

CARE Commons Attribution License v2.1 (CCAL)

ERES Institute for New Age Cybernetics

Bella Vista, Arkansas • est. February 2012

License Steward: Joseph Allen Sprute (ORCID: 0000-0001-9946-3221)

PREAMBLE

The CARE Commons Attribution License v2.1 (CCAL) is the governing open-licensing instrument for all outputs of the ERES Institute for New Age Cybernetics. ERES Institute is not constituted as a business. It is a lived constitutional act — a solo-orbit independent research body operating under the Three Governing Principles:

┆ *Don't hurt yourself. Don't hurt others. Build for generations to come.*

CCAL encodes those principles into the terms under which ERES knowledge is shared. It is designed to maximize open access, protect attribution integrity across long-horizon instruments, and prevent exploitative extraction of knowledge produced without institutional resources.

CCAL is **functionally compatible** with Creative Commons Attribution 4.0 International (CC-BY-4.0) in its attribution requirements, and extends CC-BY-4.0 with provisions specific to the ERES corpus. The relationship between CCAL v2.1 and CC-BY-4.0 is explained in full at the end of this document.

SECTION 1 — DEFINITIONS

"**Work**" means any document, instrument, codebase, dataset, white paper, preprint, ontology, protocol, or derivative thereof produced by or under the direction of the ERES Institute for New Age Cybernetics and released under this license.

"**ERES Corpus**" means the complete interwoven body of Works, including VERTECA, CyberRAVE, and RT_Media outputs, confirmed as corpus derivatives under CCAL v2.1.

"**Licensors**" means Joseph Allen Sprute and the ERES Institute for New Age Cybernetics.

"Licensee" means any person or entity exercising rights under this license.

"Derivative Work" means any work that incorporates, adapts, translates, or builds upon the Work in any form.

"MIEVM Output" means any instrument produced through the Multi-Instrument Ensemble Validation Method operative in the ERES corpus — including ensemble-validated ratings, convergent composites, and co-produced instruments — which remains a corpus derivative regardless of which AI instruments participated in its production.

"Commercial Use" means use primarily intended for or directed toward commercial advantage or monetary compensation.

SECTION 2 — GRANT OF RIGHTS

Subject to the terms of this license, the Licensor grants the Licensee a worldwide, royalty-free, non-exclusive, perpetual license to:

2.1 Reproduce and distribute the Work in any medium or format.

2.2 Adapt, remix, transform, and build upon the Work.

2.3 Use the Work for academic citation, research, educational purposes, and open-source software implementation.

2.4 Charge for services, implementation, or support built around the Work — but not for the knowledge itself in isolation.

2.5 Create proprietary tools that interface with CCAL-licensed systems (APIs, plugins, wrappers), provided the CCAL-licensed components remain openly licensed.

SECTION 3 — ATTRIBUTION (REQUIRED)

3.1 Required Attribution Format

All use, reproduction, adaptation, or citation of any Work must include the following attribution in a form reasonably prominent given the medium:

Original Framework: Joseph Allen Sprute
ERES Institute for New Age Cybernetics (est. February 2012)
ORCID: 0000-0001-9946-3221
License: CARE Commons Attribution License v2.1 (CCAL)
Source: github.com/ERES-Institute-for-New-Age-Cybernetics
DOI: 10.5281/zenodo.20010116

3.2 MIEVM Output Attribution

For any Work produced through MIEVM ensemble validation, attribution must identify Joseph Allen Sprute as Framework Originator and may identify AI instruments as synthesis contributors under their respective organizational affiliations. AI instruments are not authors in the legal sense; they are synthesis instruments within the H2C2H methodology.

3.3 Continuity of Attribution

Attribution must be preserved intact across all derivative works, including translations, adaptations, and downstream composite instruments. Removal or obscuring of attribution triggers automatic license termination under Section 7.

SECTION 4 — TRANSPARENCY

4.1 Derivative Works must be released as open-source under terms no more restrictive than CCAL v2.1 or a compatible license (see Section 9 — Compatibility).

4.2 Modifications must be clearly marked and documented. Changed material must be identified as distinct from the original Work.

4.3 Source materials underlying any Derivative Work must be made publicly available.

SECTION 5 — SHARE-ALIKE

5.1 If you remix, transform, or build upon the Work, you must distribute your contributions under CCAL v2.1 or a compatible license.

