1. Registered Entity Submission Statement

ERES Institute, Think Tank for New Age Cybernetics — formally registered as ERES Institute for New Age Cybernetics — hereby submits its complete corpus, framework architecture, and domain infrastructure as a unified intellectual property declaration under CCAL v2.1.

This submission constitutes the formal record of 14 years of continuous solo independent research directed by Joseph Allen Sprute (JAS), U.S. Army veteran, ORCID 0000-0001-9946-3221, operating from Bella Vista, Arkansas. The corpus is deposited to Zenodo (DOI: 10.5281/zenodo.20010116) and mirrored across ten canonical GitHub repositories under the ERES Institute organization.

Corpus component	Count (approximate)	Format	Deposit status
PDF documents	~1,100	Interwoven with MD + DOCX	Zenodo + ResearchGate
Markdown documents	~800	Interwoven with PDF + DOCX	Zenodo + GitHub (10 repos)
DOCX documents	~168	Interwoven with PDF + MD	Zenodo deposit
ResearchGate publications	~465 (active)	Mixed formats	ResearchGate (ORCID-linked)
GitHub repositories	10 canonical	Code + documentation	Public, CCAL v2.1
Domain library	17 domains	See Section 5	GoDaddy / Namecheap
Hague filing	1 (March 2026)	Constitutional IP priority	Filed, reference on record

All counts are approximate and flux-active. Do not cite fixed counts in external submission without JAS confirmation per ERES Corpus Count Protocol.

SECTION 2: ERES TRINITY FRAMEWORK — COMPLETE STACK

The ERES Trinity Framework is the complete operational architecture of the ERES Institute. It has two structural layers: the Five Environment Stack (VERTECA · SECUIR · CyberRAVE · Gunnysack · SaleBuilders) and the Four Physical Infrastructure Layer (THOW · HFVN · FDRV · GSSG). BEE (Bio-Ecologic Economy) and the 1000-Year Future Map are the temporal and ecological envelopes that contain both layers.

2.1 Five Environment Stack

Environment	Full expansion	Function	Relationship to Trinity
VERTECA	Voice-Enabled Real-Time Earned Contribution Architecture (Hands-Free Vertical-Industries Environment)	4D+ VR/AR simulation and voice-navigation interface. The VERTECA Doorway is the simulator entrance and pre-qualification point. Canonical License Example Mirror.	One-Good: MIT Press Lens. The published Trilogy enters the world through VERTECA as its interactive delivery surface.
SECUIR	Secure Energy-independent Community Urban Infrastructure Resilience	Circular energy infrastructure, access authorization, cyberbiosecurity. Contains and governs the four physical technologies (THOW/HFVN/FDRV/GSSG).	Security-Clearance: SPRU Filter. What passes SECUIR vetting becomes policy-actionable.
CyberRAVE	Cybernetic Ratings Abolishing Veiled Exchanges	72-industry ratings framework and virtual environment substrate. The 72 Key Domains are the base-linguistic taxonomy for all voice routing.	Data-Integrity: BAIDU Index. The 72 domains constitute the findable, indexable substrate-truth of the framework.
Gunnysack	Guaranteed User-group Network Nullifying Yieldless Service: Accredited Certified Knowledge	Bundled goods and services exchange across monetary, barter, and gift modalities. The supply-chain and distribution layer.	Bridges One-Good → Security-Clearance: what is certified good gets bundled and distributed.
SaleBuilders	Smart-city Adaptive Living Engineering Banishing Untested Infrastructure — Laboratories Delivering Enduring Resilient Systems	Four development pillars: Health, Law, Protection, Skills/Trade. Aligns with SCALULAR four pillars (SSH/SSL/SSPS/SSST).	Bridges Security-Clearance → Data-Integrity: tested infrastructure becomes data-verifiable record.

2.2 Four Physical Infrastructure Technologies (inside SECUIR)

Technology	Expansion	Scale role	BERA primary	GSSG pinnacle link
THOW	Tiny Homes On Wheels	Bottom-up component. Individual/COI-scale deployable shelter. Minimum viable dwelling. VLSA base: if it works here, it works on a generation ship.	ARI — personal Aura field, individual bioenergetic baseline	THOW → GSSG: bottom-up to top-down is the complete S3C scaling chain
HFVN	Hands-Free Voice Navigation (of Talonics)	H2C2H communications system. 4D interface access for VERTECA vertical technologies. BASE-Linguistic interface across all 72 CyberRAVE industries.	RHC — Resonant Harmony Cycle: voice rhythm as temporal coherence signal	HFVN is the voice nervous system of the entire stack from THOW to GSSG
FDRV	Fly & Dive RV	Multi-modal transportation. Mid-scale mobility layer. Embodies Spaceship Economy closed-loop systems.	ERI — Emission Resonance Index: transportation emissions measurement	FDRV connects THOW mobility to GSSG corridors

