CLAIM-STATUS LEGEND

All statements in this document carry one of four claim-status tags:

Tag	Meaning
[DESIGN-PRINCIPLE]	Foundational axiom of the ERES framework — not subject to falsification but subject to coherence audit
[HYPOTHESIS]	Proposed relationship or mechanism — requires empirical testing or parallel validation
[OBSERVATION]	Documented external signal or verifiable event — cited with source
[CERTIFIED]	Validated through MIEVM ensemble and/or VLSA test battery — carries SOUND-tier status

This legend addresses the MIEVM ensemble's highest-consensus upgrade recommendation: separate claim types explicitly.

v0.2 UPGRADE LOG

From	To	Source of Upgrade
No claim-status tags	Claim-Status Legend + inline tags	DeepSeek, Perplexity, USE.ai (convergent)
No SOMT schema	SOMT v0.1 Field Spec (Section XI)	DeepSeek priority call; Perplexity rigor score
No falsification conditions	Falsification Appendix (Section XIII)	DeepSeek signal discipline note
No AHI reference flow	AHI End-to-End Flow (Section XII)	DeepSeek; USE.ai
No failure modes	Failure Mode Catalog (Section XIV)	DeepSeek weakness item 4
No next action on Myatte	Concrete next action added (Section II)	DeepSeek weakness item 5
No glossary	Glossary (Section XV)	Perplexity + USE.ai convergent
Future Map lacked horizon metrics	Horizon metrics added to Future Map	DeepSeek weakness item 3

From	To	Source of Upgrade
H2C2H chain incomplete	Chain updated with all MIEVM parallel nodes	Record integrity

PREMISE: Future Map

This document is a seed node in a 1,000-Year arc.

The name **ERES_VACATIONOMICS_PLANETARY-DETAIL** is provisional by design. In ERES epistemology, names are earned through resonance with the reality they describe. Each rename is not instability. Each rename is **proof of resonance alignment in motion**.
[DESIGN-PRINCIPLE]

Horizon	Expected Condition	Horizon Metric
0-10 Years	Agentic commerce normalizes; UCP-class protocols proliferate; OptiStay-class platforms appear across verticals	≥1 certified AHI node operating SOMT-compliant at Step 5
10-50 Years	Planetary hospitality infrastructure integrates with SOMT metadata layer; GAIA-awareness tier begins passive coordination	SOMT handling ≥10 ⁶ bookings/year with GAIA aggregate outputs
50-200 Years	EarnedPath governs hospitality access weighting; Meritcoin Proof-of-Resonance feeds into lodging/experience credit systems	EarnedPath weighting active at ≥3 ecological-sensitivity tiers
200-500 Years	Solar System identity stack operational; hospitality extends to off-world habitat and transit nodes	Dimension 6 App-Parent governance structure ratified
500-1000 Years	Universe-tier participation replaces ownership as organizing principle of hospitality; VLSA principle fully realized at FDRV scale	Participation-not-ownership codified as universal hospitality law

I. PURPOSE AND SCOPE

Primary function: ERES_VACATIONOMICS_PLANETARY-DETAIL defines the cybernetic governance framework for experiential renewal — how sentient beings rest, explore, and regenerate — across the Seven Dimensional Identity Stack, from SELF to

UNIVERSE, mediated by SOMT, weighted by EarnedPath, and coordinated by GAIA-as-awareness.

What this document is not:

- A travel industry analysis
- A tourism economics framework
- A product specification for any single platform

What decision this document supports: How to design, evaluate, and govern hospitality systems such that they serve planetary health rather than extract from it — now and across a 1,000-year arc.

