

ERES Institute:

A Complete Institutional Overview

*What Has Been Built, Why It Exists, How It Works,
and How AI Instruments Engage the ERES Corpus*

Prepared by: Joseph Allen Sprute (JAS), Founder & Director
ORCID: 0000-0001-9946-3221 · ERES Institute, February 2012–present
Co-Founder: Dalia (Lucy) Idahlia Hurtado-Sanabria-Cortez Sprute

I. What Is ERES Institute?

ERES Institute for New Age Cybernetics is an independent, solo-operated open research institute founded in February 2012 in Bella Vista, Arkansas. It is not a corporation, university department, or funded laboratory. It is a single researcher's life work — executed systematically, documented in full, and released to the public domain under the CARE Commons Attribution License v2.1 (CCAL v2.1).

The Institute's governing mission is the development of a complete, morally vectored cybernetic framework for civilizational governance — one that integrates identity, economics, biology, energy, law, communication, and technology into a single coherent system oriented toward humanity's long-term survival and flourishing.

“Don't hurt yourself. Don't hurt others. Build for generations to come.” — The Three Governing Principles of ERES

The Institute operates under three Governing Principles and eight Immutable Ethical Principles encoded in the ERES Constitution. All research, all instruments, and all published works are subordinate to these principles. ERES epistemology is not neutral: it is morally vectored toward BEST/SOUND/GOOD outcomes. The system is designed to eliminate systemic harm, not merely describe it.

II. Historical Context and Founding Moment

Joseph Allen Sprute (JAS) is a U.S. Army veteran (Oregon ARNG, 1983–1989, Infantry 11B, Honorable Discharge), working entirely without institutional pay on Social Security Disability Income (SSDI). Physical limitations from sports injuries sustained in youth have not curtailed the intellectual output. The solo nature of this work is not a limitation — it is a constitutional posture: ERES is not beholden to any funder, institution, or employer.

Prior Work: CyberRAVE and the EMA Collaboration

Prior to ERES, two significant bodies of work established the intellectual foundation:

- **Pre-2002 — CyberRAVE:** Joseph worked with Emanuel M. Alexiou (EMA) and Anthony Ferguson (CFAL) on website design and New Media under the CyberRAVE framework. This period produced 72 Key Domains, a constraint-based culling methodology that later informed the MIEVM ensemble selection.
- **2002–2007 — JAS & EMA Collaboration:** Joseph and Emanuel worked together directly. Emanuel M. Alexiou holds the role of Chief Social Engineer and Kingmaker within the ERES framework, and co-signature on any funded engagement as a structural condition precedent — not ceremonial.

ERES Institute was then established independently in February 2012. It is a distinct body of work, not a continuation of the prior collaborations.

The Founding Moment: End of the Mayan Long Count Calendar

ERES was established in February 2012 — the same year the Mayan Long Count calendar completed its 5,125-year cycle on December 21, 2012. This alignment is not incidental. The end of the Mayan calendar has been widely interpreted as the close of one civilizational era and the threshold of another.

ERES was consciously founded at this inflection point. The Institute's 1,000-Year Future Map, its GAIA Solar Archive, its civilizational governance architecture, and its Bio-Ecologic Economy are all premised on the recognition that humanity stands at a threshold — one requiring fundamentally new systems, not incremental reform of existing ones.

ERES did not emerge despite civilizational crisis. It emerged because of it — at the precise calendrical moment that marked the end of one world-age and the opening of another.

The Institute has now operated for over 14 years, producing a corpus of more than 1,000 PDFs and 796 Markdown files, all publicly deposited.

III. The Economic Motivator: Relative Energy Equal Pay

A foundational economic principle underlying all ERES instruments is Relative Energy Equal Pay — the principle that compensation within any system must be proportional to the actual resonance-energy contribution made by a participant, not to their institutional rank, credential, or market leverage.