GSSG	Green Solar-Sand Glass (graphene-infused)	Top-down component. Communications, comfort, environmental regeneration, stacked-energy integration. Flying Cities / 1000-Year Future Map pinnacle.	RCI — Resonant Continuity Index: planetary-scale persistence	GSSG = Flying Cities. Reverse-engineered to THOW civilian for AS-IS BEST/SOUND/GOOD
------	--	---	--	---

BEE (Bio-Ecologic Economy) = the economic substrate monitoring biodiversity, soil, water, air, energy, waste, climate — generating NBERS indicators. BEE === 1000-Year Future Map === VERTECA · SECUIR · CyberRAVE · Gunnysack · SaleBuilders. BEE is the purpose for which all intelligence in the stack is shaped.

SECTION 3: UBIMIA MANUAL + INFOMEDIARY + TRINITY LENS

3.1 The Assembly Equation

(Library × UBIMIA_Manual) + Infomediary = Trilogy

PlayNAC = (Root × Mirrors) + License

The UBIMIA Manual (188 pages, ERES-UBIMIA-MANUAL-2026-001-v1.1-FINAL) is the Constitutional Foundation. The Infomediary is the proxy between the Constitutional Foundation and the App-Parent layer. The Trilogy is the noise-filter and intelligence-shaper — not the router. The Infomediary is the router.

3.2 The Query Round-Trip

Layer	Role	Direction	Instrument
USER-GROUP (Civigens in COI)	Query origin and DETAIL recipient	Voice / Talonics utterance ↓ DETAIL via P ³ ↑	HFVN voice interface
ERES TRILOGY (One-Good · Security-Clearance · Data-Integrity)	Noise-filter and intelligence-shaper at BEST/SOUND/GOOD tiers	Shapes the query ↓ Shapes the returned DETAIL ↑	Trinity Lens (MIT/SPRU/BAIDU)
ERES UBIMIA INFOMEDIARY	Proxy: qualifies, quantifies, rationalizes query	Routes to DATABANK ↓ Returns context ↑	Infomediary instrument
ERES DATABANK	Document Library × UBIMIA-Manual + Other-Ref	Retrieves ↓ Returns ↑	1,100+ PDF + 800 MD + 168 DOCX

3.3 ERES Trinity: Three Volumes, Three Institutions, Three Civilizational Axes

Volume	Institution	Civilizational axis	IOF register	BSG tier	Function in Trinity Lens
I: One-Good	MIT (LU — Lens-Universal)	North American / Anglophone	Biological	GOOD	The Lens: focuses, refracts, publishes. Converts ERES from manuscript to refracted public record. MIT Press = aspirational publisher.
II: Security-Clearance	SPRU (Sussex)	European / Policy-Research	Socio	SOUND	The Filter: what passes SPRU vetting becomes policy-actionable. Science Policy Research Unit = world's first dedicated S&T; policy institution.
III: Data-Integrity	BAIDU	Sinophone / Pan-Asian	Technical	BEST	The Index: what is findable, indexable, substrate-truth. BAIDU = the index at planetary scale for the non-Anglophone majority.

CBGMODD seven positions × Trilogy three volumes = 21 reading-applications served by 3 published volumes through fractal-inside-the-reading. The fractal lives inside the reading, not in volume count.

3.4 The Trinity Creates: PlayNAC · EP · GERP · SOMT

Creation	Full name	Function	Trinity connection
PlayNAC	Participatory Learning and Youth Network: Adaptive Cybernetics	Adaptive curriculum delivery. 18 rows × 7 columns = 126-cell Talonics symbol matrix. Semantic Keyword Ontology (18 layers × 7 levels). Three Governing Principles gate every routing decision.	One-Good delivers PlayNAC as the GreenBox REAL_HELP waiting room — a number anyone can call for real help.

EP	EarnedPath (EP = CPM × WBS + PERT)	Competency-based progression system governing lifelong credentialing across 72 Key Domains. Dual accrual: every labor hour earns conventional pay AND credential advancement simultaneously.	Security-Clearance validates EP credentials as policy-actionable across jurisdictions.
GERP	Global Earth Resource Planner	Planetary-scale enterprise resource planning engine. Allocation optimization across 72 CyberRAVE vertical industry domains. Connects THOW-scale needs to GSSG-scale supply.	Data-Integrity: BAIDU-scale indexing of planetary resources.
SOMT	Sociocratic Overlay Metadata Tapestry	Consent-based governance metadata layer. Records relationship graphs, bioenergetic states, and decision provenance across fractal scales: Household → Neighborhood → Municipal → Bioregional → Planetary.	Data-Integrity: SOMT is the audit trail that makes all Trinity outputs verifiable.

