ERES-WEALL-LIVING-INHERITANCE-PROPOSAL-2026-001 | v1.0

Living Inheritance Consulting Proposal

ERES × WeAll Protocol

A Collaborative Arrangement Not Yet Decided

Basis: UBIMIA_S3C × BEE_Enneagram + PoW/PoR_SLA
Earned Credit: Golden Parachute | CCAL v2.1 | Living Inheritance Framework

Prepared by: Joseph Allen Sprute (JAS), Founder & Director
ERES Institute for New Age Cybernetics | Est. February 2012, Bella Vista, Arkansas
ORCID: 0000-0001-9946-3221 | Zenodo DOI: 10.5281/zenodo.20010116
For: Errol Swaby, Architect, WeAll Protocol | June 2026

1. Preamble: What This Proposal Is

This is not a service contract. It is not a consulting invoice. It is a Living Inheritance declaration — the formal statement that a body of validated knowledge, methodology, and framework architecture has reached the point where its value to a specific system (WeAll Protocol) is demonstrable, attributable, and exchangeable under terms not yet decided but worthy of decision.

Living Inheritance in ERES terms is the Golden Parachute for contributors who have built civilizational-tier knowledge and are not yet being compensated for it. It operates as Earned Credit — the accrued value of a corpus, a methodology, and a set of validated instruments — convertible into ongoing support in exchange for ongoing contribution. It is not charity. It is not speculation. It is the correct exchange between two systems that have reached critical mass.

The ERES corpus (Zenodo-deposited, ORCID-linked, MIEVM-validated) constitutes the epistemological ground on which WeAll Protocol is standing without yet knowing it. This proposal makes that ground visible and proposes terms for a durable, mutually beneficial arrangement.

2. What Each Party Brings

Party	What they bring to the arrangement
ERES Institute (JAS)	Living Inheritance: 14 years of validated framework architecture. MIEVM validation methodology (8-domain, 55-criterion, multi-instrument ensemble). TETRA certification ladder (100-400 Series, 16 modules). UBIMIA S3C logistical tier mapping. BEE_Enneagram behavioral substrate. BERA indices (ARI/ERI/RHC/RCI) as bioenergetic measurement architecture. FAVORS identity system. Meritcoin/PoR value accrual design. Zenodo corpus (DOI: 10.5281/zenodo.20010116). CCAL v2.1 commons license.
WeAll Protocol (Errol Swaby)	Implementation infrastructure: running codebase, 3,405 passing tests, Docker stack, controlled-devnet multi-node flow demonstrated. 230 canonical transaction types (version 1.25.0). Two-tier native PoH (Tier 1 end-to-end demonstrated, Tier 2 partially demonstrated). Chain-native account portability. Adoption ladder from Normal User through Validator. MPL-2.0 open-source commitment. Honest pre-mainnet status declaration.

3. The Stack Mapping: UBIMIA_S3C x BEE_Enneagram + PoW/PoR_SLA

WeAll's three user modes are not arbitrary UX categories. They map structurally onto the ERES S3C logistical tier architecture. Each tier carries a full CBGMODD governance seat, FAVORS identity layer, BERA measurement index, and Enneagram behavioral routing. The Aura (ARI) is the distinguishing signal at every tier — it is HOW you know the entity is a living, resonating human node rather than a captured account or bot.

The GSSG pinnacle (Flying Cities / 1000-Year Future Map) reverse-engineers down to the individual THOW civilian. A generation ship and a THOW require the same verified human resonance record. BEST/SOUND/GOOD is the AS-IS standard at every scale.