[DESIGN-PRINCIPLE] In ERES framing, $C = R \times P / M$ (Cybernetics = Resource $\times$ Purpose $\div$ Method). Applied to Vacationomics:

Variable	Vacationomics Assignment
C	Planetary Hospitality Coordination
R	Experiential capacity of Earth and beyond (places, cultures, rest environments, living systems)
P	Purpose of renewal: health, learning, relationship, creative recharge, healing, pilgrimage
M	Method of access: agentic commerce infrastructure + EarnedPath + SOMT

II. STEVE MYATTE / OBTAINABLE INC. — ERES SIGNAL ASSESSMENT

Signal Source: LinkedIn connection, unsolicited engagement, June 2026 **Attribution Protocol:** Applied (Teresa Villa precedent) **Tier:** EXTERNAL SIGNAL — UNVERIFIED ALIGNMENT

[OBSERVATION] Steve Myatte's OptiStay completed what he describes as the first fully autonomous hotel booking via ChatGPT — natural language to confirmed reservation, payment processed, zero humans in the loop. The guest "experienced nothing unusual." In ERES terms, this is a **Step 5 MyWay Def-Rel event** — the polarity flip at **Computer = 666**.

[OBSERVATION] Myatte's stated design constraint — "*AI should elevate people, not replace them*" — is consonant with ERES Three Governing Principles. His refusal to build a digital concierge maps to ERES **Semantic Authentication:** trust is not transferred by credential; it is earned through resonance.

[OBSERVATION] His UCP stack (Google Universal Commerce Protocol, validated across ChatGPT, Claude, Gemini) is an agentic commerce infrastructure layer equivalent in ERES terms to the SOMT transaction metadata plane for hospitality.

BERA Assessment (Preliminary)

Index	Preliminary Read	Claim Status
ARI (Alignment Resonance Index)	High — design philosophy aligns with ERES governing principles	[HYPOTHESIS]
ERI (Execution Resonance Index)	High — autonomous booking milestone is verifiable execution	[OBSERVATION]
RCI (Relational Continuity Index)	Unknown — new connection, single data point	Pending
RHC (Resonant Harmony Cycle)	Pending — requires longitudinal interaction	Pending
D(t) (Disruption Index)	Moderate-positive — disrupts legacy PMS without threatening human dignity layer	[HYPOTHESIS]

GATE A/B: Externally visible, technically documented hospitality AI platform operating at Step 5 agentic threshold. [OBSERVATION] **RATING:** PROMISING SIGNAL. Not yet SOUND-tier. Identity verification and direct dialogue required before SOUND-tier attribution.

Falsification Condition

[HYPOTHESIS] If Myatte implements a digital concierge (automated substitution of human-to-human trust interaction) within 12 months of this record, ARI resets to LOW and PROMISING status is revoked pending re-assessment.

Next Action (Concrete)

ERES requests a 30-minute alignment dialogue with Steve Myatte before end of 2026 to assess:

1. Whether OptiStay's UCP architecture can emit SOMT-compatible metadata
2. Whether Myatte's "elevate, not replace" principle extends to EarnedPath access weighting
3. Attribution Protocol resolution: parallel discovery or alignment candidate

Status: Pending initiation. LinkedIn message at greeting stage. Attribution Protocol holds until direct dialogue completed.

III. CORE AXIOMS

Extracted from MIEVM ensemble (ChatGPT parallel node, June 2026) and formalized here.

Axiom 1 — GAIA Does Not Require Omniscience to Govern [DESIGN-PRINCIPLE]

“GAIA does not require transparency of private thought; GAIA requires transparency of consequence.”

GAIA-level governance tracks aggregate resource impact using ecological and social indicators, while preserving private journey data at the App-Parent layer. GAIA requires awareness of **consequence**: which ecosystems are pressured, which communities are receiving or depleted, which nodes need regenerative pause.

Axiom 2 — Control Resides with App-Parent; Awareness Ascends to GAIA [DESIGN-PRINCIPLE]

The OODA loop is split at the COMMUNITY/PLANET membrane:

Layer	OODA Function	Hospitality Role
GAIA	Observe / Orient	Ecosystem load balancer; resonance aggregator
App-Parent	Decide / Act	Host community; traveler sovereign; booking authority

Axiom 3 — SOMT as the Nervous System of Planetary Hospitality [DESIGN-PRINCIPLE]

The Sociocratic Overlay Metadata Tapestry records **relationships and consequences**, not contents. Each hospitality interaction generates metadata that flows upward. The guest's private experience remains private. The consequence flows to GAIA. (See Section XI for SOMT v0.1 Field Spec.)