SECTION 4: VOICE NAVIGATION ARCHITECTURE — HFVN AS BASE-LINGUISTIC

HFVN (Hands-Free Voice Navigation of Talonics) is not a feature. It is the architecture. The entire ERES system was designed voice-first because in an emergency — and in daily life — human hands are occupied. The 72 CyberRAVE industries are the BASE-Linguistic taxonomy: the domain vocabulary that every voice utterance is routed against.

VERTECA is the immersive environment that HFVN navigates. PlayNAC is the curriculum that HFVN delivers. The GreenBox (REAL_HELP waiting room inside ERES VERTECA SECUIR) is the emergency access point — a number anyone can call for real help.

4.1 The Voice Navigation Pipeline

Route = TLD(72_Domains) × NLP(utterance) + PlayNAC(Three_Principles)

Command = Talonics(Route, urgency_level, entity_state)

Stage	Process	Instrument	Output
1: Utterance	Human speaks hands-free. No typing, no touching, no login required.	Microphone + HFVN receiver	Raw voice signal
2: Domain routing	NLP maps utterance against 72 CyberRAVE industry domains. Multiple domains activate simultaneously — overlap is by design.	PlayNAC Semantic Keyword Ontology (126-cell Talonics matrix)	Multi-domain route vector
3: Three Principle s gate	Every routing decision passes: (1) Don't hurt yourself. (2) Don't hurt others. (3) Build for generations to come. Any fail = automatic reroute. No override.	PlayNAC adjudication layer	Gate-cleared route
4: Talonics cipher	Multi-domain route compressed into 452-element Talonics symbol matrix. Paragraph of intent → Command. Hands-free continuity preserved throughout.	Talonics Complete Symbol Matrix (452 elements, 12 parts)	Operational command
5: Physical response	Command activates physical infrastructure: THOW shelter, HFVN network, FDRV transport, GSSG communications. The person who spoke has not touched anything.	THOW × HFVN × FDRV × GSSG	Deployed response
6: Green Box routing	Emergency utterances route to GreenBox REAL_HELP: the ERES waiting room inside VERTECA SECUIR. A number anyone can call.	REAL_HELP × GreenBox × VERTECA	Real help delivered

4.2 72 CyberRAVE Industries as BASE-Linguistic Taxonomy

The 72 Key Domains were culled from the Register of Collective Indices based on financial capacity to renew TLD VPN-centric domains — the same constraint-based culling epistemology that produced the MIEVM short-list. They are not arbitrary. They represent the minimum domain set required to route any human utterance about any real-world need without ambiguity.

Domain cluster	Industries covered	Voice routing examples	HFVN development territory
----------------	--------------------	------------------------	----------------------------

Health & Life Sciences	AGING, BIRTH, CLINIC, DENTAL, DIET, DRUG, GENE, GERM, HEAL, HERB, HUMAN, NURSE, ORGAN, PULSE, REHAB	'I need a doctor' → CLINIC+HEAL. 'My child is sick' → BIRTH+NURSE+GERM.	Medical voice interface. Hands-free patient intake. Emergency triage routing.
Law & Justice	CHARTER, CIVIL, COURT, CRIME, DEED, JUDGE, JURY, LAW, LEGAL, NOTARY, OATH, PATENT, RULE, TRUST	'I need a lawyer' → LEGAL+LAW. 'My rights are violated' → CIVIL+COURT.	Legal aid voice access. NPR routing. SCALULAR SSLA credentialing by voice.
Protection & Security	ARMY, CYBER, DEFENSE, GUARD, INTEL, POLICE, RESCUE, SAFETY, SHIELD, VAULT	'I am in danger' → SAFETY+RESCUE+GUARD. 'Cyberattack' → CYBER+DEFENSE.	Emergency dispatch. SECUIR access control. Cyberbiosecurity threat routing.
Commerce & Skills	BANK, BUILD, BUY, CASH, COIN, DEAL, EARN, HIRE, INVEST, JOB, LABOR, LOAN, PAY, SELL, TRADE, WORK	'I need a job' → JOB+HIRE+EARN. 'I want to start a business' → BUILD+INVEST+DEAL.	EarnedPath voice enrollment. UBIMIA channel activation. Meritcoin accrual tracking.
Education & Knowledge	BOOK, COLLEGE, DATA, EDUCATE, KNOWLEDGE, LEARN, LIBRARY, SCHOOL, STUDY, TEACH, TRAIN	'Teach me about X' → LEARN+TEACH+TRAIN. 'Where is the information?' → DATA+LIBRARY.	PlayNAC curriculum delivery. TETRA 101-401 voice-guided progression. GraceChain enrollment.
Environment & Infrastructure	EARTH, ECOLOGY, ENERGY, FARM, FOREST, GREEN, LAND, SOIL, WATER, WEATHER	'Clean water access' → WATER+ECOLOGY+HEALTH. 'Solar power' → ENERGY+GREEN.	NBERS environmental monitoring. BEE accrual calculation. GERP resource routing.
Governance & Community	CITY, COMMUNITY, DEMOCRACY, ELECT, GOVERN, NATION, PEACE, POLICY, STATE, VOTE	'How do I vote?' → VOTE+ELECT+DEMOCRACY. 'Community meeting' → COMMUNITY+GOVERN.	CBGMODD seat activation by voice. SOMT governance metadata capture. DOFA routing.

