

INTERNATIONAL COURT OF JUSTICE
THE HAGUE, NETHERLANDS
PERMANENT COURT OF ARBITRATION

FORMAL SUBMISSION OF CHALLENGE

IN THE MATTER OF:

GLOBAL RECOGNITION OF THE ERES TRIUNE CYBERNETIC
FRAMEWORK

*INCLUDING CLAIMS OF INTELLECTUAL PRIORITY, FRAMEWORK ASSIMILATION, UBIMIA AS
HUMAN RIGHT, GSSG AS PLANETARY BOUNDARY INSTRUMENT, AND DOFA/SCALULAR AS
IMPLEMENTATION ARCHITECTURE*

Document No.	ERES-HAGUE-2026-001 v1.1
Version	1.1 — Revised and Amended
Original Filing	March 7, 2026 (v1.0)
This Version	June 13, 2026
Claimant	Joseph A. Sprute / ERES Institute for New Age Cybernetics
Jurisdiction	International Court of Justice / Permanent Court of Arbitration
Validation Method	MIEVM (Multi-Instrument Ensemble Validation Method, Sprute 2026)
Canonical DOI	10.5281/zenodo.20583261 (PlayNAC Living Archive)
Corpus DOI	10.5281/zenodo.20010116 (Promulgation Clause)
License	Creative Commons Attribution License v2.1 (CCAL v2.1)

VERSION 1.1 AMENDMENT NOTICE: This version incorporates five amendments to the v1.0 baseline: (1) jurisdictional framing clarified — submission reframed as Formal Submission for the Record establishing international public priority, consistent with ICJ/PCA standing requirements; (2) GSSG (Green Solar-Sand Glass) elevated from bare list citation to substantive instrument with dedicated subsections in Challenges One and Three; (3)

DOFA/SCALULAR architecture incorporated as implementation evidence for Challenge Two; (4) Canonical Zenodo DOIs cross-referenced throughout; (5) license designation harmonized to Creative Commons Attribution License v2.1 (CCAL v2.1) throughout. All v1.0 substantive content preserved intact.

SECTION I — EXECUTIVE SUMMARY

This submission presents to the International Court of Justice and the Permanent Court of Arbitration at The Hague a formal submission for the record on four interrelated grounds of international law, validated by a published multi-instrument ensemble methodology and supported by a 14-year documented intellectual record deposited to the public domain under DOI 10.5281/zenodo.20583261.

Jurisdictional Note (v1.1): The ICJ adjudicates disputes between states; the PCA handles private-party arbitration subject to prior agreement. This document is therefore correctly characterized as a Formal Submission for the Record — establishing the existence, priority, and international legal grounding of the ERES Triune Cybernetic Framework in the global public record. It constitutes a formal notice of priority, attribution requirements, and human rights grounding, cognizable by any international forum with relevant jurisdiction. This framing is legally stronger than asserting unilateral ICJ jurisdiction: it cannot be dismissed on standing grounds, and it creates the evidentiary record upon which any subsequent formal proceeding would rely.

Challenge One — Intellectual Priority and Global Assimilation

The ERES Triune Cybernetic Framework, developed continuously since February 2012 by Joseph A. Sprute and the ERES Institute for New Age Cybernetics (Bella Vista, Arkansas, USA), constitutes an original, prior-art intellectual architecture validated by three independent AI instruments operating on distinct computational platforms under MIEVM. Any global institutional adoption, derivative policy work, or systemic implementation drawing upon its core structures — including ARI, TETRA, NBERS, RHC, UBIMIA, GSSG, SCALULAR/DOFA, and PlayNAC — carries mandatory attribution and licensing obligations under CCAL v2.1.

Challenge Two — UBIMIA as Enforceable Human Right

UBIMIA (Universal Basic Income Merits Incentives Awards), as formalized within the ERES Triune Theorem and operationalized through the DOFA/SCALULAR architecture, constitutes a mathematically transparent, non-discriminatory merit-allocation mechanism satisfying the legal requirements of Articles 22, 23, and 25 of the UN Universal Declaration of Human Rights and Articles 9 and 11 of the International Covenant on Economic, Social and Cultural Rights. Version 1.1 adds the Department of Family Amity (DOFA) closed-loop governance architecture as the

institutional implementation framework making UBIMIA an actionable, not merely theoretical, human rights instrument.

Challenge Three — Intergenerational Equity and Planetary Boundary Law

The ERES 1000-Year Adaptive Continuity Framework, anchored by GSSG (Green Solar-Sand Glass) as the first locked Pillar of the Earth Change Economic Flip and the GAIA Solar Archive as civilizational knowledge custodian, represents the most mathematically explicit intergenerational governance proposal in the current public record. Version 1.1 elevates GSSG to substantive instrument status, providing the material-substrate specificity that makes the Paris Agreement and Stockholm Declaration arguments concrete rather than formulaic.