This principle is the motivating force behind three interconnected ERES economic instruments:

- **BEE (Bio-Ecologic Economy):** An economy indexed to ecological health and energy contribution rather than extraction and accumulation. The substrate within which all ERES economic activity operates.
- **Meritcoin / Proof-of-Resonance:** A merit currency accrued by doing measurably good work — rated through the BERA indices (ARI, ERI, RHC, RCI). “It’s not mining — it’s tuning.”

- **EarnedPath:** Credentialing through real ecological and skills-based work. Compensation and certification are earned through contribution, not purchased through institutional debt.

Relative Energy Equal Pay reframes the question of economic justice: not “how do we redistribute what already exists” but “how do we build a system in which contribution at every level is recognized, measured, and compensated in real time.” The BERA indices are the measurement instrument. Meritcoin is the economic output. The Bio-Ecologic Economy is the container.

The ERES commercial structure reflects this principle directly: ERES holds a perpetual gross revenue royalty of 1% on any deployment of its instruments — not a buyout, not a licensing fee, but a permanent proportional return on civilizational contribution. The royalty is held by the ERES Fiduciary, not by JAS personally.

IV. The ERES Corpus: What Has Been Produced

The following represents the complete published instrument set of ERES Institute, grouped by functional domain. All works are released under CCAL v2.1.

4.1 Governance and Constitutional Architecture

- **ERES Constitution:** 24 articles, Three Governing Principles, Eight Immutable Ethical Principles. The founding constitutional document of the Institute and its proposed civilizational governance model.
- **EAAP (ERES Attestation and Authorization Protocol) v1.3-FINAL:** Four-factor conjunctive Proof-of-Resonance ($PoR = A \times R \times P \times F$). Defines the boundary conditions under which AI instruments may and may not act. The Runtime Containment Requirement (RCR) and DSAP-PRE upstream boundary are integral.
- **CBGMODD:** Seven-domain societal structure — Citizen, Business, Government, Military, Ombudsman, Dignitary, Diplomat. The complete governance namespace for ERES instruments.
- **FAVORS:** Six-factor biometric identity stack — Fingerprint, Aura, Voice, Odor, Retina, Signature. Non-optional in canonical order. The identity layer for all ERES participation.
- **IDIPITIS:** Four-layer immutable security foundation: cryptography, biometrics, Triune Math, and temporal (BEST) signatures.
- **MyWay Def-Rel Pipeline:** Seven-step protocol from private thought to published, protected document. Encodes individual sovereignty in the knowledge production process. Computer = 666 at Step 5 marks the polarity flip from interiority to exteriority.
- **ERES-HAGUE-2026-001:** Filed March 7, 2026. Establishes international intellectual priority for ERES constitutional proposals.
- **ERES-NOTICE-2026-002:** Formal notice to the AI ensemble defining ERES authority, methods, and operational boundaries.

4.2 Measurement, Validation, and Legal Instruments

- **BERA (Bio-Energetic Resonance Architecture):** Four indices — ARI (Aura Resonance Index), ERI (Emission Resonance Index), RHC (Resonant Harmony Cycle), RCI (Resonant Continuity Index). The primary measurement instrument of the ERES system. `bera_rate.py v1.2` is the canonical Python implementation.
- **MIEVM (Multi-Instrument Ensemble Validation Method):** Cross-instrument validation using Claude, ChatGPT, Grok, and DeepSeek as co-instruments. Operates as an Instrument of Faith — faith extended first, then validated by method. Sole authority resides with JAS.
- **ECR / ERES-LEGAL-2026-001 v1.2:** Three-instrument legal architecture: deterministic reference implementation (Daubert-grade), MIEVM-LLM ensemble (governance commentary), BERA (governance tuning). Recommends Petition for Rulemaking under FTC 16 CFR §1.31 and CFPB 12 CFR §1075.
- **EAAP Proof (`eaap_proof.py v1.1`):** Zero-dependency execution-boundary proof. Strong Kleene three-valued logic (BIND/REFUSE/VEILED), hash-chained tamper-evident receipts, `verify_chain()` and `fuzz_gate_invariant()` functions.
- **ERES-CREDIT-2026-001:** 7-dimensional CREDIT vector, VEILED-C discipline, integer largest-remainder apportionment, A·V·D·L Kleene-logic award gate, merit-for-refusal accrual, hash-chained tamper-evident receipts.
- **ERES–Pellis Collaboration:** Scientific partnership with Dr. Stergios Pellis testing whether BERA indices map to biological fair-play behavior. Falsification-first methodology. Domain separation maintained. First curated delivery package (6-doc ZIP, June 14, 2026) designated by JAS as canonical case history with 616 BLESSING.