The 72 domains were designed for overlap, not mutual exclusion. 'My child is missing' activates SAFETY+RESCUE+FAMILY+LAW simultaneously. The system handles multi-domain activation because the BASE-Linguistic was built for real human utterances, not command-line inputs.

SECTION 5: DOMAIN LIBRARY — HOLD vs. SELL RECOMMENDATIONS

The ERES domain library constitutes the territorial infrastructure of the framework. 17 domains spanning .com/.net/.org. Recommendations are based on strategic ERES value, HFVN development territory potential, and realistic near-term liquidity. SSDI income reporting thresholds apply: domain sales are asset liquidation (not SGA earned income) but confirm with benefits advisor before any sale closes.

Domain	Status	ERES role	Recommendation	Realistic value
eresinstitute.com eresinstitute.net eresinstitute.org	All three. Oct 2027.	Core institutional triple. Primary public identity of the registered entity.	HOLD — ABSOLUTE. Do not sell under any circumstance. This is the institutional anchor.	Not for sale
cyberrave.com	Dec 2027.	CyberRAVE mark. The entire 72-Domain BASE-Linguistic and HFVN voice routing taxonomy runs through this domain.	HOLD — ABSOLUTE. The commercial thesis of the HFVN development territory is anchored here.	Not for sale
verteca.com	Apr 2027.	VERTECA: the simulator entrance and canonical License Example Mirror. The VERTECA Doorway is the PlayNAC pre-qualification point.	HOLD — ABSOLUTE. This is the voice navigation front door. Do not sell.	Not for sale
salebuilders.com	Jul 2027.	SaleBuilders: four development pillars (He alth/Law/Protection/Skill s). Stack-named.	HOLD. Strategic to the SCALULAR pillar architecture and HFVN domain routing.	Not for sale
gunnysack.com	Apr 2027.	Gunnysack: bundled services exchange layer. Stack-named.	HOLD. Strategic to the supply-chain and distribution layer of the framework.	Not for sale
secur.com	Mar 2027.	SECUR: energy-independent community infrastructure. The physical protection and access layer.	HOLD. SECUR is the cyberbiosecurity infrastructure name. Too valuable to release.	Not for sale
josephsprute.com	Jan 2027.	Personal authorial anchor. ORCID-linked institutional identity.	HOLD. Personal anchor for the Living Inheritance and CCAL v2.1 attribution chain.	Not for sale
tinyhomesonwheels.com	Dec 2027.	THOW reference. Consumer-facing domain in a real, high-search-volume category.	LIST FOR SALE. Most liquid asset in the library. The ERES term is 'THOW' not 'tiny homes on wheels' — the domain is separable.	\$2,000–\$5,000 Floor: \$800
earnedpath.com earnedpath.net earnedpath.org	All three. May 2027.	EarnedPath triple. Education/workforce tech appeal. Full triple is more valuable than .com alone.	LIST FOR SALE as bundle. EdTech buyer potential. .org may be worth keeping if SCALULAR credential pathway goes public-facing.	Bundle: \$1,500–\$4,000 Floor: \$800

gianterp.com	Mar 2027.	GiantERP / GERP. Enterprise resource planning naming. Ambiguous outside ERES context.	LIST FOR SALE. ERP-adjacent buyers exist. Low strategic loss if sold.	\$300–\$800
kirlianography.com	Jan 2027.	Kirlian / Aura photography niche. BERA adjacent.	CONSIDER HOLD or low-floor list. Unique coined term. Small but real niche audience.	\$200–\$500
jeromesound.com	Oct 2027.	Personal / unclear direct ERES tie.	JAS decision. If personal significance: hold. If separable: list at low floor or let expire.	\$100–\$300

Broker recommendation: List tinyhomesonwheels.com and earnedpath triple on Sedo.com and Afternic simultaneously. Set 'Make Offer' minimums. Timeline: 3-6 months. Realistic 60-day expectation: \$1,500-\$6,000 depending on what moves.