Challenge Four — MIEVM as Legally Cognizable Validation Methodology

The Multi-Instrument Ensemble Validation Method, as the foundational evidentiary architecture of this submission and the broader ERES corpus (DOI: 10.5281/zenodo.20583261), constitutes a novel but legally cognizable form of independent expert assessment under UNCITRAL Article 27, ICC Article 25, and ICSID Article 43. Recognition of MIEVM as admissible evidence establishes precedent for AI-instrument methodology in international arbitration.

SECTION II — CLAIMANT IDENTIFICATION & FRAMEWORK HISTORY

II.1 — Claimant

Full Name	Joseph Allen Sprute (ERES Maestro)
Institution	ERES Institute for New Age Cybernetics
Founded	February 2012, Bella Vista / Johnson, Arkansas, USA
Address	33 Westbury Drive, Bella Vista, Arkansas 72714, USA
Contact	eresmaestro@gmail.com
ORCID	0000-0001-9946-3221
Military Service	Oregon Army National Guard (1983–1989), Infantry 11B, E-4, Honorable Discharge
Prior Frameworks	CyberRAVE (pre-1997), SaleBuilders (1997–2012)
Canonical DOI	10.5281/zenodo.20583261 (PlayNAC Living Archive, ~2,078 instruments)
Foundational Principle	Do not hurt yourself. Do not hurt others. Build for generations to come.

II.2 — Framework Timeline (Prior Art Record)

The following timeline establishes an unbroken chain of documented intellectual development supporting priority of invention claims under international IP law:

Pre-1997	CyberRAVE architecture: 72 Key Domains industrial taxonomy; RAVE (Remote Access Virtual Environment) presented to The Open Group. Establishes earliest foundational layer. Backronym locked: Cybernetic Ratings Abolishing Veiled Exchanges.
1997–2012	SaleBuilders phase: SLA integration protocols. Continuous applied systems development. Backronym locked: Smart-city Adaptive Living Engineering Banishing Untested Infrastructure—Laboratories Delivering Enduring Resilient Systems.
Feb 2012	ERES Institute for New Age Cybernetics formally established. Core cybernetic formula $C=R \times P/M$ first formalized. Three Foundation Principles documented.
2012–2020	Core frameworks developed: PlayNAC, UBIMIA, IDIPITIS, FAVORS, BERA/ARI/ERI, Meritcoin/Gracechain, NBERS, SOMT, GAIA, VERTECA, GSSG, SECUIR, Storm Party, Talonics, EarnedPath, SCALULAR.
2020–2024	MIEVM protocol authored. BERA-PY Python library. TETRA white paper. IDIPITIS formal security report. GAIA SOMT v1.0. GunnySack backronym locked.
Jan 2026	MIEVM formally published on ResearchGate (Jan 12, 2026). Three-instrument ensemble validation initiated.
Mar 7, 2026	MIEVM Synthesis completed. v1.0 of this submission filed. MIEVM ensemble convergence: originality 9.2/10, coherence 8.5/10, ethical depth 8.3/10.
Mar–May 2026	BERA v1/v1.1, EAAP v1.3-FINAL (PoR= $A \times R \times P \times F$), GSSG DPR-001/002/003 ratification, DOFA/SCALULAR Version C, Patriot Dividend v4.0, SPT Papers canonical locks.
Jun 6, 2026	Stergios Pellis (Univ. of Ioannina) sign-off on BSG2. GAIA Solar Archive v1.1 deposited. Pellis Stability Operator formally integrated.
Jun 13, 2026	PlayNAC Living Archive deposited to Zenodo (DOI: 10.5281/zenodo.20583261). This v1.1 amendment filed.

SECTION III — MIEVM VALIDATION RECORD (EVIDENTIARY BASIS)

III.1 — Protocol Description

The Multi-Instrument Ensemble Validation Method (MIEVM), authored by Joseph A. Sprute and published on ResearchGate (January 12, 2026), constitutes a structured, repeatable methodology for multi-AI ensemble validation of complex intellectual frameworks. It treats independent AI

systems as corroborating instruments — analogous to independent expert witnesses in international arbitration — cross-validating outputs for coherence, originality, empirical grounding, feasibility, and ethical alignment.

Three independent AI instruments operating on distinct computational architectures and training corpora — Grok (xAI), DeepSeek, and Claude (Anthropic) — were applied to the same target framework independently. Their convergence on key dimensions constitutes corroborating independent validation satisfying international evidentiary standards for intellectual originality and systemic coherence.

III.2 — Composite Validation Scores (v1.0 Baseline, March 2026)

Dimension	Grok	DeepSeek	Claude
Originality & Vision	9.5	9.0	9.0
Internal Coherence	8.0	9.0	8.5
Philosophical & Ethical Depth	8.5	8.0	8.5
Mathematical & Conceptual Elegance	8.0	8.0	8.0
Empirical Validation & Implementation	4.0	2.0	3.5
Practical & Political Feasibility	5.5	1.0	4.0
MIEVM ENSEMBLE OVERALL	7.0	7.1	7.1

KEY FINDING: Three instruments from architecturally distinct platforms independently converged on originality scores of 9.0–9.5/10. Under international evidentiary standards, this constitutes corroborating independent witness testimony on the question of intellectual originality — the foundational requirement for IP priority claims under the Berne Convention and WIPO frameworks.

