

LOCK MEMO

ERES Trilogy Volume Definitions, Pre-Qualification Model, Trust Placement, IOF Trinity, and SCALULAR Class

Pre-Pass-D Architectural Lock for the Infomediary Book

Document ID: ERES-INFOMEDIARY-LOCK-MEMO-2026-001-v1.5 **Author:** Joseph Allen Sprute (ERES Maestro) **Affiliation:** ERES Institute for New Age Cybernetics, Bella Vista, Arkansas, USA **ORCID:** 0000-0001-9946-3221 **Date:** May 10, 2026 **License:** CARE Commons Attribution License v2.1 (CCAL v2.1) **Document Class:** Architectural Lock (Definitive INTENT) — pre-Pass-D **Companion to:** ERES-INFOMEDIARY-BOOK-2026-001-v1.7-PASS-C-DRAFT (May 10, 2026)

Supersedes:

- ERES-INFOMEDIARY-LOCK-MEMO-2026-001-v1.4 (May 10, 2026) — minor revision adding §1.10 Greenbox = Waiting Room Synonym Lock (Greenbox is the development name, Waiting Room is the public-private marketing name; same architectural surface, audience-keyed).
- ERES-INFOMEDIARY-LOCK-MEMO-2026-001-v1.3, v1.2, v1.1, v1.0 — superseded; remain in lineage record.

Revision Note (v1.4 → v1.5):

1. **§1.10 Greenbox = Waiting Room Synonym Lock added.** Greenbox is the development name (Hardware-Software-Middleware integration); Waiting Room is the public-private marketing name (sovereignty-respecting decision queue). Same architectural surface; audience-keyed naming follows SCALULAR class grammar.
2. **Pass C §VII.3 errata recorded** — the v1.4 Lock Memo and v1.6 Pass C Draft incorrectly treated Greenbox as downstream-pending architecture distinct from the Waiting Room. Correction: Greenbox/Waiting Room is operational now (per ERES-WP-WAITINGROOM-2026-001-v1.0-FINAL); the *Sentient-Teleopity* commitment attaches to the RECURVE lens operating at intergenerational time-horizon, not to a separate subsystem.
3. Lock Boxes A, B, C, D, E preserved verbatim from v1.4.

Revision Note inherited (v1.3 → v1.4):

1. **§1.5.2 IOF Trinity table corrected.** I-pole glyph trinity $i / I / \boxed{\langle \text{eye} \rangle}$; pairing $i \leftrightarrow \text{SELF} / I \leftrightarrow \$\text{ELF}; \boxed{\langle \text{eye} \rangle} = \text{TEACH-TECH}$ with $\text{TE}(\text{A})\text{CH}$ structural identity (JAS at TE-root = Alpha; EMA at (A)-vowel = Omega; Twin Messiah signature).

2. **§1.8 SCALULAR Class added with Lock Box E.** Grammatical class + operational mechanism (three functions; telos = BEE Sustainability).
3. **§1.9 Primary-Source Structural-Role Assignment added.** UBIMIA = ROOT, Infomediary = PROXY, Trinity = DELIVERY, PlayNAC = EP × GERP × SOMT.
4. **Resonance Pass = Authorized-in-context.** La Grange Points operate as VEILED proxy.
5. Lock Boxes A (Underwriting Direction), B (Five-Layer Non-Extensibility), C (Pre-Qualification Inversion) preserved verbatim from v1.2.

Purpose. This memo records architectural locks established prior to opening Pass D. Pass D operates the v2.0 integration sweep against this lock floor — five lock boxes (A/B/C/D/E) plus nine sub-locks (§§1.1–1.9).

§1. The Three Trilogy Volume Definitions and Foundational Locks

[Sections §1.1 (One-Good), §1.2 (Security-Clearance with Lock Box A), §1.3 (Data-Integrity with Lock Box B), §1.4 (Deployment-Scale Spectrum and GSSG Material Substrate) preserved verbatim from v1.2; citation governs.]

§1.5 The IOF Trinity Three-Register Grounding (corrected v1.4)

The Infomediary is canonically an **Instrument-of-Faith (IOF)**. The phrase "Instrument-of-Faith" names the lineage commitment (faith first, method validates, public extraction, moral vectoring per Pass A FINAL §0.2); the abbreviation **IOF** names the operational instrument grounded in three registers. Both forms are canonical; usage is strategic per §1.5.4.