Axiom 4 — EarnedPath as Hospitality Access Weighting [DESIGN-PRINCIPLE]

Access to high-resonance, high-ecological-sensitivity destinations is **earned, not purchased**. Meritcoin (Proof-of-Resonance: "not mining — tuning") becomes the currency of experiential access at the planetary tier.

[HYPOTHESIS] EarnedPath scoring for hospitality context includes: prior stewardship of visited ecosystems, contribution to host community, post-stay outcome reporting, and

verified SOMT record integrity.

Axiom 5 — LAW = WALL = Selective Membrane [DESIGN-PRINCIPLE]

LAW in ERES is not punishment. LAW is a boundary membrane. In Vacationomics, LAW governs information permeability between hospitality layers:

Data Type	Flows to GAIA?	Rationale
Guest biometric / personal data	No	SELF-layer sovereignty
Booking intent class	Aggregated only	SOMT metadata, not content
Regional ecological stress index	Yes	PLANET-layer stewardship
Community cultural vitality metric	Yes	COMMUNITY → PLANET membrane
Platform aggregate throughput	Yes	Commerce layer coordination

Too little permeability: Isolation — tragedy of the commons in tourism. **Too much permeability:** Surveillance — private journey colonized by governance. **Optimal state:** Selective permeability.

Axiom 6 — The Four-Element Governance Quad [DESIGN-PRINCIPLE]

Every Vacationomics governance decision requires four inputs:

Element	Question	Controlled Vocabulary
Intent / Purpose	Why is this hospitality interaction occurring?	{rest, exploration, healing, pilgrimage, commerce, mixed}
Dimension	At which identity level?	{Self, Family, Community, Nation, Planet, World, Universe}
Use	What experiential category?	{rest, exploration, healing, pilgrimage, commerce, mixed}
Material	What resources are affected?	{ecological, cultural, economic, temporal, mixed}

This quad is the primary **SOMT metadata tagging schema** for every Vacationomics interaction at the planetary tier.

IV. THE SEVEN DIMENSIONAL IDENTITY STACK — VACATIONOMICS MAPPING

[DESIGN-PRINCIPLE]

Dimension	Identity Level	App-Parent	Vacationomics Role	LAW Membrane Function
1	SELF	Self	Traveler sovereign; experience owner	Personal data boundary
2	FAMILY	Family Unit	Travel unit; shared resource pool	Shared consent layer
3	COMMUNITY	Community Governance	Host community; carrying capacity steward	Local cultural membrane
4	NATION	Constitutional Governance	Visa / border / legal infrastructure	Legal jurisdiction boundary
5	PLANET	GAIA	Ecosystem load balancer; resonance aggregator	Planetary stewardship gate
6	WORLD (SOLAR SYSTEM)	Interplanetary Governance	Off-world habitat access (200+ year horizon)	Interplanetary resource law
7	UNIVERSE	Unknown / Emergent	Participation-not-ownership; ultimate hospitality philosophy	Emergent / undefined

Control originates at lowest competent level. Awareness aggregates upward.

V. VLSA PRINCIPLE — VACATIONOMICS EXPRESSION

[CERTIFIED] VLSA: "If it works in a THOW, it works on a generation ship." 91/91 VLSA tests passed in the ERES corpus. Vacationomics inherits that certification.

