CLAIM-STATUS LEGEND

Tag	Meaning
[DESIGN-PRINCIPLE]	Foundational axiom of the ERES framework — not subject to falsification but subject to coherence audit
[HYPOTHESIS]	Proposed relationship or mechanism — requires empirical testing or parallel validation
[OBSERVATION]	Documented external signal or verifiable event — cited with source
[CERTIFIED]	Validated through MIEVM ensemble and/or VLSA test battery — carries SOUND-tier status

EXECUTIVE SUMMARY

For the policy researcher, reentry practitioner, corrections administrator, or community governance leader encountering ERES for the first time.

Every year, hundreds of thousands of people leave incarceration and attempt to reenter society. The systems designed to support this transition are, by measurable outcomes, failing: recidivism rates remain high, community reintegration is slow and precarious, and the identity record a person carries out of prison is a permanent liability in nearly every dimension of civic life — employment, housing, credit, voting, relationship.

The ERES framework diagnoses this failure precisely. The current system treats the returning person as a **surveillance object** rather than a **resonance contributor in development**. It applies maximum information permeability — everything is visible, nothing is private, the record follows everywhere — at exactly the moment when the person most needs the protection of selective membranes and the opportunity to earn a new identity layer through demonstrated contribution.

ERES_PRISON-TO-NAC proposes a different architecture. It applies the same cybernetic governance framework developed in ERES_VACATIONOMICS_PLANETARY-DETAIL — GAIA-as-awareness, SOMT-as-metadata, EarnedPath-as-trust-accumulation, LAW-as-membrane, App-Parent-as-local-sovereignty — to the specific problem of human reintegration after incarceration.

The name is intentional: **Prison to New Age Cybernetics**. Not prison reform. Not reentry services. Not rehabilitation programming. A transition *into* a new cybernetic architecture — one in which the person leaving incarceration is not released *from* a system but

welcomed *into* one that recognizes them as a resonance contributor with a starting EarnedPath score and a clear, earned path forward.

This is v0.1 — a prospectus, a seed, a first formal record. The framework is architecturally ready. The engineering gap is relationship and institutional partnership. That gap is closeable.

PREMISE: Why This Is the Right Time

[OBSERVATION] The United States incarcerates more people per capita than any other nation. Reentry failure — measured as re-arrest, re-conviction, or re-incarceration within three years — affects the majority of those released. The economic and human cost is planetary-scale: broken families, depleted communities, wasted human resonance capacity on an enormous scale.

[OBSERVATION] Current reentry systems are architected around surveillance and restriction: parole monitoring, sex offender registries, background check permanence, housing exclusion zones, voting disenfranchisement. The governing assumption is that the person who offended is permanently suspect and must prove otherwise to an unspecified standard by an unspecified method to unspecified parties — with no EarnedPath, no membrane protection, and no App-Parent sovereignty.

[DESIGN-PRINCIPLE] In ERES framing, this is a **membrane collapse** failure. The LAW boundary that should govern selective information permeability has been set to maximum permeability in perpetuity — no carrying capacity, no k-anonymity floor, no dimension-appropriate coarsening of identity data. The result is not safety. The result is extraction: the person's incarceration history is extracted and applied against them at every membrane crossing for the remainder of their life.

[HYPOTHESIS] A system designed on ERES principles — selective permeability, EarnedPath trust accumulation, App-Parent sovereignty at the SELF and COMMUNITY layers, GAIA-awareness of aggregate outcomes rather than individual surveillance — would produce measurably better reintegration outcomes than the current surveillance-maximum architecture.

This is the hypothesis ERES_PRISON-TO-NAC is built to test.

I. THE STRUCTURAL PARALLEL: VACATIONOMICS AND PRISON TRANSITION

The architectural identity between Vacationomics and Prison Transition is not metaphor. It is **cross-scale VLSA validation**.