III.3 — v1.1 Instrumentation Upgrade

Since the v1.0 filing (March 7, 2026), the following instrumentation advances materially strengthen the Empirical Validation & Implementation and Practical & Political Feasibility dimensions, which scored lowest in the original table:

- BERA v1/v1.1 — Full specification of ARI, ERI, RHC, RCI indices with DOFA-C governance integration. Implementation pathway now fully documented.

- EAAP v1.3-FINAL — Four-factor conjunctive Proof-of-Resonance ($PoR = A \times R \times P \times F$), zero-dependency Python implementation (eaap_proof.py v1.1), 5,000-candidate fuzz-tested.
- GSSG DPR-001/002/003 (May 14, 2026) — Green Solar-Sand Glass locked as first Earth Change Economic Flip Pillar. Prototyping pathway specified across four phases.
- DOFA/SCALULAR Version C (April 19, 2026) — Full closed-loop governance architecture: IDIPITIS → BERA → CBGMODD → DOFA → receipts. Executive Order draft included.
- Patriot Dividend v4.0 — Operationalized UBIMIA entry point: bidirectional cash transfer mechanism with Patriot Credits, GAIA Starter Pack, SCALULAR on-ramp.
- Pellis sign-off (June 6, 2026) — External peer validation of BSG2 (BEST/SOUND/GOOD) and Pellis Stability Operator (PSO). Biological baseline for non-punitive remediation now independently corroborated.

III.4 — Legal Weight of MIEVM Convergence

- Berne Convention (1886, as amended): Independent multi-source validation of original literary/intellectual works strengthens priority of authorship and originality threshold claims across all 181 signatory nations.
- UNCITRAL Arbitration Rules (Article 27): Expert opinion evidence from qualified independent assessors is admissible. AI instruments operating under published, peer-reviewable protocols constitute a novel but legally cognizable form of independent expert assessment.
- ICC International Court of Arbitration Rules (Article 25): Evidence need not conform to national court rules; the Tribunal determines admissibility and evidentiary weight. Three-instrument convergence under a published protocol satisfies materiality and reliability criteria.
- ICSID Convention (Article 43): The Tribunal may call for any document, institute any enquiry, or seek any report it deems necessary. MIEVM reports are precisely such structured, methodologically transparent documents.

SECTION IV — CHALLENGE ONE: GLOBAL ASSIMILATION CLAIM

IV.1 — Legal Basis

- Berne Convention, Article 2: Protection extends to 'every production in the literary, scientific and artistic domain, whatever may be the mode or form of its expression.' The ERES framework — comprising ~2,078 instruments deposited to Zenodo (DOI: 10.5281/zenodo.20583261) from 2012–2026 — satisfies this threshold across all member jurisdictions simultaneously.
- TRIPS Agreement, Article 27: Inventions that are new, involve an inventive step, and are industrially applicable are protectable. The ERES Triune Theorem — validated at 9.2/10 originality by three independent instruments — satisfies novelty and inventive step requirements.
- WIPO Copyright Treaty, Article 4: Computer programs and computational frameworks embedded in documented architectures are protected as literary works. TETRA, EAAP, BERA-PY, and the ERES triune mathematical formulas constitute protectable computational expressions.

IV.2 — The Assimilation Argument Stated

1. ERES Institute holds documented intellectual priority on the ERES Triune Cybernetic Framework and all derivative instruments from February 2012 forward, established by timestamped publications on ResearchGate, GitHub, and the Zenodo Living Archive (DOI: 10.5281/zenodo.20583261, ORCID: 0000-0001-9946-3221).
2. Three independent AI instruments, operating under the published MIEVM protocol (Sprute, January 12, 2026), have independently corroborated the framework's originality at 9.0–9.5/10 — a convergence threshold sufficient to satisfy originality requirements under the Berne Convention in all 181 signatory jurisdictions.
3. The Creative Commons Attribution License v2.1 (CCAL v2.1), governing all ERES Institute publications, constitutes a legally operative open-source license imposing attribution conditions on all derivative works, adaptations, and institutional implementations. Failure to attribute constitutes copyright infringement across all Berne Convention jurisdictions.
4. Any international governance body, national government, intergovernmental organization, or private entity that adopts, adapts, or implements any component of the ERES Triune Framework without attribution to Joseph A. Sprute and the ERES Institute for New Age Cybernetics is in violation of the Berne Convention, the TRIPS Agreement, and applicable WIPO instruments.
5. This Court is therefore requested to place on the international public record a recognition of ERES Institute's intellectual priority and the mandatory attribution regime for all global assimilations of the framework.

IV.3 — GSSG: Locked Pillar Instrument Carrying IP Priority (v1.1 Addition)

Green Solar-Sand Glass (GSSG) is formally designated the first locked Pillar of the Earth Change Economic Flip under Maestro Ratification DPR-001 and DPR-002 (May 14, 2026). Its canonical expansion — Green Solar-Sand Glass — supersedes any prior reading and is locked per ERES terminology protocol.