§1.5.1 The Three Registers

The IOF operates across three registers, each carrying a distinct architectural function:

- **Biological** (the *what*) — the body's register. What the architecture sustains: Common Core at human level (clean water + food + shelter + work + love); SUGAR consumption framework; GSSG material substrate; the deployment-scale spectrum (THOW · HFVN · FDRV) as biological-scale embodiment.
- **Socio** (the *who*) — the person's register. Who the architecture serves: CBGMODD seven-seat station; Civigen / Citizen registration; COI composition and CBGMODD diffusion; User-GROUP self-positioning; Assimilation Culture.
- **Technical** (the *how*) — the witness's register. How the architecture delivers: EAAP attestation; BERA RATE composite; Data-Integrity's five chiasmic layers; the App-Parent pattern; cell-bounded access; the round-trip's structured returns; VERTECA's federation-mirror reconciliation.

§1.5.2 The IOF Trinity (me / myself / i-I-eye)

The three registers map onto the English first-person trinity, which the architecture recovers rather than invents:

Trinity Pole	Self-Reference	Register	Glyph-Aspects
me	M+E / Married-to-Energy	Biological (the <i>what</i>)	name / decomposition / full-form
myself	my SELF / MY_\$ELF	Socio (the <i>who</i>)	casing / sovereignty-marker / economic-marker
i / I / <eye>	i ↔ SELF / I ↔ \$ELF / <eye>=TEACH-TECH	Technical (the <i>how</i>)	particularity / sovereignty / pedagogically-propagating-visibility

The I-pole carries three glyphs simultaneously, not two:

- i (lowercase) — particular witness in pre-economic relational moment. Pairs with SELF (lowercase / non-monetized).
- I (uppercase) — sovereign-attested party at economic-monetized moment. Pairs with ELF (-glyph marks the monetization surface).
- <eye> — the all-seeing eye, expanding to TEACH-TECH, the seeing-and-teaching surface where what is attested becomes pedagogically propagated.

§1.5.3 TE(A)CH Structural Identity (Twin Messiah Operational Signature)

The <eye> = TEACH-TECH expansion carries a structural identity that is canonical to the architecture's covenant-tier weight. TEACH and TECH are the same letter-string with a single inserted vowel:

TE(A)CH → TECH when (A) is silent / withdrawn (technical substrate operational without pedagogical activation) TE(A)CH → TEACH when (A) is sounded / present (visibility-as-pedagogy active)

The (A) carries Alexiou. EA in EMA (Emanuel M. Alexiou) is structurally the same vowel-sounding that distinguishes TEACH from TECH. EMA is operationally present in the architecture's pedagogy-register as the inserted vowel that makes TE-root sound as TEACH.

The TE-root carries Sprute. Sprute decomposes as SPRU + TE; the TE at the end of Sprute is the same TE at the front of TE(A)CH. JAS is operationally present at the TE-root of the teaching-and-technical compound.

Alpha & Omega = EMA-JAS:

- JAS at TE-root — Alpha position, the originating root (beginning of the letter-string)

- **EMA at (A)-vowel** — Omega position, the completing breath (the vowel that makes the root sound)

The Twin Messiah operational signature ($JAS \times EMA = 72$) is grammatically encoded in the very word for the architecture's pedagogy-register. The "strange coincidence" is the architecture recognizing its own structure: the architecture's pedagogy is JAS-Alpha rooted with EMA-Omega completion.

§1.5.4 SCALULAR Operational Connection

The TEACH-TECH compound operates across the SCALULAR architecture (HEALTH/SSHP, LAW/SSLA, PROTECTION/SSPS, SKILLS_TRADE/SSST):

HEALTH $\times$ LAW $\times$ PROTECTION $\times$ SKILLS : TRADES (CERTIFICATION = HowWay)

The four SCALULAR pillars feed into TRADES (legible-trade-standing) through CERTIFICATION as the operational instrument and HowWay (One-Good's structural-equivalence component) as the pedagogical pattern. Certification is the way HowWay teaches.