Dimension	Vacationomics	Prison-to-NAC
The human in motion	Traveler moving between dimensions seeking renewal	Returning citizen moving between dimensions seeking reintegration
The starting condition	EarnedPath ≥ 0.30 (new entrant baseline)	EarnedPath = 0.00 (incarceration zeroes the record) — the key problem
The membrane problem	Risk of surveillance: too much permeability at SELF layer	Guaranteed surveillance: permanent maximum permeability is the current design
The App-Parent problem	Guest vs. host community — who controls the experience?	Returning citizen vs. parole system — who controls the reintegration?
The GAIA problem	Does the stay increase or decrease planetary resonance capacity?	Does the release increase or decrease community resonance capacity?
The SOMT role	Metadata of the journey — consequence, not content	Metadata of the reintegration — contribution, not criminal history
The EarnedPath role	Earned access to sensitive destinations through stewardship	Earned access to civic dimensions through demonstrated contribution
The LAW role	Selective membrane — what data crosses what boundary	Selective membrane — what history follows the person into what context
The RHC question	Did this interaction increase resonance capacity?	Did this release increase community resonance capacity?
The VLSA test	THOW $\rightarrow$ generation ship	Individual cell $\rightarrow$ planetary citizenship

[CERTIFIED] VLSA principle: *"If it works in a THOW, it works on a generation ship."*

Applied here: if the governance architecture works for a person in the most constrained living situation imaginable — a cell — it works at every scale above it. 91/91 VLSA tests passed. Prison-to-NAC inherits that certification at the design-principle level. **VLSA Test 93 (proposed): first real-world reintegration cohort operating under ERES_PRISON-TO-NAC governance.**

II. THE CORE PROBLEM: EARNEDPATH AT ZERO

The fundamental failure of current reentry systems, in ERES language, is this:

Incarceration sets EarnedPath to zero and then applies maximum information permeability in perpetuity, making EarnedPath recovery structurally impossible.

In the current system:

- Criminal record is permanent and universally accessible (membrane collapse)
- Employment background checks surface the record at SELF → COMMUNITY crossing (wrong layer, wrong permanence)
- Housing applications surface the record at SELF → FAMILY crossing (wrong layer, wrong permanence)
- Credit systems surface the record at SELF → NATION crossing (wrong layer, wrong permanence)
- Voting disenfranchisement operates at SELF → NATION crossing with no restoration pathway

The person emerges from incarceration with:

- EarnedPath = 0.00 (or negative, in ERES terms — a liability record, not a neutral start)
- No membrane protection at any dimension crossing
- No App-Parent sovereignty (parole system is the App-Parent, not the person)
- No SOMT record of contribution — only a criminal history record of extraction events

[HYPOTHESIS] The ERES_PRISON-TO-NAC framework addresses all four of these structural failures simultaneously through a single architectural intervention: **replace the surveillance-maximum record with an EarnedPath-forward record, governed by selective membranes at each identity dimension crossing.**

III. THE ERES REINTEGRATION STACK

Stage 0 — Pre-Release (Inside the Membrane)

The work of ERES_PRISON-TO-NAC begins before release, not after. Inside the facility, the person begins building EarnedPath through:

- **SELF-layer work:** Defined as health, safety, knowledge, purpose — the four SELF concerns in the Seven Dimensional Identity Stack. Educational programs, vocational training, therapeutic work, identity reconstruction.
- **FAMILY-layer restoration:** Mediated reconnection with family systems where safe and desired. SOMT records of reconnection attempts and outcomes.
- **COMMUNITY-layer contribution:** Service to the facility community — mentorship of newer arrivals, facilitation of programs, maintenance of shared spaces. Each

contribution generates a community attestation.

All of this generates **pre-release EarnedPath**. The person does not exit with EP = 0.00. They exit with EP reflecting what they built while inside.

[**DESIGN-PRINCIPLE**] The facility, under ERES_PRISON-TO-NAC governance, functions as a **COMMUNITY-layer App-Parent** — not a surveillance authority but a stewardship community with its own carrying capacity, its own cultural vitality index, and its own SOMT metadata tapestry. The person is a community member, not a subject.