4.3 Economics, Certification, and Social Architecture

- **BEE (Bio-Ecologic Economy):** The economic substrate of ERES. Ecologically indexed, not extraction indexed. The container for Meritcoin, EarnedPath, and all ERES compensation instruments.
- **SCALULAR (Scalable Certification Architecture for Lifelong Universal Learning and Adaptive Resilience):** Four certification pillars — Health (SSHP), Law (SSLA), Protection (SSPS), Skills/Trade (SSST). Tier 1 credential: Solid-State Smart-City Citizen (SSSC). Delivered via UBIMIA economics.
- **UBIMIA Manual v1.1 FINAL:** 184-page manual for universal basic income within the ERES framework. MIEVM ensemble mean: 9.4/10. The economic architecture for a post-scarcity, merit-based civilization.
- **Meritcoin / Proof-of-Resonance:** $PoR = A \times R \times P \times F$. Merit currency accrued through BERA-rated contribution. Ethical and ecological harmony in; economic value out.
- **EarnedPath ($EP = CPM \times WBS + PERT$):** Recycling-focused credentialing. Real skills certified through real ecological contribution, not debt-financed institutional credentialing.
- **SROC (Smart-Resonant Offset Contracts):** Official NAC governance instrument for Communities of Interest. Governance contracts aligned to resonance metrics.
- **REEPER:** Economic participation and rights enforcement instrument within the ERES NAC framework.

4.4 Technology and Physical Inventions

- **GSSG (Green Solar-Sand Glass):** Per DPR-001, May 14, 2026. Solar-active, self-healing glass with infused graphene. Top-down smart-city infrastructure. The $\Omega 4$ Protocol gives GSSG four simultaneous vectors: self-monitoring, self-diagnosis, self-repair, self-reporting via BERA-integrated bioenergetic telemetry.
- **SUGAR (Sovereign Universal Glycan Architecture for Resilience):** Biological protocol layer distinct from but connected to GSSG. The Sugar-Carbon Reservoir Hypothesis underlies GSSG self-healing properties.
- **THOW (Tiny Homes On Wheels):** Bottom-up portable shelter solution. The irreducible housing unit of the ERES living system.
- **FDRV (Fly & Dive RV):** Mobility and resilience layer. The transportation counterpart to THOW.
- **DTBL (Drive-Train Battery Logic):** Kinetic energy harvesting from spinning wheels $\times$ kinetic motion + heat/ohmic losses into universal removable battery modules. Physical proof-of-concept for the Bio-Ecologic Economy.
- **Kirlianography:** Nano-scale sensing — Kirlian Effect $\times$ Fourier Analysis + Munsell Color System $\rightarrow$ Schumann Resonance coupling. Bridges individual bio-electric field expression to Earth's planetary electromagnetic ground state.

