Global AI Governance Assertions: Merging BEST/SOUND/GOOD, CBGMODD, GAIA, and DOFA Under the Concentric S^3C-SLA Architecture

Document ID	ERES-AI-GOVERNANCE-ASSERTIONS-2026-001
Version	0.1 — Draft, single-node Claude closure
Author	Joseph Allen Sprute (JAS), Founder & Director, ERES Institute for New Age Cybernetics
ORCID	0000-0001-9946-3221
Date	June 21, 2026
License	CC-BY 4.0
Validation Status	HYPOTHESIZED — not yet submitted to MIEVM ensemble

Abstract

This document merges five existing, separately-validated ERES instruments — CBGMODD (seven-seat governance), GAIA (Global Actuary Investor Authority), DOFA (Department of Family Amity), BSG/STORM-PARTY (BEST/SOUND/GOOD scoring method), and S^3C-SLA (Smart-City × Solid-State × SCALULAR architecture) — into a single Global-National-Regional-Local governance assertion set for AI oversight. It applies the ERES primitive-testing filter (derived vs. constructed correspondence) to each new linkage proposed rather than asserting scores by declaration. Two domains named in scope — EMCI_REEPER Long-Lat Property-Management and Water/Immigration/Security — are identified as genuine gaps in the existing corpus and are left open pending definition rather than fabricated. The financial-allocation and theological material in ERES-COVENANT-2026-001 is explicitly out of scope for this instrument.

Part I: Inventory of Existing, Already-Validated Architecture

These components are not being re-derived here — they are cited from standing ERES instruments and used as fixed inputs.

Component	Canonical Definition	Status
CBGMODD	Seven-seat governance council: Citizen, Business, Government, Military, Ombudsman, Dignitary, Diplomat. Seat-assignment logic (Free/Incarcerated, Worker/Mgmt, Intern/Representative, NCO/Officer) fully resolved June 2026.	Locked canon
GAIA	Dual reference: institutional backronym = Global Actuary Investor Authority (federated governance body, planetary resource allocation); substrate referent = the biosphere itself, the audit ground the institutional GAIA reports to.	Locked canon
DOFA	Department of Family Amity — CBGMODD-governed, BERA-anchored independent agency proposal with closed accountability loop (IDIPITIS → BERA → CBGMODD → DOFA → receipts → IDIPITIS). Three versions (A: policy, B: academic, C: unified).	Existing instrument
BSG / STORM-PARTY	BEST/SOUND/GOOD scoring and revision method. STORM = Specific, Targeted, Operational, Resonance-aligned, Measurable. PARTY = Proof-of-Resonance, Architecture, RHC, Terminology, Yield. MIEVM Round 1 convergent mean on the Saving Humanity instrument: 9.576/10.0.	Existing instrument, validated
S^3C-SLA	Smart-City × Solid-State × SCALULAR, always-on (24/7) operational substrate. Referenced directly in the Trilogy codebase as SC_OPERATIONAL = (DID, FAVORS, S3C-SLA).	Existing architecture
Three Governing Principles	Don't hurt yourself. Don't hurt others. Build for generations to come.	Locked canon, subordinates all computations below
Triune Math #1	$C = R \times P \div M$ (Cybernetics = Resource × Purpose ÷ Method)	Locked canon

Part II: The Merge — Concentric Governance Assertions

2.1 Structure

The merge proposes a four-tier concentric structure — Global, National, Regional, Local — with each tier governed by the same CBGMODD seven-seat logic, scored by the same BSG/STORM-PARTY method, and reporting upward to GAIA as the actuarial-and-biospheric audit authority. DOFA sits as the family/household-tier instrument feeding into the Local ring.

Each ring uses the same scoring instrument (BSG/STORM-PARTY) so that a Local-tier AI governance assertion and a Global-tier one are commensurable — same rubric, different scope.

2.2 Governing Assertion

Assertion: An AI system or AI-governance policy is admissible at any tier only if it satisfies BSG (BEST: targets the optimal outcome; SOUND: methodology verifiable, claims correctly scoped; GOOD: traceable to the Three Governing Principles) **and** is seated within the CBGMODD structure appropriate to its tier **and** reports its resource/biosphere impact through GAIA.

This assertion is a direct application of existing, already-validated instruments — it does not require new correspondence-testing, because it is composition (using existing tools together) rather than claiming a new derived link between previously unconnected domains.

Part III: Primitive-Testing Filter Results

The following *are* new correspondences proposed in this merge, and are rated honestly rather than assumed to pass.

#	Proposed Correspondence	Derived or Constructed?	Verdict
1	Human-Performance-Enhancement (HPE) qualifies as 9-10 "General-PURPOSE" for S^3C-SLA Optimization	Constructed. HPE has a real canonical slot (named explicitly in the 2023 EMCI document as the OUTPUT of Conflict Resolution), but no measurement criteria exist yet that would let an independent scorer arrive at 9-10 rather than have it assigned.	FAIL — HYPOTHEZED tier. Needs a defined S^3C-SLA metric before scoring, not after.
2	Concentric tiering (Global → National → Regional → Local) should additionally be Fibonacci-structured	Constructed, as stated. No mechanism shown for why Fibonacci ratios (rather than any other scaling sequence) are the equilibrium-producing structure between governance tiers. The four-tier concentric structure itself is sound organizationally; the Fibonacci claim is decorative unless a specific scaling rule is specified (e.g., COI cluster sizes following Fibonacci growth).	FAIL as stated. Concentric structure: pass (organizationally coherent, already used elsewhere in ERES). Fibonacci overlay: open, needs a stated scaling rule to test.
3	GAIA + DOFA + BSG merge into one Global AI Governance Assertions instrument	Derived, in the limited sense that all three already share the same Three Governing Principles substrate and the same BERA/CBGMODD dependency chain — composing them doesn't require inventing a new mechanism, only stacking existing ones at different tiers (per Part II).	PASS as composition. Not a new derivation; a legitimate use of existing validated parts.

Part IV: Open Gaps — Not Fabricated

Two domains named in the original scope have no existing ERES instrument defining them. Rather than generate content to fill the gap, they are logged here as items requiring your input before they can be incorporated:

- EMCI_REEPER Long-Lat Property-Management.** REEPER (Relative Energy Equal Pay Emergency Room) is defined elsewhere in the corpus, but nothing connects it to a Long-Lat property-management layer or to Water/Immigration/Security. No document in Drive currently merges these.

2. **Water/Immigration/Security + Marriage Sovereignty Terrorism/BORDERs.** No existing instrument addresses these as a governance domain. (Note: this is distinct from the Covenant document's marriage-as-personal-relationship material, which remains out of scope here.) If you want this built, it needs its own starting definition — what S/\$ Def-Rel means operationally for BORDERs — before MIEVM scoring would mean anything.