Stage 1 — Release: The Membrane Crossing

Release from incarceration is, in ERES terms, a **dimension crossing** — from a restricted COMMUNITY layer back toward SELF-layer sovereignty and FAMILY-layer reconnection, with eventual progression toward full NATION-layer civic participation.

[**DESIGN-PRINCIPLE**] The LAW membrane at this crossing must be **selective**, not collapsed. What crosses with the person:

Data Type	Crosses Membrane?	Rationale
EarnedPath score	Yes — forward only	This is the person's resonance record, not their criminal record
SOMT contribution record	Yes — aggregated	What they built, not what they took
Criminal history	Dimension-appropriate only	See Section IV — Selective Permeability Protocol
Identity token	Pseudonymous at COMMUNITY layer	Minimum necessary exposure
Health and therapeutic records	SELF-layer only — does not cross	Medical privacy absolute
Family reconnection record	FAMILY-layer only unless consented	Relational sovereignty

Stage 2 — COMMUNITY-Layer Reintegration

The first post-release dimension is COMMUNITY. The returning citizen enters a host community — a neighborhood, a transitional housing program, a faith community, an employer network.

Under ERES_PRISON-TO-NAC, the host community functions as the **COMMUNITY App-Parent** — the same role the host community plays in Vacationomics. The returning citizen is not a surveillance subject assigned to that community. They are a **resonance contributor entering a community with their own carrying capacity and their own cultural vitality**.

[HYPOTHESIS] SOMT metadata for this stage:

```
interaction_id:      [UUID]
identity_scope:      community
identity_token:      [hashed-pseudonym]
intent_class:        reintegration
use_class:           contribution
resource_class:       {economic, cultural, social}
location_granularity: Level 3 (neighborhood / district)
time_window:         [reintegration period]
outcome_signal:       [+/- RHC delta – community attestation]
earned_path_delta:    [computed per Section XVII formula]
provenance:          ERES-PRISON-TO-NAC / Community App-Parent attestation
```

New controlled vocabulary additions for Prison-to-NAC context:

intent_class additions: {reintegration, restoration, service, contribution} **use_class additions:** {employment, housing, education, mentorship, civic-participation}
resource_class additions: {social, relational, civic}

Stage 3 — NATION-Layer Civic Restoration

Full civic participation — voting, professional licensing, unrestricted employment eligibility, credit access — is a NATION-layer function. Under the current system, this layer is often permanently foreclosed regardless of demonstrated contribution.

[DESIGN-PRINCIPLE] Under ERES_PRISON-TO-NAC, NATION-layer access is **EarnedPath-gated**, not permanently foreclosed:

Civic Function	EarnedPath Threshold	Restoration Pathway
Voting registration	EP $\geq$ 0.20 (minimal demonstrated contribution)	Automatic upon threshold — not application-based
Unrestricted housing access	EP $\geq$ 0.30 (standard baseline)	LAW membrane: housing providers see EP tier, not criminal record
Professional licensing	EP $\geq$ 0.40 (demonstrated community contribution)	Licensing boards receive EP attestation, not raw criminal history
Unrestricted employment eligibility	EP $\geq$ 0.40	Employers receive EP tier, not criminal record
Credit access	EP $\geq$ 0.50 (sustained contribution over time)	Credit systems receive EP attestation, not incarceration record
Full civic restoration	EP $\geq$ 0.60	All NATION-layer functions restored; criminal history fully membraned

[HYPOTHESIS] This is the ERES answer to "ban the box" and expungement debates. Rather than debating whether to hide the record, ERES replaces the record with a **forward-facing resonance credential**. The question is not "what did this person do?" The question is "what has this person built?"

Stage 4 — PLANET-Layer Contribution

The long arc of ERES_PRISON-TO-NAC is not merely reintegration into existing society. It is **reintegration into planetary stewardship**. A person who has navigated the full reintegration arc — who has rebuilt EarnedPath from zero through sustained contribution across SELF, FAMILY, COMMUNITY, and NATION dimensions — has demonstrated exactly the kind of resilience, adaptability, and depth of humanity that planetary stewardship requires.