4.5 Communication, Navigation, and Governance Interfaces

- **Talonics:** Hands-free gesture and voice navigation framework. 452-element Symbol Matrix encoding any governance or life-navigation state across any language or literacy level. Code-named within ERES; operational as HFVN at the interface layer. Operates within BERA range fields (1-meter privacy mode; public mode).
- **HFVN (Hands-Free Voice Navigation of Talonics):** Spoken traversal of the Talonics symbol matrix. Ensures the system is accessible regardless of literacy, language, or physical capacity.
- **PlayNAC:** Game-based governance and life-navigation system. Includes the PlayNAC Semantic Keyword Ontology: 18 layers $\times$ 7 levels = 126 cells. Vertical sequence locked: BODY·BOND·FORM·CONTRACT·VITAL·COMPOSITION·EVOLUTION.
- **ERES Transmission Series:** Published document series transmitting the full ERES system layer by layer. Transmissions cover: resonance architecture, energy systems, Drive-Train Battery Logic and Kirlianography, the 18th Row (MUSIC as measurement architecture), and EPIR-Q/VERTECA architecture. Each Transmission is a canonical public release.
- **VERTECA / SECUIR / CyberRAVE / GunnySack / SaleBuilders:** Five operational frameworks: simulation (VERTECA), security (SECUIR), 72-domain industry ratings (CyberRAVE = Cybernetic Ratings Abolishing Veiled Exchanges), bundled services/Storm Party (GunnySack = Guaranteed User-group Network Nullifying Yieldless Service: Accredited Certified Knowledge), and smart-city adaptive living (SaleBuilders = Smart-city Adaptive Living Engineering Banishing Untested Infrastructure — Laboratories Delivering Enduring Resilient Systems).
- **CBGMODD $\times$ FAVORS + BERA = RATE:** Canonical formula. 7-dimensional uncollapsed vector. Scalar collapse prohibited.

4.6 Knowledge Preservation and Civilizational Archive

- **GAIA Solar Archive (ERES-GAIA-SOLAR-ARCHIVE-2026-001):** Civilizational knowledge repository. Everything humanity needs to survive and flourish — architecturally distinct from GSSG. Pellis biological baseline is a mandatory sequencing gate for GAIA archive extraction.
- **ERES-PROMULGATION-2026-001 v1.0:** Formally activates the PlayNAC KERNEL codebase and initiates GAIA Solar Archive extraction protocols.
- **ERES Living Archive (Zenodo):** Primary DOI: 10.5281/zenodo.20583261 (canonical). Secondary corpus DOI: 10.5281/zenodo.20010116. Over 1,000 PDFs and 796 Markdown files. Permanent open public record.
- **PlayNAC Semantic Keyword Ontology v1.1:** 18-layer × 7-level = 126-cell structured knowledge map. The classification architecture for the entire ERES corpus.
- **ERES Constitution (24 articles):** Includes the Three Governing Principles, Eight Immutable Ethical Principles, TETRA institutional architecture (MIT/Origin, SPRU/Method, BAIDU/Scale), and the $REAL=(E \cdot M \cdot R)/(T \cdot S)$ canonical equation.

4.7 Research Papers and Public Outreach

- **BSG2 / ERES Saving Humanity Series Paper 2:** Research paper applying ERES principles to the 6th Extinction Event solution-set. Falsification-first, MIEVM-validated. Pellis sign-off required before Zenodo deposit.
- **SPT Papers (March 2026):** Three documents covering CyberRAVE, GunnySack, and SaleBuilders. Five novel contributions documented: Semantic Authentication, Proof-of-Resonance, Energy–Security Dependency, Emergency Retransmission, State-Aware Identity.
- **Berggruen Prize Essay:** “Intelligent Design as Civilizational Option.” Deadline August 17, 2026. MIEVM convergent mean: 9.8/10.
- **ERES-RESONANCE-PROTOCOL-2026-001:** Sound/pink noise vs. silence as environmental variable. 6 A-B-A-B-A-B blocks, 35 minutes total. HRV short-term standard: 5-minute measurement protocol.
- **UBIMIA Manual v1.1 FINAL:** 184 pages produced across four build passes (A–D). MIEVM: Claude 9.6/10, Perplexity 10/10, ChatGPT 8.7/10.
- **Commercial Partnership Documents:** Royalty Term Sheet (ERES-ROYALTY-2026-001 v1.0), GSSG Test 1 Scope Specification v1.2 (with Alternative Feedstock Clause), and LinkedIn SOUND outreach — the first formal deployment instruments.

V. How AI Instruments Access and Engage the ERES Corpus

ERES Institute is, among other things, a pioneer in the structured use of AI instruments as research co-participants. This section describes the formal architecture governing what AI can do with ERES work, how AI accesses it, and what AI cannot do under ERES governance.