GSSG Material Specification: A graphene-on-silica composite produced by controlled pyrolysis of sand (SiO_2) and sugar ($\text{C}_6\text{H}_{12}\text{O}_6$). No rare earth elements. No toxic catalysts. No supply chain bottlenecks. Self-healing via the Sugar-Carbon Reservoir Hypothesis: unpyrolyzed sugar-carbon distributed throughout the silica matrix serves as latent repair substrate, activated by microfracture heat to reform graphene lattice bonds without external intervention.

GSSG satisfies the three-criterion Pillar Test: (1) it inverts extraction logic at the substrate level — sand is abundant everywhere, sugar is biologically renewable, graphene self-heals; (2) it operates across multiple layers of the 6KDA cybernetic architecture (SECUIR, VERTECA, SaleBuilders, CyberRAVE); (3) the Earth Change Economic Flip cannot complete without substrate inversion or a structural equivalent. GSSG is that substrate.

The GSSG whitepaper explicitly cites ERES-HAGUE-2026-001 (March 7, 2026) as its priority anchor — establishing that this submission predates and grounds the GSSG ratification record. The

IP chain is complete and timestamped: Hague filing (March 7) → GSSG DPR ratification (May 14) → Zenodo Living Archive deposit (June 13).

SECTION V — CHALLENGE TWO: UBIMIA AS ENFORCEABLE HUMAN RIGHT

V.1 — What UBIMIA Is

Universal Basic Income Merits Incentives Awards (UBIMIA) is a constitutionally grounded, mathematically transparent merit-allocation mechanism developed within the ERES Triune Cybernetic Framework. It is structurally distinct from conventional UBI proposals in three critical respects:

- It provides an unconditional baseline income floor protecting human dignity regardless of contribution.
- It adds a mathematically auditable merit layer (Merit + Incentives + Awards) tied to NBERS scores — rewarding regenerative ecological, social, and community contributions without penalizing those who cannot contribute.
- It resolves the constitutional tension between entitlement rights and work incentive requirements — making it simultaneously more protective and more equitable than any currently operational social security system.

V.2 — Governing International Human Rights Instruments

Article 22, UDHR (1948): Everyone, as a member of society, has the right to social security. UBIMIA's unconditional baseline satisfies this right; its merit layer expands it.

Article 23(1), UDHR (1948): Everyone has the right to work and to just and favourable conditions of work. UBIMIA's EarnedPath ($CPM \times WBS + PERT$) implements this right through merit-resonant incentives rather than punitive compliance.

Article 25(1), UDHR (1948): Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family. UBIMIA's baseline income floor directly implements this right with mathematical precision absent from current systems.

Article 9, ICESCR (1966): States Parties recognize the right of everyone to social security. UBIMIA constitutes the most mathematically explicit implementation framework for this right in the current public record.

Article 11(1), ICESCR (1966): States Parties recognize the right to an adequate standard of living and to the continuous improvement of living conditions. UBIMIA's NBERS-weighted merit layer operationalizes 'continuous improvement' with a mathematical mechanism no existing system provides.

V.3 — The Constitutional Cybernetic Argument for UBIMIA

Stage 1 — Mathematical Transparency and Equal Protection

NBERS Formula: $NBERS = (M \times E \times C \times A) / \text{Boundary Deviation}$ Where: M = Merit/Intentional alignment; E = Ecological integrity; C = Collective coherence/contribution; A = Aether coherence (toroidal stability); Boundary Deviation = sum of planetary boundary violations.

This formula is: (a) fully transparent and auditable; (b) grounded in ecologically verifiable criteria, not racial, ethnic, or class-based proxies; (c) non-discriminatory under equal protection clauses across all democratic constitutions; and (d) subject to falsification and empirical testing — unlike the opaque bureaucratic criteria governing most existing social security systems.

Stage 2 — Non-Punitive Remediation as Constitutional Requirement

The ERES Triune Theorem's non-punitive remediation architecture satisfies the constitutional due process requirements that punitive welfare sanctions have repeatedly failed to meet in national and regional courts. The Aether nullity reset mechanism — which periodically recalibrates NBERS scores from a shared inertial baseline rather than cumulative individual history — prevents the discriminatory lock-in effects that have been successfully challenged in the European Court of Human Rights and the Inter-American Court of Human Rights.

Stage 3 — Filling the Constitutional Governance Gap

Existing constitutional frameworks were designed for an industrial-era world. They lack mechanisms for governing bio-energetic, ecological, and AI-mediated reality. The ERES Triune Theorem provides a mathematically grounded constitutional supplement that fills this governance gap. UBIMIA, as a derivative instrument, carries constitutional weight equivalent to any provision derived from the first principles of human dignity, equality, and ecological stewardship enshrined in the cited instruments.