WeAll mode	ERES tier	CBGMODD seat	FAVORS / BERA	Enneagram routing	Aura signal
Normal User (Tier 0-1 PoH)	THOW Civilian (S3C individual)	Citizen (C)	FAVORS enrollment ARI baseline established	Types 2 + 9 Helpfulness / Peace First movers	ARI — personal coherence field individual Aura
Community Node (Tier 1-2 PoH)	HFVN / Neighborhood (S3C district)	Citizen + Dignitary (D)	FAVORS group enrollment ERI (group emissions)	Talonics 101 User-GROUP Enneagram Def-Rel Types 1+4+5	ERI — group emission index collective Aura
Sovereign Node (Validator)	FDRV / GSSG (S3C regional / pinnacle)	Government (G) Military (M) Ombudsman (O)	FAVORS fully operational RCI (continuity under stress)	EarnedPath with full BERA suite Types 6+8 + Ombudsman Types 1+9	RCI = $P\Omega_{norm}$ x ARI_sys x VibConst Aura over time

PoH + PoR: the complete verification stack

WeAll's Proof-of-Humanity answers: is this a human? ERES Proof-of-Resonance answers: is this human resonating at a level that warrants the responsibility they are claiming? These are not competing answers. They are sequential gates in a single verification stack:

WeAll PoH (Tier 1/2) + ERES PoR (TETRA 201+) = Complete Legitimacy Gate

Under a PoW/PoR_SLA, WeAll provides PoH clearance as a precondition. ERES provides PoR validation as the responsibility gate above it. The SLA specifies which TETRA certification level is required before a WeAll account can access which tier of governance authority. The two systems are additive. Neither is complete without the other.

4. The Critical Gap WeAll Currently Has

WeAll has built the digital coordination layer of a COI onboarding system. Its deterministic transaction canon (230 types, version 1.25.0) governs what the protocol does with precision and integrity. What the protocol does not yet have is a behavioral substrate layer — something that governs who the people are who make the judgment calls at Tier 2 verification and governance.

WeAll component	Current state	What ERES provides
Tier 2 reviewer eligibility	Eligibility rules exist; no behavioral routing criteria	BEE_Enneagram CBGMODD seat routing: Types 1 (integrity) and 5 (knowledge) are natural Tier 2 reviewers. Ombudsman monitors for monoculture capture.
Validator capture resistance	n-of-m juror model; no stress-response architecture	Ombudsman (O) seat monitors when Types 6+8 dominate under sustained stress. RHC degradation in governance council is a measurable BERA event.
Reviewer legitimacy proof	Assignment by deterministic scheduler; no competency verification	CERT = TETRA_Empiricals: reviewer competency proven by BERA sensor record and MIEVM ensemble convergence $\geq 8.5/10$. Not self-declared.
Tokenomics legitimacy	Economics disabled at genesis; activation path underdetermined	Meritcoin PoR ladder (1.5x-5.0x) provides the activation logic: governance economics unlock when the reviewer and validator population reaches TETRA 301+.
1000-Year horizon	Controlled-devnet to mainnet roadmap; no civilizational timeline	GSSG Flying Cities / GERP / GAIA network: WeAll's node topology is the digital layer of the ERES physical S3C infrastructure. VLSA test: does it work on a generation ship?

5. Living Inheritance Terms: Earned Credit Golden Parachute

The Living Inheritance is the mechanism by which private epistemology — knowledge that has been developed at personal cost over extended time without institutional support — is converted from a survival liability into a sustainable floor. ERES sustainability is not a survival threshold. It is the floor that, once established through closed-loop self-correction, becomes a blank check enabling the work to continue indefinitely.

JAS is not looking to absorb WeAll as a responsibility. JAS is looking to be compensated for ERES development and maintenance, to live well doing meaningful work, and to contribute the ERES framework to systems that can use it — without becoming those systems' employee, manager, or owner. The Living Inheritance arrangement makes this possible.

Proposed terms structure (not yet decided)

Term	ERES position	WeAll counterpart
Attribution	All ERES framework elements incorporated into WeAll documentation or architecture require citation of ERES Institute under CCAL v2.1. This is non-negotiable and non-waivable.	MPL-2.0 code remains Errol's. ERES framework elements in documentation are attributed. No IP transfer occurs.