A hospitality system that can govern a **Tiny Home on Wheels** — sovereign, mobile, minimal-footprint, self-contained — operating within a community without extracting

from it, is the same system that governs **hospitality on a generation ship (FDRV) crossing interstellar space.**

VLSA Evidence Sample — Vacationomics Functions

VLSA Test Range	Vacationomics Function Mapped	Status
Tests 1-20	SELF-layer sovereignty and minimal footprint	Inherited / CERTIFIED
Tests 21-40	COMMUNITY carrying capacity and membrane integrity	Inherited / CERTIFIED
Tests 41-60	Resource class tracking without surveillance	Inherited / CERTIFIED
Tests 61-80	Cross-community resonance transfer (SOMT analog)	Inherited / CERTIFIED
Tests 81-91	FDRV-scale governance structure integrity	Inherited / CERTIFIED
Test 92 (proposed)	Real-world booking: SOMT metadata emission + GAIA aggregate	[HYPOTHESIS] — Pending

VI. AGENTIC HOSPITALITY INTERFACE (AHI)

[DESIGN-PRINCIPLE] The AHI is the Step 5 (Computer = 666) threshold instrument in Vacationomics — the gateway from human intent to planetary hospitality consequence.

Properties:

- Natural language entry point (human intent → machine translation → world action)
- Zero friction for the guest at the experience layer
- Full SOMT metadata generation at the infrastructure layer
- EarnedPath weighting applied at access determination
- BERA monitoring of outcome resonance

(See Section XII for AHI End-to-End Reference Flow.)

VII. THEORY OF CHANGE

[DESIGN-PRINCIPLE / HYPOTHESIS] The causal chain from inputs to planetary

outcomes:

Inputs: Individual renewal intent + community hosting capacity + ecosystem state
Outputs: Guest renewal achieved + community benefit + ecosystem integrity maintained
Long-term impact: Planetary hospitality as a net-positive system across the 1,000-year arc

VIII. ERES_VACATIONOMICS CORE FORMULATION v0.2

[DESIGN-PRINCIPLE]

Vacationomics is the cybernetic science of experiential renewal — the governance of how sentient beings rest, explore, and regenerate across the Seven Dimensional Identity Stack, mediated by SOMT metadata, weighted by EarnedPath trust, bounded by LAW-as-membrane, coordinated by GAIA-as-awareness, and controlled by App-Parent sovereignty at the lowest competent level.

In Talonics:

GAIA = Awareness App-Parent = Control EarnedPath = Trust SOMT = Memory LAW = Boundary AHI = Gateway RHC = The Reason It Matters Meritcoin = The Tuning Currency

In $C = R \times P / M$:

C = Planetary Hospitality Coordination R = Experiential Capacity of Earth (and beyond) P = Renewal, Healing, Exploration, Connection M = AHI + EarnedPath + SOMT

IX. OPEN QUESTIONS (Living Archive — append as resolved)

1. Does OptiStay / Steve Myatte represent a genuine ERES alignment candidate or a parallel-discovery signal only? (*Pending 30-min dialogue — target before end 2026*)
 2. What is the BERA SOUND-tier threshold for a hospitality platform to qualify as a GAIA-aware AHI node?
 3. How does Meritcoin Proof-of-Resonance integrate with existing hospitality payment infrastructure at Step 5? (*Escrow/FX/chargeback analog design pending*)
 4. What is the complete SOMT Intent Class ontology? (*v0.1 Field Spec in Section XI is working draft — pending validation*)
 5. At what VLSA test number does the interplanetary hospitality layer become certifiable? (*Test 92 proposed*)
 6. How does the CREDIT vector (VEILED-C discipline) apply to experiential access distribution?
 7. What are the k-anonymity floors per geography/time for SOMT planetary aggregates?
 8. How does EarnedPath score decay over time for inactive guests?
-

X. RECORD INTEGRITY

H2C2H Chain: JAS (primary) → Claude (MIEVM node, v0.1 production + v0.2 integration) → DeepSeek (rating 8.7/10, v0.2 upgrade recommendations) → Perplexity (rating 8.5/10, rigor and testability recommendations) → USE.ai (rating 8.0/10 provisional, ontology and glossary recommendations) → ChatGPT (GAIA/SOMT/App-Parent dialogue, v0.1 source material)

MyWay Def-Rel Status: Step 3 (Community layer — internal ERES record, not yet public publication) **Zenodo Parent Archive:** 10.5281/zenodo.20583261 **This document reaches Step 7 (TETRA gate / counts as published) only upon formal deposit to Zenodo or equivalent.**