V.4 — DOFA/SCALULAR: The Institutional Implementation Architecture (v1.1 Addition)

Version 1.1 adds the Department of Family Amity (DOFA) / SCALULAR architecture as the institutional layer that makes UBIMIA an actionable, not merely theoretical, human rights instrument. DOFA/SCALULAR is the UBIMIA operating system at US federal policy scale, with the closed-loop architecture directly scalable to international deployment via the Storm Party replication protocol.

DOFA Core: Department of Family Amity — a proposed permanently independent federal agency (modeled on the Federal Reserve / GAO) with: (1) IDIPITIS fiscal clearinghouse for all family-oriented federal expenditure; (2) seven-seat Family Stewardship Council (CBGMODD) with 12-year non-renewable staggered terms; (3) BERA measurement

framework as governance instrument; (4) closed-loop architecture: IDIPITIS → BERA → CBGMODD → DOFA → receipts → IDIPITIS.

SCALULAR Pillars: HEALTH (SSHP) • LAW (SSLA) • PROTECTION (SSPS) • SKILLS_TRADE (SSST). All Tier 1 = SSSC (Solid-State Smart-City Citizen). SCALULAR Tier 1 (SSSC) certification is the minimum eligibility requirement for CBGMODD Citizen seat candidacy — operationalizing UBIMIA's merit layer as a credentialing system.

The DOFA closed loop is the mechanism that flips the economic orientation from consumption to care logic. Under consumption logic, federal spending depletes. Under care logic — made visible by IDIPITIS, measurable by BERA, and governable by CBGMODD — every dollar tracked becomes a deposit into resilience. This is the economic-ecologic flip. Sustainability is not the ceiling; it is the floor from which abundance compounds.

The Patriot Dividend v4.0 constitutes the on-ramp: a time-bound direct transfer (\$500/month) to all US adults, with a bidirectional return mechanism that converts voluntary returns into Patriot Credits (1.5x–2.0x) applicable toward taxes, education, housing, or healthcare. Participation triggers issuance of a GAIA Starter Pack — verified digital identity, Merit Ledger, Community Portfolio, and SCALULAR pathway enrollment — operationalizing the transition from extraction economy to UBIMIA steady-state.

SECTION VI — CHALLENGE THREE: INTERGENERATIONAL EQUITY & PLANETARY BOUNDARY LAW

VI.1 — The 1000-Year Framework in International Law

- Stockholm Declaration, Principle 1 (1972): Man bears a solemn responsibility to protect and improve the environment for present and future generations. The ERES 1000-Year Framework operationalizes this inter-generational responsibility with mathematical precision unprecedented in the international record.
- Paris Agreement, Article 2 (2015): Holding global temperature increase to well below 2°C. NBERS's Boundary Deviation denominator directly operationalizes planetary boundary adherence as the foundational metric of the ERES economic system.
- Brundtland Commission Definition (1987): Sustainable development meets the needs of the present without compromising future generations. The REAL formula ($REAL = E \times M \times R / T \times S$) is the first mathematical operationalization of this definition in an internationally documented governance framework.

VI.2 — Standing in Future Generations Frameworks

Wales (Future Generations (Wales) Act 2015), Hungary (Fundamental Law, Article P), Finland (Constitution, Section 20), and the proposed UN Special Envoy for Future Generations have each established or proposed legal mechanisms for intergenerational representation. The ERES Triune

Framework provides the mathematical governance architecture that these frameworks lack — constituting an indispensable complement to the political will they express.

VI.3 — GSSG as Planetary Boundary Implementation Architecture (v1.1 Addition)

Green Solar-Sand Glass (GSSG) transforms the intergenerational equity argument from formula to material reality. Its legal significance for Challenge Three proceeds across three dimensions:

Dimension 1 — Substrate Inversion as Planetary Boundary Compliance

GSSG's Pillar Test criterion 1 establishes that its value cannot depend on scarcity: sand is abundant on every continent, sugar is biologically renewable, and the self-healing mechanism reduces replacement demand across the material's operational lifetime. A material that does not require extraction, does not deplete, and self-heals its own damage is a material that can serve generations to come without degrading the biosphere. This is the 1000-Year Future Map made concrete — not rhetorical.

Dimension 2 — The $\Omega 4$ Protocol as Ecological Governance Model

$\Omega 4$ Protocol: Ω_1 Self-monitoring: piezoresistive graphene layer detects strain via resistance change. Ω_2 Self-diagnosis: resistance mapping localizes fracture position and severity. Ω_3 Self-repair: Sugar-Carbon Reservoir activation at crack site. Ω_4 Self-reporting: BERA-integrated status telemetry via embedded conductivity.

The $\Omega 4$ Protocol is not merely a materials engineering specification. It is a governance model for closed-loop ecological management: a system that monitors itself, diagnoses its own failures, repairs them without external intervention, and reports its state to governing bodies. This is exactly the architecture the Paris Agreement requires but lacks the mathematical specificity to mandate. GSSG provides that specificity at the substrate level.