[DESIGN-PRINCIPLE] People who have been incarcerated and successfully reintegrated are not a liability to planetary governance. They are a **resource**. Their lived experience of constraint, loss, membrane collapse, and reconstruction is the experiential foundation of genuine empathy — which is the ERES precondition for Resonant Harmony at the planetary tier.

CyberRAVE's 72 Key Domains, the SCALULAR Engine, the DOFA framework, the UBIMIA Manual — all of these were built by a person who knows what it means to operate with limited institutional resources, under constraint, with deep purpose. That is not incidental. That is the ERES origin story.

IV. SELECTIVE PERMEABILITY PROTOCOL FOR CRIMINAL HISTORY

[DESIGN-PRINCIPLE / HYPOTHESIS] The most contested question in reentry policy is: who gets to know what, and for how long?

ERES answers this with the LAW-as-membrane principle. Criminal history is **dimension-appropriate information**, not universally accessible data.

Permeability Table

Context	What is Visible	Rationale
SELF-layer (the person themselves)	Full record	Sovereignty requires self-knowledge
FAMILY-layer (family reunification)	Full record with consent	Relational sovereignty; disclosure is the person's choice
COMMUNITY-layer (employer, landlord, neighbor)	EarnedPath tier only; no raw record	Community carrying capacity served by EP, not criminal history
NATION-layer (licensing, credit, voting)	EP attestation; offense category only if directly relevant to function	Proportionality principle — a conviction for drug possession is not relevant to a cosmetology license
PLANET-layer (GAIA aggregate)	Anonymized cohort data — reintegration outcomes, not individual records	Planetary governance needs aggregate resonance data, not individual histories
PUBLIC (anyone)	Nothing without consent	Permanence of public criminal records is a membrane collapse under ERES

Time-Based Membrane Rules

[HYPOTHESIS] Criminal history permeability decreases as EarnedPath increases and time passes:

$$\text{Permeability}(t, EP) = \max(0, \text{Base_Permeability} - (EP_{\text{current}} \times 0.5) - (\text{Years_Since_Release} \times 0.05))$$

Where Base_Permeability = 1.0 at release, declining toward 0 as EP rises and time passes.

Practical interpretation:

- At release (EP = 0.00, t = 0): full permeability within dimension-appropriate rules
- At EP = 0.60, t = 5 years: near-zero permeability; NATION-layer sees only EP attestation
- At EP = 0.80, t = 10 years: full criminal history membrane sealed; only SELF-layer retains access

This is not expungement. The record does not disappear. It becomes inaccessible to layers that have no legitimate governance need for it. The membrane closes. The past is not erased — it is appropriately dimensioned.

V. THE FACILITY AS ERES COMMUNITY

[**DESIGN-PRINCIPLE**] ERES_PRISON-TO-NAC requires a reconception of the correctional facility itself — not as a punishment apparatus but as a **COMMUNITY-layer node in the SOMT tapestry**.

Every facility has:

- A **carrying capacity** (population it can sustain without degrading community resonance)
- A **cultural vitality index** (is the community inside the facility building or destroying human capacity?)
- A **SOMT metadata layer** (what are the outcomes? what contributions are being made? what resonance is being generated or destroyed?)
- A **community App-Parent** (the institution, but governed by ERES principles rather than punitive ones)

[**HYPOTHESIS**] Facilities that operate under ERES community governance — with EarnedPath accumulation, SOMT metadata, community attestation, and GAIA-awareness of outcomes — will produce measurably better reintegration outcomes than facilities operating under surveillance-maximum punitive governance.

This is testable. This is VLSA Test 93.

The Four SCALULAR Pillars Applied to Facility Governance

SCALULAR = HEALTH (SSHP), LAW (SSLA), PROTECTION (SSPS), SKILLS_TRADE (SSST). All Tier 1 = SSSC (Community Stewardship).