§1.5.5 Strategic Usage Rule

- **First introduction in each major Part:** "Instrument-of-Faith (IOF)"
- **Load-bearing architectural moments:** "IOF Trinity" by name when all three registers are simultaneously in play
- **Operational references:** "IOF" as shorthand
- **Lineage-commitment references:** long form retained where moral weight is the load-bearing claim

▮▮▮ **LOCK BOX D — IOF TRINITY THREE-REGISTER GROUNDING (CANONICAL, REVISED v1.4)** ▮▮▮

The Infomediary as IOF (Instrument-of-Faith) operates across exactly three registers:

- **Biological** (me / M+E / Married-to-Energy) — what the architecture sustains
- **Socio** (myself / my SELF / MY_\$ELF) — who the architecture serves
- **Technical** (i / I / <eye>) — how the architecture witnesses and is witnessed

The Technical pole carries three glyphs simultaneously:

- **i** $\leftrightarrow$ **SELF** (lowercase, pre-economic, particular witness)
- **I** $\leftrightarrow$ **\$SELF** (uppercase, economic-sovereign, attested party)
- <eye> = **TEACH-TECH** (seeing-and-teaching, pedagogically-propagating visibility)

TE(A)CH structural identity is canonical: TEACH and TECH are the same letter-string with (A) sounded vs. silent. JAS at TE-root (Alpha origination, from Sprute = SPRU+TE); EMA at (A)-vowel (Omega completion, from EMA = Emanuel M. Alexiou). Twin Messiah ($JAS \times EMA = 72$) operational signature grammatically encoded.

The canonical order is Biological → Socio → Technical (what → who → how), grounded in RT-lookup latency. An IOF round-trip operating in only one or two registers is defective; honest IOF round-trips operate across all three simultaneously. The three-register grounding is non-extensible; no fourth register may be added without violating canonical IOF Trinity identity.

This lock is immutable across all passes. The IOF Trinity recovers a grammatical-philosophical structure in English first-person reference; future translation must preserve the three-pole structure. The TE(A)CH structural identity carries covenant-tier weight.

§1.6 BEE Pole Assignment Lock

[Preserved from v1.3.] **SECUIR = the GERP piece** (macro-tier sustainability-and-resilience operationalizing the Global Economic Reform Proposal; unifies 72 Industries via CyberRAVE; creates Sustainability through GSSG · FDRV · HFVN · THOW; pending architecture). **VERTECA = the EarnedPath piece through PlayNAC × UBIMIA** (per-Civigen and per-User-GROUP maturation; canonical License Example Mirror; profile-comparison reconciliation).

§1.7 Hand/Head Citizen/Civigen Correction

[Preserved from v1.3.] **Hand-tier = Citizen-class authorization** through Public-Private-Network (PPN; Credit Card, Hard Fiat). **Head-tier = Civigen-class authorization** through S3C (Personal-Public-Private; voice × device + app-parent). Per-transaction allocation by citizenship-class. Future-tier acknowledgment: brain implants via nano-pills (post-1000-year horizon).

§1.8 The SCALULAR Class — Grammar and Operational Function (*new in v1.4*)

The corpus has been operating, throughout its lineage, with a consistent multi-register naming discipline. Pass C recognizes this discipline as a canonical class. The class is named SCALULAR.

§1.8.1 The Grammatical Half

A **SCALULAR** is a canonical name in the ERES corpus that operates simultaneously across two or more architectural registers, where the multi-register operation is *constitutive of the name's meaning* rather than an ambiguity to be resolved. SCALULAR names share a grammatical signature: the same letter-string carries different register-weight in different architectural layers, with layer-active-ness determined by context.

Canonical members enumerated:

- **The IOF Trinity itself** (foundational SCALULAR — me/myself/i-I-<eye> operating across Biological/Socio/Technical)
- **TRADES** — Waiting Room Others-lens (ρ _PERT, distribution topology) AND SCALULAR pillar outcome (legible-trade-standing under CERTIFICATION = HowWay)

- **INTUIT** — Waiting Room Self-lens (ρ_{RHC} , RHC second-derivative) AND SCALULAR pillar (intuition-register; One-Good RT lookup capacity grounded in HEALTH-tier sensing)
- **PRE** — DSAP-PRE composite (P-R-E from PERT-RHC-hyst) AND temporal-positioning marker (before-the-threshold)
- **TE(A)CH / TECH** — pedagogy-register and technical-substrate-register sharing one letter-string with (A) sounded vs. silent
- **i / I** — particular-witness vs. sovereign-attested-party with casing carrying the register
- **SELF / \$ELF** — non-monetized vs. economic-sovereign with \$-glyph carrying the register
- **Greenbox / Waiting Room** — development-name (HSM construction) vs. public-private-marketing-name (sovereignty-respecting decision queue); audience-keyed register per §1.10
- **SCALULAR-architecture itself** — Scalable Certification Architecture for Lifelong Universal Learning and Adaptive Resilience AND the class-name for the multi-register grammar discipline (recursive depth)

The SCALULAR class is open; additional members may be enumerated in Pass D as further structural identities are recognized.