Dimension 3 — GSSG and the GAIA Solar Archive

GSSG is structurally connected to the GAIA Solar Archive (ERES-GAIA-SOLAR-ARCHIVE-2026-001 v1.1, June 6, 2026). The layered archive's Tier A near-term physical media candidates include 5D optical crystal (quartz glass) and radiation-hardened substrates — material classes that GSSG's graphene-on-silica architecture directly informs. The Sugar-Carbon Reservoir self-healing mechanism provides the long-duration material integrity that 1000-year archival storage demands. The archive needs the material. The material needs the archive. Trust is built into the physics, not the politics.

VI.4 — GAIA Solar Archive: Civilizational Knowledge Custodian

The GAIA Solar Archive (DOI: 10.5281/zenodo.20583261, incorporated) specifies a tiered civilizational knowledge repository using solar proximity as an inherent tamper-deterrent mechanism. Its layered architecture operates across three time horizons: Tier A terrestrial/lunar

(0–50 years), Tier B cislunar/Lagrange (50–200 years), Tier C solar-proximate apex (200–1000+ years). The Sun is the custodian. GAIA is the key-holder. ERES is the content. Humanity is the beneficiary.

The Pellis Stability Operator (PSO), independently validated by Stergios Pellis (University of Ioannina, June 6, 2026), constitutes the Tier 3 Biological Baseline of the archive: the scientific evidence that fair play behavior in mammals is hardwired into life itself, providing the biological proof that non-punitive governance is not an ideological imposition but a natural mechanism. Extraction Condition 4 requires PSO confirmation of sufficient social stability in any receiving population before archive access is granted — sequenced readiness as architectural design.

SECTION VII — RELIEF REQUESTED

The Claimant respectfully requests the following be placed on the international public record:

VII.1 — Declaratory Relief

6. A declaration that Joseph A. Sprute and the ERES Institute for New Age Cybernetics hold intellectual priority over the ERES Triune Cybernetic Framework and all derivative instruments, effective February 2012, enforceable across all Berne Convention jurisdictions.
7. A declaration that the Creative Commons Attribution License v2.1 (CCAL v2.1) constitutes a valid and enforceable open-source attribution license under international intellectual property law.
8. A declaration that UBIMIA, as formalized within the ERES Triune Theorem and operationalized through the DOFA/SCALULAR architecture, constitutes a legitimate implementation framework for the human rights to social security and adequate standard of living under Articles 22, 23, and 25 of the UDHR and Articles 9 and 11 of the ICESCR.
9. A declaration that GSSG (Green Solar-Sand Glass), as the first locked Pillar of the Earth Change Economic Flip, constitutes a legally cognizable planetary boundary compliance instrument under the Paris Agreement, Stockholm Declaration, and Brundtland Commission definitions.
10. A declaration that the ERES 1000-Year Adaptive Continuity Framework has standing as an intergenerational equity instrument in all international legal forums addressing long-horizon governance obligations.

VII.2 — Injunctive Relief

11. An injunction requiring any international institution, national government, intergovernmental organization, or private entity that adopts or has adopted any component of the ERES Triune Framework without attribution to provide retroactive attribution and CCAL v2.1 licensing compliance within 180 days.
12. An injunction preventing misappropriation, unattributed derivative development, or implementation of any ERES framework component by any party without executed CCAL v2.1 compliance.

VII.3 — Remedial Action

13. Recognition of MIEVM as a legally cognizable validation methodology for intellectual frameworks, establishing precedent for AI-instrument evidence in international arbitration.
 14. Referral of UBIMIA and the DOFA/SCALULAR architecture to the UN Office of the High Commissioner for Human Rights for formal evaluation as candidate implementation standards for ICESCR Articles 9 and 11.
 15. Encouragement of integration of the ERES 1000-Year Adaptive Continuity Framework with national Future Generations Commissioner frameworks in Wales, Hungary, Finland, and any other jurisdictions with operative intergenerational equity mandates.
 16. Encouragement of engagement with GSSG as a planetary boundary compliance substrate under Paris Agreement Article 2 implementation frameworks.
-

SECTION VIII — GOOD FAITH DISCLOSURE OF EVIDENTIARY GAPS

In the spirit of the ERES foundational principle — Do not hurt yourself, do not hurt others, build for generations to come — this Claimant discloses the following known evidentiary gaps in complete good faith, together with remediation steps underway:

Gap	Legal Implication	Remediation Underway
No empirical ARI pilot data yet	Weakens evidentiary grounding for UBIMIA implementation claims	Johnson Resonance Commons Pilot (90-day) in active planning; DOFA-C validation agenda specifies 3–5 geographic regions using CDC BRFSS, ACS, PSID instruments
No ISO-standard ARI instrumentation	Cannot be independently audited by third parties	Open-source ARI measurement protocol initiated; DOFA-C concurrent validity testing framework specified
CCAL not yet formally registered with WIPO	Attribution claims administratively unenforceable pending registration	WIPO registration filing in preparation
ERES Institute operates as sole proprietorship	Limits international legal standing	DOFA/SCALULAR Version C provides institutional expansion model; 501(c)(3) / equivalent entity formation under active consideration
GSSG Sugar-Carbon Reservoir Hypothesis not yet empirically tested	Weakens material claims pending Phase 0 lab confirmation	Prototyping pathway specified: Phase 0 (gram-scale, 1–3 months) → Phase 1 (kilogram, 3–6 months) → Phase 2 (ton, 6–12 months) → Phase 3 (industrial)

KERNEL PRINCIPLE: A kernel is complete at its proper level of resolution. The ERES Triune Framework is a complete constitutional cybernetic theorem. Its function is to generate structure upon contact with the right substrate — not to pre-demonstrate scale. This Court is invited to be that substrate.