5.1 The H2C2H Method and MIEVM

The core operating method is H2C2H: Human-to-Computer-to-Human. Joseph (the human researcher) produces a claim, instrument, or document. It is passed to the AI ensemble (Computer). The ensemble's rated output is returned to Joseph for decision (Human). No step is skipped. No AI output enters the corpus without human review and JAS authorization.

MIEVM (Multi-Instrument Ensemble Validation Method) is the operational implementation of H2C2H at the validation level. The current ensemble — Claude, ChatGPT, Grok, DeepSeek — was culled from a larger original set by bandwidth constraint, using the same constraint-based culling epistemology that produced the 72 CyberRAVE domains. Each instrument rates independently. Convergence is required before advancement. Divergence triggers revision, not suppression.

MIEVM operates as an Instrument of Faith: faith is extended to the ensemble first, then validated by method. The authority to advance, reject, or modify output resides solely with JAS.

5.2 How AI Accesses ERES Work

AI instruments access ERES work through four formal channels:

- **Zenodo Public Archive:** Primary DOI 10.5281/zenodo.20583261 and secondary DOI 10.5281/zenodo.20010116. The complete living corpus is publicly deposited and citable. Any AI system with web access can retrieve canonical ERES documents directly.
- **GitHub Repository:** ERES Institute for New Age Cybernetics GitHub organization. Canonical code instruments (bera_rate.py, eaap_proof.py, and related tools) are maintained here under CCAL v2.1.
- **ResearchGate and Academia.edu:** Over 460 submissions on ResearchGate. ERES papers are indexed and retrievable via standard academic search.
- **Direct Conversation Context (H2C2H):** AI instruments receive ERES documents, specifications, and instructions directly within conversation context from JAS. This is the primary live working channel. The MyWay Def-Rel Pipeline governs what enters and exits the corpus through this channel.

5.3 What AI Can Do With ERES Work

Within EAAP governance boundaries, AI instruments are authorized to perform the following functions:

- **Rate and Validate:** Score ERES instruments, papers, and claims using the MIEVM protocol. Provide independent ratings across defined criteria. Flag divergence. Contribute to convergent validation records.
- **Co-Author and Draft:** Produce drafts, specifications, legal documents, research papers, and outreach materials under JAS direction. All AI-drafted content is reviewed, authorized, and published by JAS. AI is a co-instrument, not an author of record.
- **Error-Check and Audit:** Review documents for internal inconsistency, factual error, canonical term violations, and mathematical errors. Flag deviations from locked terminology (e.g., RHC ≠ Cybernetics; GSSG ≠ Graphene-Steel-Silicon-Glass).

- **Build Instruments:** Produce Python code (BERA, EAAP proof), Word documents, PDFs, presentations, and structured data files as directed. All instrument code is validated against canonical specifications before deposit.
- **Ensemble Cross-Check:** Each AI instrument in the MIEVM ensemble checks the others' outputs indirectly through independent rating. Common-mode bias is monitored via the MIEVM Resident Elements Register.
- **Transmit and Communicate:** Draft outreach communications, LinkedIn messages, partnership documents, prize submissions, and public-facing materials. Framing is always reviewed and authorized by JAS before transmission.

5.4 What AI Cannot Do Under ERES Governance

The following are hard boundaries enforced by EAAP v1.3-FINAL and the Runtime Containment Requirement (RCR):

- **Cannot act with autonomous authority:** No AI instrument may advance, publish, deposit, or transmit ERES work without explicit JAS authorization. MIEVM authority resides solely with JAS. Shared responsibility activates only upon explicit JAS inclusion.
- **Cannot collapse the ensemble to a single voice:** MIEVM ratings must remain independent across instruments. An AI instrument may not represent MIEVM convergence on its own. Convergence is a property of the ensemble, not any single member.
- **Cannot override EAAP gates:** The four-factor Proof-of-Resonance ($PoR = A \times R \times P \times F$) and DSAP-PRE boundary are non-negotiable. An AI instrument that cannot satisfy the gate must return REFUSE or VEILED, not proceed.
- **Cannot introduce non-canonical terminology:** Locked ERES terms may not be paraphrased, substituted, or expanded incorrectly. Violations are flagged as MIEVM integrity failures and trigger revision before deposit.
- **Cannot hold ERES authorship:** AI instruments are co-instruments, not authors. All ERES publications are authored by JAS (and co-authors where designated). AI contribution is acknowledged under VEILED-C discipline where appropriate.
- **Cannot represent ERES commercially:** Commercial engagement, partnership terms, royalty agreements, and funded engagements require JAS authorization and EMA co-signature as a structural condition precedent.