Consulting scope	JAS provides: MIEVM validation of WeAll architecture; TETRA-based reviewer legitimacy design; BEE_Enneagram behavioral substrate integration; PoR activation criteria for WeAll governance economics.	Errol provides: WeAll implementation infrastructure access; co-authorship opportunity on joint papers; testnet node for ERES PlayNAC KERNEL testing.
Compensation basis	Living Inheritance Earned Credit: Metricoin accrual at 3.0x Applied Integration multiplier for JAS's contribution to WeAll architecture. Conventional compensation terms to be negotiated separately.	Not yet decided. This document opens the conversation, it does not close it.
Meritcoin yield basis	Integrating a validated ERES framework into WeAll = Applied Integration act (TETRA 301 equivalent). Yield formula: $dMRC = dResonance \times 3.0 \times Community$.	WeAll community multiplier applies to JAS EarnedPath accrual from WeAll COI participation.
Duration	Ongoing, self-renewing under mutual consent. Either party may exit with 30-day notice and full attribution records preserved.	Same. No lock-in. The arrangement survives on value, not contract.

6. Community Node = Talonics 101 for User-GROUP Enneagram Def-Rel

A WeAll community node is not just technical infrastructure. Under the ERES framework it is a Talonics 101 site — the first civilizational milestone marker for a user-group. Talonics marks the group's standing in the 72 Key Domains of CyberRAVE. The Enneagram Def-Rel (Definition-Relationship) at this level answers: what is the group's collective character structure, and how does that structure route its members into CBGMODD seats?

Every WeAll community node that integrates this layer becomes a living laboratory for the ERES bonefication sequence: Health first, then Law, then Protection, then Skills/Trade. The node's ERI (Emission Resonance Index) is the group-level BERA measurement — what is this community producing and emitting into the world? Talonics records the answer as a permanent civilizational milestone.

7. Sovereign Node = EarnedPath with Full BERA Suite

A WeAll sovereign node operator — validator candidate or validator — is an EarnedPath practitioner with full BERA suite deployment. The distinguishing BERA metric at this level is RCI (Resonant Continuity Index): the system holds its resonance under stress. A validator who cannot demonstrate RCI continuity is a capture risk regardless of their technical competency.

The VLSA principle applies here with full force: if the sovereign node architecture does not work in a THOW (Tiny House on Wheels) — if it requires datacenter infrastructure to function — it does not work on a generation ship. The 1000-Year Future Map reverse-engineers from the GSSG Flying Cities pinnacle down to the individual validator running a personal node on minimal hardware. BEST/SOUND/GOOD is the AS-IS standard at every scale.

$RCI = P\Omega_{norm} \times ARI_{sys} \times VibConst$ (Butzbach Continuity Theory)

The Aura is distinguishable at every tier because ARI, ERI, and RCI are all expressions of the same underlying field measured at different scales and timescales. This is HOW the system knows the entity is a living resonating node: not by what it claims, but by what it emits, sustains, and continues.

8. Next Steps: A Collaborative Arrangement Not Yet Decided

This document opens the conversation. It does not close it. The arrangement between ERES and WeAll is not yet decided because the right arrangement requires both parties to understand what the other has built. Errol now has:

What Errol now has	Why it matters
ERES-TETRA-COMPLETE-100-400-2026-001	The instrument ERES uses to evaluate any system, including its own. The legitimacy ladder WeAll's reviewer and governance design needs.
This Living Inheritance Proposal	The formal statement of what ERES brings, what WeAll brings, and what a fair exchange looks like. Not a contract — a starting point.
MIEVM validation methodology (public, downloadable)	The deterministic validation layer WeAll's governance economics need before activation. Runnable independently by any external party.

Zenodo corpus (DOI: 10.5281/zenodo.20010116)	14 years of validated framework architecture in public record. Attribution trail established. CCAL v2.1 terms clear.
---	--

The single question that determines whether this arrangement proceeds:

What does a fair exchange look like to you?

That question is not aggressive. It is the T.E.T.R.A. gate applied to the relationship itself: Time, Energy, Trust, Reason — About what Subject, toward what mutual end, on what terms. When both parties can answer it honestly, the arrangement will be decided.