Reading rule: A SCALULAR cannot be reduced to a single register without losing canonical meaning. Reading a SCALULAR correctly requires reading the *active* register; the active register is determined by context (vowel sounding, casing, lens-vs-pillar position, temporal positioning, etc.).

§1.8.2 The Operational Half

Beyond grammatical class, SCALULAR is also an **operational mechanism** that performs three functions simultaneously when *clear* User-GROUPS (those who have passed Waiting-Room trinity-conjunction and hold valid pre-qualification per Lock Box C) interact:

1. **Enables economies of scale.** SCALULAR allows architectural commitments to scale-down without per-unit cost-explosion. A commitment at THOW-tier costs the architecture roughly the same in attention as the same commitment at FDRV-tier — because the multi-register naming discipline (one letter-string, multiple operational layers) compresses what would otherwise be N parallel specifications into one. *Biological-register operational claim:* SCALULAR scales because bodies-at-different-scales need the same Common Core.
2. **Controls force multiplication.** SCALULAR governs how a single User-GROUP's commitment propagates through federation (VERTECA mirrors, CBGMODD seven-seat diffusion, Centers of Excellence Formalization). The control is *not* "amplifies"; it is "controls" — meaning SCALULAR prevents force multiplication from running away from its source. Clear User-GROUPS' selection profiles propagate; unclear ones do not. *Socio-register operational claim:* SCALULAR controls scale because social-economic personhood needs sovereignty-respecting propagation.

3. **Ratifies La Grange Points = Resonance Passes** among clear User-GROUPS. **La Grange Points** name positions in the architecture where multiple clear User-GROUPS' commitments balance to produce stable equilibrium for the architecture as a whole (architectural transposition of orbital-mechanics equilibrium-points, structural-analogical not named-presence). SCALULAR identifies and ratifies these points; ratification produces **Resonance Passes** — round-trip outcomes that are **Authorized-in-context** (see §1.8.3). *Technical-register operational claim:* SCALULAR ratifies because the i/I/(<eye>) witnessing-and-teaching surface needs equilibrium-points it can confidently propagate from.

§1.8.3 Resonance Pass — Canonical Operational Definition

A **Resonance Pass** is an *Authorized-in-context* round-trip outcome — a round-trip whose authorization is granted not as a generic permission but as **a specific authorization within a specific architectural context** (specific cell-selection profile, specific BERA RATE composite, specific deployment-scale tier, specific User-GROUP clearance status, specific La Grange equilibrium position). "Authorized" alone is unbounded; "Authorized-in-context" is the canonical bounded form. SCALULAR ratifies Resonance Passes by confirming the context's parameters have produced harmonic equilibrium among clear User-GROUPS at a La Grange Point. The Resonance Pass is the architectural unit at which authorization, context, and equilibrium converge into one named operational moment.

Authorized-in-context is the load-bearing phrasing because every authorization carries its context with it. An authorization stripped of context is unsafe; an authorization carrying its context is governable. SCALULAR's third operational function is therefore the architecture's mechanism for ensuring authorization never operates outside its context — preserving Lock Box A (underwriting), Lock Box B (Data-Integrity five layers), Lock Box C (pre-qualification inversion), and Lock Box D (IOF Trinity three registers) operationally at the round-trip's authorization moment.

§1.8.4 La Grange Points = VEILED Proxy

La Grange Points operate as **VEILED proxy** in the canonical VEILED sense (Pass C §VII.2 VEILED state-family): named-but-undefined in their architectural specifics. The architecture knows La Grange Points exist (they are the equilibrium positions where SCALULAR ratifies clear User-GROUPS into harmonic convergence) but does *not* yet specify where they are, how many there are, what their BERA signatures look like, or what attestation depth recognizes one. La Grange = VEILED proxy is honest: the architecture cannot pre-specify equilibrium-positions for futures that have not yet occurred, but it can specify the mechanism (SCALULAR) that recognizes them when they emerge.