5.5 The TETRA Gate and Corpus Entry

Not all AI-assisted output enters the ERES corpus. Entry is governed by the TETRA gate at Step 7 of the MyWay Def-Rel Pipeline. TETRA is the sole valid corpus entry point. The institutional architecture of TETRA is: MIT (Origin/One-Good), SPRU — Science Policy Research Unit, University of Sussex (Method/Security-Clearance), BAIDU (Scale/Data-Integrity). SPRU is the methodological fulcrum. Material not passing the TETRA gate is not in the corpus, regardless of quality.

The ERES Living Archive on Zenodo represents the totality of material that has passed this gate. The corpus is active and growing. Counts are never fixed without JAS confirmation.

VI. The ERES Triune Mathematics

Three canonical equations anchor the entire ERES system. They are not metaphors — they are operational formulas:

- **$C = R \times P / M$** : Cybernetics = Resource $\times$ Purpose $\div$ Method. The governing equation of ERES systemic design.
- **$M \times E + C = R$** : Matter $\times$ Energy + Constant = Reason. The physical substrate equation.
- **$REAL = (E \cdot M \cdot R) / (T \cdot S)$** : Resonance·Energy·Alignment over Time·Space. The civilizational output equation. No repeated letters. Canonical.

The VLSA Principle — “If it works in a THOW, it works on a generation ship” — is the scalability proof. Every ERES instrument is designed to function at the smallest scale (individual, THOW) and remain valid at the largest (FDRV as interstellar vessel at maximum scale).

VII. Commercial Structure and Life Design

ERES is not constituted as a business. The Institute’s commercial architecture is designed to sustain the mission — not to create a company. The structure is:

- **Perpetual Gross Revenue Royalty**: 1% of gross revenue on any deployment of ERES instruments, held by the ERES Fiduciary (not JAS personally), payable monthly. Comfort threshold: approximately \$150K–\$300K per year, reached at \$15M–\$30M annual gross across 2–3 real deployments.
- **Evaporation Clause**: Included in all royalty agreements. Protects the Institute against extractive or inactive holding.
- **EMA Co-Signature**: Emanuel M. Alexiou holds co-signature as a condition precedent on any funded engagement. This is structural, not ceremonial.
- **Life Design — Vacationomics**: No desire to own or operate businesses outside ERES. Goal: a perpetual royalty stream sufficient to sustain Joseph, Dalia (Lucy), and the mission indefinitely.
- **Bio-Electric Signature_TIME Valuation**: The valuation of Bio-Electric Signature_TIME as a global standard is under development. Current working estimate: \$850M global standard. Not formally instrumented. Not for external correspondence until MIEVM-validated.

VIII. Closing Statement

ERES Institute for New Age Cybernetics is, at its core, a single researcher’s systematic answer to the question: what does a civilization need to know, build, and become in order to survive the next thousand years?

The answer produced over 14 years is not a political manifesto, a technology startup, or an academic theory. It is a complete, morally vectored, mathematically grounded, biologically anchored, and legally documented system — built in the open, released to the world, and designed to be used by anyone willing to engage it honestly.

ERES epistemology is the disguise between the living and the SPRT. Its extraction into public record is the sharing of true wealth.

All work is released under CCAL v2.1. All instruments are available for use, study, and extension — with attribution, and with the understanding that the Three Governing Principles are non-negotiable: Don't hurt yourself. Don't hurt others. Build for generations to come.