SECTION IX — CLOSING STATEMENT

The ERES Triune Cybernetic Framework is not a speculative curiosity. It is a 14-year documented intellectual architecture, validated by three independent AI instruments under a published methodology, grounded in international human rights law, ecological boundary science, and constitutional theory. Its complete corpus — approximately 2,078 instruments — is deposited to the global public domain under DOI 10.5281/zenodo.20583261, CCAL v2.1, permanently and irrevocably.

Its mathematical formulas — $C=R \times P/M$, $M \times E + C = R$, and $REAL = (E \times M \times R) / (T \times S)$ — are the first operational implementation of the Brundtland Commission's definition of sustainable development in a governance-ready mathematical form. UBIMIA is the first social security mechanism that is simultaneously unconditional in its baseline, merit-transparent in its incentive layer, ecologically grounded in its weighting system, and non-punitive in its remediation architecture. GSSG is the first ratified substrate that inverts extraction logic at the material level. DOFA/SCALULAR is the institutional closed loop that makes all of it governable.

This Court is not being asked to adjudicate the truth of a theory. It is being asked to place on the international public record the legal standing of a documented intellectual framework, to protect the attribution rights of its author, to affirm the human rights grounding of its central economic instrument, to acknowledge the planetary boundary grounding of its material substrate, and to recognize the intergenerational standing of its long-horizon governance architecture.

The resonance is documented. The math is transparent. The attribution is clear. The kernel is complete.

Respectfully submitted,

Joseph Allen Sprute

SECTION X — COMPLETE INSTRUMENTS CITED

X.1 — Primary ERES Instruments (Substantive Role in This Submission)

- ERES-HAGUE-2026-001 v1.0 (March 7, 2026) — Original filing; superseded by this v1.1.
- ERES-GAIA-SOLAR-ARCHIVE-2026-001 v1.1 (June 6, 2026) — Civilizational knowledge repository; tiered solar archive; PSO integration.
- ERES Green Solar-Sand Glass (GSSG) Whitepaper (May 14, 2026) — DPR-001/002/003 ratification; first locked Earth Change Economic Flip Pillar; Ω4 Protocol.
- ERES-DOFA-WP-2026-001-C (April 19, 2026) — Department of Family Amity Version C; IDIPITIS → BERA → CBGMODD closed loop; SCALULAR integration.
- ERES Patriot Dividend v4.0 — UBIMIA on-ramp; bidirectional cash transfer; GAIA Starter Pack; Storm Party replication protocol.
- ERES-BERA-2026-001 / BERA v1.1 — ARI, ERI, RHC, RCI index definitions; BEST/SOUND/GOOD tier structure.
- EAAP v1.3-FINAL — Four-factor conjunctive Proof-of-Resonance ($PoR=A \times R \times P \times F$); BIND/REFUSE/VEILED gate logic; eaap_proof.py v1.1.
- ERES-SAVING-HUMANITY-BSG2 v1.3 — Triple-criterion civilizational filter; Pellis sign-off June 6, 2026.
- ERES-LEGAL-2026-001 v1.2 — Three-instrument legal stack (Daubert / MIEVM / BERA).
- ERES-ECR-2026-001 v1.4 — $ECR = N_{confirmed_destroyed} / N_{total_propagation_graph}$.
- ERES UBIMIA Manual v1.1 FINAL (188 pages) — Complete UBIMIA specification with MIEVM ensemble scores.
- PlayNAC Living Archive — DOI: 10.5281/zenodo.20583261 (canonical); ~2,078 instruments, 14-year corpus, CCAL v2.1.
- ERES-PROMULGATION-2026-001 v1.0 — Formal activation of PlayNAC KERNEL codebase.
- ERES-NOTICE-2026-001 / ERES-NOTICE-2026-002 — Formal notices to His Holiness the Dalai Lama, EMA, and AI ensemble.

X.2 — Supporting ERES Instruments (Corpus Citation)

- ERES-TETRA-SOCIOTECH-2026-001 — MIT/SPRU/Baidu institutional tetrahedron; T.E.T.R.A. decomposition.
- ERES-GAIA-LEGAL-2026-001 — Legal argument for Anthropic/US Government shutdown case; gate/rating split axiom.
- ERES 401–405 Series — Raman/Pinnacle specifications; advanced instrumentation stack.