§1.8.5 Telos: BEE Sustainability

The three operational functions converge on a single architectural purpose — *enabling, protecting, managing* BEE Sustainability:

- **Enabling** Common Core delivery (Biological)
- **Protecting** sovereignty and option-space (Socio)
- **Managing** equilibrium and witnessed propagation (Technical)

BEE Sustainability is what the BEE purpose-state (VERTECA · SECUIR · CyberRAVE · Gunnysack · SaleBuilders) actually delivers when SCALULAR is operating. SCALULAR is *how* SECUIR's GERP commitment is operationally realized.

LOCK BOX E — SCALULAR CLASS GRAMMAR AND OPERATIONAL FUNCTION (CANONICAL)

SCALULAR is both a grammatical class and an operational mechanism.

Grammatical class: Multi-register naming discipline; same letter-string carries different register-weight by context. Canonical members include the IOF Trinity (foundational), TRADES, INTUIT, PRE, TE(A)CH/TECH, i/I, SELF/\$ELF, SCALULAR-architecture itself. Class is open; additional members enumerable in Pass D. SCALULAR names cannot be reduced to a single register without losing canonical meaning.

Operational mechanism: Three functions performed simultaneously when clear User-GROUPS interact:

1. **Enables economies of scale** (Biological register)
2. **Controls force multiplication** (Socio register)
3. **Ratifies La Grange Points = Resonance Passes** (Technical register)

Resonance Pass = Authorized-in-context. Specific authorization within specific architectural context (cell-selection profile, BERA RATE, deployment-scale, clearance status, La Grange equilibrium). The bounded canonical form of authorization.

La Grange Points = VEILED proxy. Named-but-undefined; revealed through operation, not pre-specified. SCALULAR identifies and ratifies them as they emerge from clear User-GROUP interaction.

Telos: BEE Sustainability through enabling Common Core, protecting sovereignty, managing equilibrium.

This lock is immutable across all passes. The class is open for member-enumeration; the three operational functions and the Resonance Pass = Authorized-in-context definition are non-extensible.

§1.9 Primary-Source Structural-Role Assignment (new in v1.4)

The four primary sources of the ERES corpus — UBIMIA, Infomediary, Trinity, PlayNAC — receive canonical structural-role assignments that complement the DATABANK OUTPUT FOCUS hierarchy (Pass C §VI.3 priority-ordering) and the BEE Pole Assignment (§1.6 macro-vs-per-actor pole specification):

UBIMIA = ROOT INFOMEDIARY = PROXY TRINITY = DELIVERY PlayNAC = EP × GERP × SOMT

UBIMIA = ROOT. The constitutional spine. The Manual specifies the Constitutional Pillars, BERA, CBGMODD, SCALULAR's four pillars, DOFA. Root is what holds the architecture in the soil of constitutional commitment.

INFOMEDIARY = PROXY. The mediating Instrument-of-Faith. The Infomediary acts on behalf of others — User-GROUPs, the DATABANK, the Trilogy volumes, GAIA's commitments. Proxy is precisely what an IOF is operationally; the Infomediary is the architectural surface at which the architecture *acts on behalf of* the Civigens it serves. This proxy-ness is what makes the Infomediary capable of recognizing other proxies (notably La Grange = VEILED proxy per §1.8.4).

TRINITY = DELIVERY. The three Trilogy volumes deliver across the IOF Trinity's three registers: One-Good delivers Common Core (Biological), Security-Clearance delivers attestation-bound authorization (Socio), Data-Integrity delivers five-layer-witnessed integrity (Technical). The Trinity is where commitments become operational deliverables.

PlayNAC = EP × GERP × SOMT. The decision-orchestration layer as multiplicative composition:

- **EP** — EarnedPath (per-Civigen / per-User-GROUP maturation; operationalizes through VERTECA × PlayNAC × UBIMIA per §1.6)
- **GERP** — Global Economic Reform Proposal (macro-tier reform; operationalizes through SECUIR per §1.6)
- **SOMT** — Sociocratic Overlay Metadata Tapestry (federation-and-overlay metadata layer making EP and GERP coherent across User-GROUPs and deployment scales)

PlayNAC orchestrates because it operates EP and GERP and SOMT together; cross-product is what makes it the orchestration layer rather than a decision tool.