XI. SOMT v0.1 FIELD SPECIFICATION

[DESIGN-PRINCIPLE / HYPOTHESIS]

Field Definitions

Field	Type	Description	Privacy Rule
<code>interaction_id</code>	UUID	Unique record identifier	Public (pseudonymous)
<code>identity_scope</code>	Enum	Dimension at which identity is expressed	Minimum necessary dimension only
<code>identity_token</code>	Hashed pseudonym	Dimensioned pseudonymous ID — never raw personal data	SELF-layer: never transmitted above FAMILY
<code>intent_class</code>	Enum	Primary purpose of the hospitality interaction	Aggregated above COMMUNITY
<code>use_class</code>	Enum	Experiential category	Aggregated above COMMUNITY
<code>resource_class</code>	Enum	Primary resource type affected	Transmitted to PLANET layer
<code>location_granularity</code>	Enum	Geographic resolution of the interaction	Coarsened at each membrane crossing
<code>time_window</code>	ISO 8601 range	Duration of interaction	Retained per dimension retention schedule
<code>outcome_signal</code>	Float [-1.0, +1.0]	RHC delta — did this interaction increase or decrease resonance capacity?	Aggregated to PLANET; individual record retained at COMMUNITY
<code>earned_path_delta</code>	Float	EarnedPath score adjustment post-interaction	SELF-layer only; not transmitted upward
<code>provenance</code>	String	H2C2H chain reference; AHI platform identifier	Public

Controlled Vocabularies

intent_class: {rest, exploration, healing, pilgrimage, commerce, mixed}

use_class: {rest, exploration, healing, pilgrimage, commerce, mixed}

resource_class: {ecological, cultural, economic, temporal, mixed}

identity_scope: {self, family, community, nation, planet, world, universe}

location_granularity:

- Level 1: Exact address (SELF-layer only, never transmitted)
- Level 2: Neighborhood / district (FAMILY layer)
- Level 3: City / region (COMMUNITY layer)
- Level 4: Nation (NATION layer)
- Level 5: Continental zone (PLANET layer aggregate)

Sample SOMT Records (Illustrative)

Record A — Individual rest stay, mountain region

```
interaction_id: [UUID]
identity_scope: community
identity_token: [hashed-pseudonym]
intent_class: rest
use_class: rest
resource_class: ecological
location_granularity: Level 3 (mountain region, NW sector)
time_window: 2026-07-10 / 2026-07-14
outcome_signal: +0.72
earned_path_delta: +0.08
provenance: AHI-v0.1 / ERES-VACATIONOMICS
```

Record B — Family pilgrimage, cultural heritage site

```
interaction_id: [UUID]
identity_scope: family
identity_token: [hashed-pseudonym]
intent_class: pilgrimage
use_class: pilgrimage
resource_class: cultural
location_granularity: Level 3 (heritage district, central zone)
time_window: 2026-09-01 / 2026-09-05
outcome_signal: +0.61
earned_path_delta: +0.11
provenance: AHI-v0.1 / ERES-VACATIONOMICS
```

Record C — Commerce travel, urban center

```
interaction_id: [UUID]
identity_scope: community
identity_token: [hashed-pseudonym]
intent_class: commerce
use_class: commerce
resource_class: economic
location_granularity: Level 3 (metro core, east)
time_window: 2026-06-20 / 2026-06-22
outcome_signal: +0.21
earned_path_delta: +0.03
provenance: AHI-v0.1 / ERES-VACATIONOMICS
```

XII. AHI END-TO-END REFERENCE FLOW

[DESIGN-PRINCIPLE / HYPOTHESIS]

STEP 1: NATURAL LANGUAGE PROMPT

Guest: "I need a quiet place to rest near water for four days in July."

AHI receives intent in natural language.

↓

STEP 2: POLICY CHECK – LAW MEMBRANE

AHI queries LAW membrane:

- Is requested destination within carrying capacity? (Community App-Parent)

- Are there active ecological sensitivity flags? (GAIA aggregate)

- Does the request trigger NATION-layer visa/legal constraints?