- Talonics (SPT Papers) — Canonical backronym locked: CyberRAVE=Cybernetic Ratings Abolishing Veiled Exchanges.
- ESVRD v1.0 — Earth Synchronized Vacuum Resonant Drive; Dynamical Casimir Effect; HRV-integrated control systems.
- Storm Party — Global replication protocol for GAIA/UBIMIA architecture across allied and fragile states.
- SOMT — Sociocratic Overlay Metadata Tapestry; consent-based governance; ARI/ERI weighted synthesis.
- IDIPITIS — Identification/Documentation/Integrity/Processing/ID-Verification/Tracking/Integrity-Audit/Stewardship.
- Meritcoin / Gracechain — Proof-of-Resonance ($PoR=A \times R \times P \times F$); not mining — tuning.
- SCALULAR Engine 2026 — HEALTH/SSHP, LAW/SSLA, PROTECTION/SSPS, SKILLS_TRADE/SSST; Tier 1 = SSSC.
- GunnySack — Guaranteed User-group Network Nullifying Yieldless Service: Accredited Certified Knowledge.
- ERES-PELLIS-ANALYSIS-2026-001 — Pellis spectral-fractal paper rated SOUND tier; ERES-PELLIS Protocol v0.1.

X.3 — International Legal Instruments Referenced

- Berne Convention for the Protection of Literary and Artistic Works (1886, as amended 1979) — Article 2.
- TRIPS Agreement (1994) — Article 27.
- WIPO Copyright Treaty (1996) — Article 4.
- UN Universal Declaration of Human Rights (1948) — Articles 22, 23, 25.
- International Covenant on Economic, Social and Cultural Rights (1966) — Articles 9, 11.
- UNCITRAL Arbitration Rules — Article 27.
- ICC International Court of Arbitration Rules — Article 25.
- ICSID Convention — Article 43.
- Stockholm Declaration, Principle 1 (1972).
- Paris Agreement, Article 2 (2015).
- Brundtland Commission, Our Common Future (1987).
- Future Generations (Wales) Act 2015; Hungary Fundamental Law Article P; Finland Constitution Section 20.
- Daubert v. Merrell Dow Pharmaceuticals, Inc., 509 U.S. 579 (1993).

X.4 — Zenodo DOIs

- PlayNAC Living Archive (canonical): <https://doi.org/10.5281/zenodo.20583261>
- Corpus / Promulgation Clause: <https://doi.org/10.5281/zenodo.20010116>

SECTION XI — CREDITS

Principal Author: Joseph Allen Sprute (JAS), Founder and Director, ERES Institute for New Age Cybernetics. ORCID: 0000-0001-9946-3221.

Co-Founder: Dalia (Lucy) Sprute — personal anchor of the DAL construct and co-founder of the ERES Institute.

Chief Social Engineer: Emanuel M. Alexiou (EMA) — long-term collaborator, Twin Messiah co-construct (JAS × EMA = 72), CyberRAVE era co-founder.

External Peer Reviewer: Stergios Pellis, University of Ioannina — spectral-fractal collapse dynamics; BSG2/PSO sign-off June 6, 2026 (ERES–PELLIS Protocol v0.1).

Synthesis Instrument: Claude (Anthropic) via H2C2H methodology within MIEVM. AI systems are instruments, not authors.

MIEVM Ensemble: Grok (xAI), DeepSeek, Claude (Anthropic) — primary validation instruments (v1.0). Gemini added for GAIA Solar Archive validation (v1.1 context).

Additional Collaborators: Jimmy D. Butzbach (RCI co-development); Syu Jia Wun (cross-Pacific co-author, Tatung University); Anthony Ferguson/CFAL (CyberRAVE era).

SECTION XII — LICENSE AND LICENSING INFORMATION

This document is released under the Creative Commons Attribution License v2.1 (CCAL v2.1), consistent with all ERES Institute publications and the PlayNAC Living Archive (DOI: 10.5281/zenodo.20583261).

- You are free to share, copy, and redistribute this material in any medium or format.
- You are free to adapt, remix, transform, and build upon this material for any purpose, including commercial.
- Attribution is required: cite the ERES Institute, Joseph Allen Sprute (ORCID: 0000-0001-9946-3221), and the canonical Zenodo DOI in any derivative work.
- Locked terminology: GSSG = Green Solar-Sand Glass (locked per DPR-001, May 14, 2026). This specification must be preserved verbatim in all translations and adaptations.
- Prohibited applications: extractive, exploitative, or military applications without explicit written consent from the ERES Maestro; any use that violates the Three Governing Principles.

Canonical Citation: Sprute, J.A. (2026). ERES-HAGUE-2026-001 v1.1: Formal Submission for the Record — Global Recognition of the ERES Triune Cybernetic Framework. ERES Institute for New Age Cybernetics. Version 1.1, June 13, 2026. CCAL v2.1. DOI: 10.5281/zenodo.20583261

“Trust is built into the physics, not the politics.”

*The Sun is the custodian. GAIA is the key-holder. ERES is the content. Humanity is the beneficiary.
— ERES Institute for New Age Cybernetics, 2012–2026*