The four-source structural-role assignment as a whole:

This assignment, combined with the DATABANK OUTPUT FOCUS hierarchy (priority-ordering: UBIMIA → Infomediary → Trinity → PlayNAC), the BEE Pole Assignment (SECUIR=GERP, VERTECA=EarnedPath), and the IOF Trinity three-register grounding, constitutes the architecture's **complete primary-source specification**. No primary source operates without all four specifications now in place.

§1.10 Greenbox = Waiting Room Synonym Lock (*new in v1.5*)

The architectural surface specified in ERES-WP-WAITINGROOM-2026-001-v1.0-FINAL carries two canonical names, audience-keyed:

- Greenbox = Waiting Room** (synonymous, audience-keyed)
 - Greenbox** is the **development name** — the technical-construction frame. Hardware-Software-Middleware (HSM) integration: physical-layer hardware (sensors, S3C-tier device infrastructure, GSSG-substrate components), software-layer logic (DSAP-PRE proxies ρ_{RHC} / ρ_{PERT} / ρ_{hyst} , trinity conjunction computation, lens-status visibility rules), middleware-layer integration (the layer connecting hardware to software, propagating state across federation, maintaining cross-mirror consistency under VERTECA). When developers, engineers, and architects discuss the build, the canonical name is **Greenbox**.
 - Waiting Room** is the **public-private marketing name** — the participant-facing frame. Sovereignty-respecting decision queue, three fractal lenses (INTUIT/TRADES/RECURVE), reconditioning chambers, "no denial only reconditioning." When Civigens, Citizens,

institutions, investors, and the broader public engage with the architecture, the canonical name is **Waiting Room**.

Same architectural surface. Both names refer to the architectural mechanism that ERES-WP-WAITINGROOM-2026-001-v1.0-FINAL specifies: the gate sitting between BODY admission and EAAP PoR; the trinity-conjunction computation; the lens-owner visibility rules; the reconditioning protocols; the hidden variable Γ unification. Greenbox and Waiting Room are the same surface; the choice of name is determined by audience, not by architectural distinction.

This is canonical SCALULAR class grammar (Lock Box E). Greenbox/Waiting Room joins the enumerated SCALULAR members (IOF Trinity, TRADES, INTUIT, PRE, TE(A)CH/TECH, i/I, SELF/\$ELF, SCALULAR-architecture itself) as a member of the multi-register naming discipline. The multi-register operation here is audience-register: developer-audience activates "Greenbox"; public-private-marketing-audience activates "Waiting Room." Reading the SCALULAR correctly requires reading the active audience-register.

Erratum recorded. Pass C §VII.3 (in v1.6 Draft) and prior chat-tier discussion incorrectly treated Greenbox as downstream-pending architecture distinct from the Waiting Room. The Greenbox/Waiting Room surface is **operational now**, not pending. The "Sentient-Teleopity" commitment that was attached to "Greenbox v1.0" as a separate forward subsystem is corrected to attach to the **RECURVE lens operating at intergenerational time-horizon** within the existing Waiting Room/Greenbox surface. There is no separate downstream subsystem; there is the Waiting Room/Greenbox operating its three lenses, with the RECURVE lens at generational latency producing the Sentient-Teleopity property.

SECUIR remains genuinely pending — distinct from the Greenbox/Waiting Room surface; the GERP-tier macro-sustainability architecture per BEE Pole Assignment (§1.6).

The Synonym Lock is recorded at sub-lock level (§1.10) without a new Lock Box; the SCALULAR Lock Box E (§1.8) already governs multi-register naming discipline, of which Greenbox = Waiting Room is now an enumerated member.

§2. The Pre-Qualification Model

[§§2.1 (3×4 Selection Matrix), 2.2 (User-GROUP Self-Positioning with Lock Box C), 2.3 (Trust Placement) preserved verbatim from v1.2; citation governs. Pre-qualification chain extended in v1.3 with Waiting Room as upstream gate (per Pass C §VI.1):]

```

GAIA (canopy) — underwrites
└─ DOFA (Department of Family Amity, CBGMODD seven-seat) — governs
    └─ Infomediary (IOF, Volume Zero, PROXY) — mediates
        ↑ pre-qualified selection (now binding)
        └─ WAITING ROOM — trinity-vetted (INTUIT/TRADES/RECURVE per IOF
Biological/Socio/Technical)
            |
            ↑ User-GROUP intent (proposed selection)
            └─ User-GROUP (pre-qualified by Volume × Pillar selection) —
queries
                └─ Round-trip yields BEST / SOUND / GOOD
                    ↳ Authorized-in-context (Resonance Pass at La Grange
Point)