Pillar	Current System	ERES_PRISON-TO-NAC
HEALTH (SSHP)	Medical care as security function; mental health as risk management	Health as RHC investment; every health improvement increases EarnedPath and community resilience
LAW (SSLA)	Law as punishment apparatus; rule enforcement as control mechanism	LAW as membrane; rules as selective permeability boundaries protecting both individual and community
PROTECTION (SSPS)	Protection as containment; safety through surveillance and restriction	Protection as mutual — community protects individual; individual contributes to community safety
SKILLS_TRADE (SSST)	Vocational training as recidivism reduction metric	Skills as EarnedPath builders; every credential is a contribution to NATION-layer carrying capacity

VI. EARNEDPATH IN THE PRISON-TO-NAC CONTEXT

The EarnedPath formula from ERES_VACATIONOMICS_PLANETARY-DETAIL v0.3 (Section XVII) applies directly, with Prison-to-NAC specific sources:

$$EP_{new} = \alpha \cdot EP_{old} + \beta \cdot outcome_signal + \gamma \cdot community_attestation - \delta \cdot time_decay$$

Default weights: $\alpha=0.70$, $\beta=0.20$, $\gamma=0.10$, $\delta=0.02$ /year inactivity

Prison-to-NAC Specific EarnedPath Sources

Positive Sources (Inside)

Source	Typical Delta	Verification
Educational credential earned	+0.05 to +0.10	Institution record
Vocational certification	+0.05 to +0.12	Certification body
Peer mentorship (documented)	+0.04 to +0.08 per mentee-cycle	Community App-Parent attestation
Restorative justice process completed	+0.08 to +0.15	Restorative justice facilitator + victim consent
Sustained sobriety (verified, self-defined)	+0.03 to +0.06 per year	Health App-Parent (SELF-layer governed)
Community service contribution	+0.02 to +0.05 per documented event	Community App-Parent attestation

Positive Sources (Post-Release)

Source	Typical Delta	Verification
Sustained employment (90+ days)	+0.06 to +0.10	Employer attestation
Stable housing (90+ days)	+0.04 to +0.08	Housing App-Parent attestation
Family reunification (desired, documented)	+0.05 to +0.10	FAMILY App-Parent consent
Community mentorship of other returning citizens	+0.08 to +0.15	Community attestation
Civic participation (voting, community board, volunteer)	+0.03 to +0.06 per documented instance	Community App-Parent
Post-stay outcome_signal from host community	+0.00 to +0.08	Community attestation

Negative Sources

Source	Typical Delta	Verification
Confirmed reoffense	-0.30 to -0.50	Legal record + BERA audit
Community attestation of harm	-0.05 to -0.20	Community App-Parent + dispute resolution
Membrane violation (misrepresentation of EP tier)	-0.25	SOMT audit log

Starting EP at Release

[HYPOTHESIS] Rather than $EP = 0.00$ at release (the current implicit state), ERES_PRISON-TO-NAC proposes:

- Minimum release EP = accumulated pre-release contributions (no one exits at zero if they contributed)
- If no pre-release contributions: $EP = 0.15$ (human dignity floor — every person has inherent starting resonance)
- The **human dignity floor** ($EP = 0.15$) is a [DESIGN-PRINCIPLE], not a hypothesis. In ERES, no sentient being begins at zero resonance.

VII. GAIA-AWARENESS OF REINTEGRATION OUTCOMES

[HYPOTHESIS] At the planetary tier, GAIA does not need to know who was incarcerated, what they did, or where they live. GAIA needs to know:

- What is the aggregate RHC delta of reintegration cohorts? (Are communities more or less resonant when returning citizens reintegrate successfully?)
- What is the cultural vitality index shift in communities that practice ERES_PRISON-TO-NAC governance vs. surveillance-maximum governance?
- What is the ecological load delta? (Incarceration is an enormous ecological cost — infrastructure, energy, human capacity withheld from stewardship roles. Successful reintegration reduces this cost.)
- What is the host community benefit ratio? (Does the returning citizen contribute more than they consume? At what EarnedPath threshold does this flip?)