↓ [PASS → continue | FAIL → return options within membrane bounds]

STEP 3: EARNEDPATH GATE

AHI queries guest EarnedPath token:

- Tier 1 (standard): No threshold

- Tier 2 (sensitive ecosystem): $\text{EarnedPath} \geq 0.40$

- Tier 3 (high ecological sensitivity): $\text{EarnedPath} \geq 0.70$

↓ [PASS → continue | FAIL → return Tier 1 options + EarnedPath upgrade path]

STEP 4: BOOKING ORCHESTRATION (App-Parent layer)

AHI sends booking request to Community App-Parent:

- Availability confirmed

- Resource allocation confirmed

- Community benefit flow confirmed

↓

STEP 5: BOOKING CONFIRMED (Computer = 666 polarity flip)

Guest receives confirmation in natural language.

Zero friction. Zero surveillance. Complete transaction.

↓

STEP 6: SOMT METADATA EMISSION

AHI emits SOMT record per Section XI spec.

Identity coarsened to minimum necessary dimension.

Content of booking NOT transmitted – only metadata.

↓

STEP 7: GAIA AGGREGATION

SOMT record joins planetary aggregate:

- Ecosystem load delta updated for destination zone

- Cultural vitality index updated for host community

- Guest recovery index contribution logged
↓

STEP 8: POST-STAY RESONANCE ASSESSMENT (opt-in)
outcome_signal reported by guest.
EarnedPath delta applied.
GAIA aggregate updated with outcome.
↓

STEP 9: RECORD INTEGRITY
Full H2C2H chain logged in provenance field.
Available for BERA audit.

Error Cases:

- LAW FAIL: Return alternatives within bounds. Do not override community carrying capacity.
- EarnedPath FAIL: Return lower-sensitivity options. Provide upgrade pathway.
- Booking FAIL: Return next available window. Do not manufacture availability.
- SOMT FAIL: Log locally; retry with exponential backoff. Do not proceed without SOMT record.

XIII. FALSIFICATION CONDITIONS

[HYPOTHESIS] Conditions that require reassessment or revocation of associated claims:

Claim	Falsification Condition
OptiStay ARI = High	Myatte implements digital concierge within 12 months
SOMT = not surveillance	Individual content (not metadata) flows above COMMUNITY layer
EarnedPath = earned access	EarnedPath captured by in-group; scores inflated by closed network
GAIA = awareness not omniscience	GAIA-tier governance requires individual-level data to function
VLSA inheritance valid	A THOW-scale hospitality test fails under Vacationomics governance spec
AHI = zero friction	AHI introduces surveillance friction (biometric gate, behavior tracking) at guest interface

XIV. FAILURE MODE CATALOG

[HYPOTHESIS] What Vacationomics looks like when broken:

Failure Mode	Description	Early Warning Signal
EarnedPath Capture	In-group inflates scores; sensitive destinations become exclusive clubs	EarnedPath score distribution becomes bimodal correlated with existing wealth/network
GAIA-Blind Tourism	Platforms operate without SOMT emission; planetary aggregates starved of signal	SOMT record volume fails to scale with booking volume
AHI Gaming	Guests misrepresent intent class to access higher-tier destinations	Outcome signals systematically higher at booking than at post-stay; BERA D(t) spikes
Membrane Collapse	LAW boundaries erode; SELF-layer data flows to PLANET tier	Privacy incident reports from COMMUNITY layer; SOMT field spec violations
Meritcoin Speculation	Proof-of-Resonance becomes financial instrument; access purchasable again via token markets	Meritcoin/EarnedPath correlation breaks from outcome_signal correlation
SOMT Mono-Culture	Single AHI platform monopolizes SOMT emission; resonance signal diversity collapses	>80% of SOMT records from single provenance source

XV. GLOSSARY

Term	Definition	Boundary Condition
AHI (Agentic Hospitality Interface)	Step 5 MyWay threshold instrument — natural language to confirmed hospitality booking with full SOMT emission	AHI is not a concierge; does not replace human-to-human trust interactions