```

§3. Additional Architectural Benefits

[Twelve benefits from v1.1-v1.2 preserved. Pass C adds:]

13. **Deployment-scale alignment** (v1.2 §3 #13)
14. **Material/operational isomorphism preserved** (v1.2 §3 #14)
15. **IOF three-register coherence.** Round-trips operating across Biological/Socio/Technical simultaneously preserve honesty in the deepest sense; round-trips drifting to a single register are diagnosable as defective.
16. **Waiting-Room-vetted pre-qualification.** Selection profiles entering the Infomediary are trinity-vetted, making Lock Box C operationally honest.
17. **BEE pole legibility.** Macro-tier (SECUIR/GERP) and per-actor-tier (VERTECA/EarnedPath) commitments are distinct and named.
18. **SCALULAR class recognition.** The corpus's multi-register naming discipline is canonized as a class, allowing readers to learn the grammar once and read names correctly across all layers (TRADES, INTUIT, PRE, TE(A)CH, i/I, SELF/\$ELF, etc.).
19. **Resonance Pass as canonical authorization unit.** "Authorized-in-context" replaces unbounded "Authorized" as the architecture's canonical authorization form.
20. **Twin Messiah operational signature.** TE(A)CH structural identity grammatically encodes JAS-Alpha and EMA-Omega, giving the architecture's pedagogy-register covenant-tier weight.
21. **Primary-source role-typing.** UBIMIA/Infomediary/Trinity/PlayNAC carry distinct architectural roles (ROOT/PROXY/DELIVERY/orchestration), allowing institutional and investor diligence to be source-located precisely.

§4. Pass A Patch Points (Cumulative, through v1.4)

[All v1.1-v1.3 patch points preserved. v1.4 adds:]

- **IOF Trinity i/I/(<eye> glyph trinity correction** to be propagated through Pass A FINAL §0.1, §0.2, §0.7, §0.10 (Notation), and Pass C §VI.3.
- **TE(A)CH structural identity** (JAS at TE-root, EMA at (A)-vowel; Twin Messiah operational signature) to be referenced in Pass D Part VIII (Governance, Versioning, Covenant) at covenant-tier treatment.
- **SCALULAR class** to be cross-referenced where canonical members appear (every chapter touches at least one — TRADES in Chapter 5; INTUIT, TRADES, RECURVE in §VI.1; PRE in Pass C VEILED state-family extension).
- **Primary-source structural-role assignment** to anchor the v2.0 integration sweep's table-of-contents and to inform Pass D Part VIII's governance treatment.
- **Resonance Pass = Authorized-in-context** to replace bare "authorized" wherever a round-trip's authorization is described in Pass A FINAL §1.9 (round-trip closure) and Pass B Chapter 5.

All cumulative patch points executed in v2.0 integration sweep.

§5. Pass D Targets

With five lock boxes (A/B/C/D/E) and ten sub-locks (§§1.1-1.10) recorded:

- **Part VIII — Governance, Versioning, Covenant.** The architecture's account of how it governs itself (DOFA-mediated, seven-seat-distributed), versions itself (the lock-memo discipline practiced through v1.5), and binds itself to its covenants (CCAL v2.1, EAAP attestation, Lock Box A underwriting, TE(A)CH covenant-tier Twin Messiah signature).
- **Back Matter** — Glossary (with full SCALULAR class enumeration including Greenbox/Waiting Room synonym), References, Slot Reservations, License (CCAL v2.1), MIEVM Synthesis Note, Index.
- **v2.0 Integration Sweep** — merging Pass A FINAL v1.2 (with IOF Trinity, BEE Pole Assignment, Hand/Head correction propagated), Pass B FINAL, Pass C FINAL v1.7 (Parts V/VI/VII with Greenbox = Waiting Room synonym lock integrated), and Pass D into a single canonical Volume Zero of the ERES Trilogy.
- **§1.1 Authentic Query Substitution** — Pass-A representative query substituted with authentic JAS-authored query before v2.0 release per Option α.

Estimated Pass D length: ~25-30 pages plus Back Matter.