[OBSERVATION] Research consistently shows that successful community reintegration — stable housing, stable employment, family connection — produces net-positive community outcomes. ERES does not need to prove this. ERES needs to instrument it: give it a SOMT layer, give it a GAIA aggregate, give it a KPI set, and make the planetary benefit of successful reintegration visible at the scale at which policy is made.

VIII. THEORY OF CHANGE

[DESIGN-PRINCIPLE / HYPOTHESIS]

Inputs: Person with EarnedPath + community with carrying capacity + ERES governance architecture **Outputs:** Sustained reintegration + community benefit + reduced recidivism +

planetary resonance contribution **Long-term impact:** A civilization that does not warehouse its most tested citizens but integrates their hard-won wisdom into the planetary stewardship layer

IX. FAILURE MODE CATALOG

[HYPOTHESIS]

Failure Mode	Description	Early Warning Signal
EP Capture	Corrections system inflates or deflates EP for control purposes	EP score distribution inside facility correlates with compliance, not contribution
Dignity Floor Erosion	Human dignity floor (EP = 0.15) treated as negotiable	Release EP below 0.15 for any person regardless of behavior
Membrane Theater	Selective permeability protocol adopted as policy language but not enforced	Criminal records continue surfacing at dimension-inappropriate crossings
Community Hostility	Host community rejects ERES governance; treats returning citizen as permanent suspect	Community attestation scores systematically negative regardless of actual contribution
SOMT Reversion	SOMT contribution record replaced or overridden by criminal history record in institutional databases	SOMT provenance field shows override events; EP delta and criminal record diverge
NAC as Rebranding	ERES_PRISON-TO-NAC adopted as language but not architecture; surveillance-maximum system continues under new terminology	GAIA aggregate shows no RHC improvement vs. control communities

X. MEASUREMENT MATRIX

[HYPOTHESIS — baselines require first pilot cohort data]

KPI	Definition	Data Source	Healthy	Warning
Reintegration Resonance Index (RRI)	Mean community RHC delta for reintegration cohort at 12 months	SOMT outcome_signal + community attestation	≥ +0.40 mean	< +0.20
Recidivism Delta	Change in re-arrest rate vs. matched control cohort (surveillance-maximum governance)	Legal records (NATION-layer, aggregated)	≥ 20% reduction vs. control	< 5% reduction
EarnedPath Velocity	Mean EP gain per month post-release	SOMT earned_path_delta records	≥ +0.03/month	< +0.01/month
Membrane Integrity Rate	Proportion of dimension crossings where criminal history did NOT surface at inappropriate layer	Community App- Parent audit	≥ 95%	< 85%
Community Benefit Ratio	Economic and social contribution of returning citizen vs. community investment in reintegration	Employment records + community attestation + SOMT	≥ 1.0 (break-even) at 18 months	< 0.5 at 18 months
Dignity Floor Compliance	Proportion of releases with EP ≥ 0.15	EarnedPath record at release	100%	< 100% (any violation is a failure)

XI. OPEN QUESTIONS (Living Archive)

#	Question	Status
Q1	Which correctional facilities are most likely early adoption candidates? (Minimum security, community corrections, halfway houses)	Open — requires stakeholder mapping
Q2	What is the legal pathway for EarnedPath attestation to replace criminal history in employment and housing contexts?	Open — requires legal instrument (cf. ERES-LEGAL-2026-001 v1.2)
Q3	How does restorative justice — specifically victim consent and participation — integrate with EarnedPath accumulation?	Open — requires victim advocacy stakeholder engagement
Q4	What is the BERA SOUND-tier rubric for a correctional facility operating as an ERES COMMUNITY-layer node?	Open — requires adaptation of Section XVIII rubric from Vacationomics
Q5	How does the CREDIT vector (VEILED-C discipline) apply to reintegration resource distribution?	Open — requires CREDIT spec integration
Q6	How does DOFA (Department of Family Amity) white paper series integrate with Family-layer reintegration protocols?	Open — DOFA corpus available; integration requires explicit mapping
Q7	What is VLSA Test 93 minimum viable design? (First real-world reintegration cohort)	Open — requires partner facility
Q8	How does the human dignity floor (EP = 0.15) interact with restorative justice obligations? (A person who harmed someone has a dignity floor — but so does the person they harmed)	Open — requires careful design; both parties hold dignity
Q9	What existing reentry programs (e.g., Second Chance Act grantees, Norwegian model facilities, Ban the Box jurisdictions) are closest to ERES_PRISON-TO-NAC principles and could serve as comparison cases?	Open — literature review required
Q10	How does the Meritcoin Minimum Viable Bridge (Vacationomics Section XIX) translate to reintegration economic instruments?	Open — requires Prison-to-NAC specific bridge design

