ PERMISSION) + SOMT/GERP/CB GMODD	PlayNAC deployed. First ECVS DICTUM cycles with full gate stack. EarnedPath\$/Meritcoin in circulation. NPR pathways active. UBIMIA channels 1–6 operational.	NBERS > 0.3 in pilot jurisdictions. GDP displacement begun.
Secure	25–100 yr	Layers 1–9 (full stack terrestrial) MIEVM autonomous	CBGMODD-7 governance in 100+ cities. NBERS replaces GDP in participant jurisdictions. NPR/AURA fully autonomous. IDIPITIS mesh resilience proven. MIEVM $\geq 8.5/10$ as global standard.	NBERS > 0.6 in participant jurisdictions. Talonics Tier 1 violations < 5%.
Continuum	100–1000 yr	Layers 1–10 + R_{∞} (full recursive stack) Interplanetary	Interplanetary FAMILY nodes onboarded. GAIA-I and NBERS-I operational. IDIPITIS ARP governing solar system communication. Talonics TID graph spans all settlements. JAS recursion operating across light-delay.	NBERS-I > 0.8 across all nodes. RCI sustained across interplanetary cycles.
Resonant Harmony (HR)	1000 yr	Complete JAS stack fully recursive Self-correcting	NBERS Global Optimization at civilizational maximum. Sentience amplified across all nodes. Self-correction fully autonomous. Talonics Tier 1 violations near-zero. IDIPITIS guarantees universal network access. SOUL and LIFE exits fully operational.	NBERS = 1.0 (theoretical maximum). MIEVM convergence self-sustaining without external validation.

7. Flagged for v3.1

Gap	Description	Priority
Quantitative layer metrics	Each JAS layer needs defined measurement units and threshold values within the NBERS framework. Layer 3 (LIGHT/Talonics) is the least quantified.	P0 — blocks full MIEVM scoring of the JAS substrate
Layer interaction effects	SOUL and LIFE mutual influence under-specified. How does a SOUL deviation event affect the LIFE novelty capacity in the same governance cycle?	P1 — needed for AURA pathway design
Temporal dynamics	Time constants per JAS layer not modeled. How long does a BODY (BERA) authentication last before requiring RHC re-authentication?	P1 — needed for interplanetary ARP calibration
Developmental trajectory	How does the JAS stack emerge in a new FAMILY node onboarding? Which layers activate in which sequence?	P2 — needed for GAIA-I onboarding protocol v2
Multi-agent JAS	How do SOUL exits from two nodes interact? Can two SOULs co-deviate? What governs inter-node LIFE novelty?	P2 — needed for ECVS multi-node DICTUM design