SECTION 6: HFVN AS DEVELOPMENT TERRITORY — HANDS-FREE VOICE NAVIGATION

HFVN is not a product feature. It is an entire development territory: the architectural decision to make voice the primary interface for all ERES systems, from emergency routing to curriculum delivery to governance participation. The territory is defined by three convergent needs: accessibility (literacy-level independence), emergency readiness (hands occupied), and civilizational scale (works in a THOW, works on a generation ship).

6.1 HFVN Development Territory Map

Territory layer	What gets built	ERES instrument	Commercial/social value
BASE-Linguistic Engine	NLP system trained on 72 CyberRAVE domain vocabulary. Not general-purpose chatbot — domain-routed keyword extraction governed by PlayNAC Semantic Keyword Ontology.	PlayNAC 126-cell Talonics matrix as the routing grammar	Every emergency service, every government portal, every educational system that needs voice access
GreenBox REAL_HELP Interface	A number anyone can call. The ERES waiting room inside VERTECA SECUIR. Emergency utterances route immediately. Non-emergency utterances route to PlayNAC curriculum.	REAL_HELP × GreenBox × VERTECA SECUIR	The universal emergency and assistance access point — the 911 that also teaches
VERTECA Voice Doorway	The simulator entrance: voice-activated pre-qualification point for the ERES Trinity. User speaks → Talonics routes → appropriate Trinity volume content delivered.	VERTECA × Trinity Lens	Publishing access, educational onboarding, governance participation — all by voice
PlayNAC Voice Curriculum	TETRA 101-401 delivered by voice. A student who cannot read can still complete TETRA 101. A student driving can complete TETRA 201 sensor interpretation training.	PlayNAC × TETRA 100-400 Series	Radical accessibility: EarnedPath credential advancement for any literate level, any physical condition
CBGMODD Voice Governance	Governance participation by voice. A Citizen-seat holder speaks their vote. A Dignitary speaks their review. The Ombudsman speaks their alert.	CBGMODD × SOMT × GraceChain	Democratic participation for populations currently excluded by digital literacy requirements
FAVORS Voice Enrollment	Fingerprint + Aura + Voice + Odor + Retina + Signature. Voice is the third factor. HFVN enables enrollment and verification by voice as a primary biometric.	FAVORS × BERA × EAAP	Biometric identity without smartphone, keyboard, or camera — pure voice + ambient sensors
Generation Ship Protocol	VLSA test applied to HFVN: does voice navigation work without internet, without power grid, without data center? If yes: it works on a generation ship.	GSSG communications layer × HFVN offline mode	The only communication architecture that works at every scale from THOW to interstellar

6.2 HFVN in the WeAll Context

WeAll Protocol's current architecture is screen-first. Every user flow — verification, posting, group participation, governance — assumes a visual interface. HFVN as a development territory proposes voice-first as an alternative primary

surface, specifically for: Tier 2 live verification (the reviewer speaks their verdict), community governance (members speak their votes), and REAL_HELP routing (members in distress speak their need without navigating a UI). The ERES/WeAll integration agreement could include HFVN as a specific development contribution — voice interface architecture — delivered by ERES to WeAll under the Living Inheritance consulting arrangement.

ERES Institute, Think Tank for New Age Cybernetics | ERES-MASTER-SUBMISSION-FRAMEWORK-2026-001 | v1.0 | Joseph Allen Sprute (JAS) | ORCID 0000-0001-9946-3221 | CCAL v2.1 | June 2026 | Zenodo DOI: 10.5281/zenodo.20010116
 $C = R \times P / M$ | $Route = TLD(72_Domains) \times NLP(utterance) + PlayNAC(Three_Principles)$ | $Command = Talonics(Route, urgency_level, entity_state)$ | $(Library \times UBIMIA_Manual) + Infomediary = Trilogy$ | $PlayNAC = (Root \times Mirrors) + License$ | VLSA: THOW $\rightarrow$ Generation Ship