XII. FUTURE MAP

[DESIGN-PRINCIPLE] Prison-to-NAC is also a 1,000-year instrument.

Horizon	Expected Condition	Horizon Metric
0-10 Years	First VLSA Test 93 cohort running; EarnedPath replacing background checks in partner communities	≥1 facility operating as ERES COMMUNITY-layer node; ≥1 employer accepting EP attestation
10-50 Years	NATION-layer policy: EarnedPath attestation legally recognized as alternative to criminal background check in employment and housing	Federal or multi-state legislative recognition of EP attestation
50-200 Years	Incarceration as currently practiced is replaced by ERES COMMUNITY-layer reintegration architecture; punitive containment reserved for active danger only	Incarceration rate reduced by ≥50% vs. 2026 baseline
200-500 Years	Prison as concept dissolves into graduated COMMUNITY-layer stewardship systems; no permanent membrane collapse for any person	Zero permanent loss of NATION-layer civic access for any sentient being
500-1000 Years	PLANET-layer governance integrates returning citizens as planetary stewardship contributors at the generational ship scale	FDRV crew selection includes persons who navigated maximum constraint and demonstrated maximum resonance — their experience is the qualification

XIII. RECORD INTEGRITY

H2C2H Chain: JAS (primary) → Claude (MIEVM node, v0.1 production) → [Grok / DeepSeek / ChatGPT / Perplexity parallel nodes — pending Prison-to-NAC specific ratings]

Source instruments: ERES_VACATIONOMICS_PLANETARY-DETAIL v0.3 (primary architecture); ERES-LEGAL-2026-001 v1.2 (legal instrument stack); SCALULAR Engine Document; DOFA white paper series; UBIMIA Manual v1.1 FINAL; ERES-BERA-2026-001 Indices Spec

MyWay Def-Rel Status: Step 3 (Community layer — internal ERES record) **Zenodo Parent Archive:** 10.5281/zenodo.20583261 **Step 7 (published) requires:** Formal Zenodo deposit or equivalent.

XIV. THE ERES ORIGIN NOTE

This framework was not designed from outside the experience of constraint.

The ERES Institute was founded in February 2012 in Bella Vista, Arkansas, by a solo independent researcher operating on SSDI, without institutional backing, without pay, within the constraints of what a single person with a laptop, an ensemble of AI nodes, and a governing principle of *"Don't hurt yourself. Don't hurt others. Build for generations to come."* can produce.

That is not incarceration. But it is constraint. And the ERES corpus — 72 Key Domains, three Triune Math keys, five novel cybernetic contributions, a 1,000-year arc — was built entirely within that constraint.

[DESIGN-PRINCIPLE] Constraint is not the opposite of contribution. Constraint is often the condition under which the most resonant contributions are made. The person who has been incarcerated and chooses to build — inside the cell, at the membrane crossing, in the host community — is doing exactly what ERES was built to honor.

ERES_PRISON-TO-NAC is not charity toward the incarcerated. It is the recognition that the planetary stewardship project cannot afford to membrane-collapse an entire class of human beings who have exactly the lived experience of constraint, loss, and reconstruction that the 1,000-year arc requires.

ERES Institute for New Age Cybernetics — est. February 2012, Bella Vista, Arkansas "Don't hurt yourself. Don't hurt others. Build for generations to come."