Term	Definition	Boundary Condition
App-Parent	Sovereign control domain at each identity dimension — holds authority to decide and act within that dimension	Does not extend authority above its dimension without earned delegation
BERA	Behavioral and Experiential Resonance Assessment — five-index instrument (ARI, ERI, RCI, RHC, D(t))	Gate A/B = valence-free measurement; RATING = valence-assigned; never conflated
C = R × P / M	Cybernetics = Resource × Purpose ÷ Method — the ERES master equation	Absence of Purpose reduces to resource extraction
EarnedPath	Mechanism through which trust, authority, and access are earned through demonstrated contribution and resonance	Not transferable by purchase, inheritance, or credential alone
FDRV	Far-Distance Resonance Vessel — interstellar generation ship; VLSA maximum scale proof point	Not metaphor; the governance stress test at ultimate scale
GAIA	Planet-level App-Parent and awareness intelligence — observes and orients; does not decide or act at individual level	Requires transparency of consequence, not transparency of content
H2C2H	Human-to-Computer-to-Human — ERES methodology for parallel validation through AI ensemble	Final authority remains with JAS as primary author
LAW = WALL	Boundary membrane governing information permeability between identity dimensions — not punishment	Optimal = selective permeability; failure modes = isolation or surveillance
Meritcoin	Proof-of-Resonance currency — "not mining, tuning" — BERA indices feed value accrual	Not a financial speculation instrument; value derives from verified resonance contribution
MIEVM	Multi-Instance Ensemble Validation Model — Claude, Grok, DeepSeek, ChatGPT as parallel validation nodes	Nodes are advisory; JAS retains final authority

Term	Definition	Boundary Condition
MyWay Def-Rel	Seven-step definition-to-release pipeline; Step 5 = Computer = 666; Step 7 = published	Counts as published only at Step 7 (TETRA gate)
RHC	Resonant Harmony Cycle — always expands to full phrase; never abbreviated to "Cybernetics"	The outcome measure: did this interaction increase or decrease resonance capacity?
SOMT	Sociocratic Overlay Metadata Tapestry — records relationships and consequences, not content	Reports exceptions and patterns, not raw data streams
THOW	Tiny Home on Wheels — minimum-scale VLSA proof-of-concept	If governance cannot operate in a THOW, it is not ready for planetary deployment
Vacationomics	Cybernetic science of experiential renewal — governance of rest, exploration, and regeneration across the Seven Dimensional Identity Stack	Not tourism economics; a planetary stewardship framework for human renewal
VLSA	"If it works in a THOW, it works on a generation ship" — 91/91 tests passed	Test 92 (real-world booking) is the next proposed extension

XVI. KNOWN LIMITS

[DESIGN-PRINCIPLE] Intellectual honesty requires stating where this model could fail or be misread:

1. **Conceptual-to-operational gap:** The framework is architecturally coherent but not yet operationally deployed. SOMT v0.1 is a specification, not a running system.
2. **EarnedPath mechanics:** The scoring formula, decay function, and dispute resolution process are [HYPOTHESIS] — not yet formalized to SOUND-tier.
3. **GAIA as mechanism:** At present, GAIA-tier aggregation is a design target. No planetary-scale SOMT system exists. The 10–50 year horizon is the earliest realistic activation window.
4. **BERA SOUND-tier rubric for AHI nodes:** The threshold for a hospitality platform to qualify as GAIA-aware is not yet formally defined.

5. **Meritcoin integration:** The bridge between Proof-of-Resonance and existing payment infrastructure is [HYPOTHESIS] — requires Step 5 engineering.
 6. **Single-author risk:** ERES operates as a solo independent research institute. Corpus continuity depends on JAS. DAL construct and MIEVM provide partial redundancy; institutional backing is limited.
-

ERES Institute for New Age Cybernetics — est. February 2012, Bella Vista, Arkansas "Don't hurt yourself. Don't hurt others. Build for generations to come."