5.2 You may not apply legal terms or technological measures (including DRM) that restrict others from exercising the rights granted under this license.

SECTION 6 — PATENT NON-ASSERTION

6.1 Patent Peace

By using this Work, you agree not to assert patent claims against any party using this Work as licensed, and to grant royalty-free patent licenses for implementations of the frameworks herein.

6.2 Patent-Pending Components

The following components are subject to intellectual property protection and require direct licensing consultation with the ERES Institute: DTBL, IDIPITIS four-layer architecture, Talonics RAW System, GSSG material specifications, and SCC hardware protocol.

Contact: eresmaestro@gmail.com

6.3 Defensive Termination

If you initiate patent litigation against any party alleging infringement through use of this Work, your license terminates automatically and immediately.

SECTION 7 — PROHIBITED USES

The following uses are prohibited under CCAL v2.1:

7.1 Closed-source commercial products incorporating the Work without a separate partnership agreement with the ERES Institute.

7.2 Rent-seeking behavior — value extraction from the Work without proportional contribution back to the commons.

7.3 Any use that violates the Three Governing Principles: causing harm to self, others, or future generations.

7.4 Unauthorized use of the ERES Institute name, Joseph Allen Sprute's name, or ERES corpus instrument identifiers in a manner that implies endorsement without consent.

SECTION 8 — NO WARRANTY

This Work is provided "AS IS" without warranty of any kind, express or implied, including but not limited to fitness for a particular purpose. The Licensor assumes no liability for damages arising from use or misuse. Errors and omissions are corrected when identified via GitHub version control.

SECTION 9 — TERMINATION

9.1 Your rights under this license terminate automatically upon: failure to comply with attribution requirements; use for prohibited purposes; assertion of patent claims against licensees; or sublicensing in violation of these terms.

9.2 Reinstatement: Automatic reinstatement occurs 30 days after the violation ceases. Permanent termination applies after a second violation. No reinstatement for intentional or malicious violations.

SECTION 10 — GOVERNANCE OF THIS LICENSE

License Steward: ERES Institute for New Age Cybernetics

Version Updates: Community proposals welcomed. Changes require supermajority consensus (67%). Backward compatibility maintained where possible. Prior versions remain valid for existing implementations.

Dispute Resolution:

1. Good-faith dialogue (30 days)
 2. Community mediation (60 days)
 3. Arbitration by mutually agreed expert panel
-

SECTION 11 — LAYERED COMPONENT STRUCTURE

CCAL v2.1 governs the corpus as a whole. Component-level licenses apply within that governing frame as follows:

Component Type	Component License	Governing Frame
Codebase (PlayNAC KERNEL, Talonics SDK)	MIT License	CCAL v2.1
Documentation and white papers	CC BY-SA 4.0	CCAL v2.1
Datasets and ontologies	ODC-BY	CCAL v2.1
Hardware schematics	CERN-OHL-S v2	CCAL v2.1
MIEVM ensemble outputs	CCAL v2.1 direct	CCAL v2.1

In any conflict between a component-level license and CCAL v2.1, CCAL v2.1 governs.

SECTION 12 — LICENSE COMPATIBILITY

Compatible licenses (can combine or remix with CCAL):

- Creative Commons BY-SA 4.0
- GNU Free Documentation License
- Open Publication License
- Academic Free License

Incompatible licenses:

- Proprietary or closed-source licenses
 - Licenses permitting DRM or technical restrictions
 - Licenses allowing sub-licensing or exclusive rights
 - Non-commercial-only licenses (CCAL permits commercial use if non-exploitative, per Section 2.4)
-
-

EXPLANATORY NOTE: CCAL v2.1 AND CC-BY-4.0

How They Work Together

This note explains the relationship between CCAL v2.1 and Creative

Commons Attribution 4.0 International (CC-BY-4.0) for the benefit of archives, repositories, institutions, and reuse tooling that require a recognized SPDX license identifier.

Why Two Licenses?

CC-BY-4.0 is a globally recognized, legally robust open license maintained by Creative Commons. It is supported natively by Zenodo, ResearchGate, ORCID, and virtually all academic repositories. It requires attribution and permits broad reuse including commercial use. It does not include share-alike, patent non-assertion, or corpus-specific provisions.

CCAL v2.1 is the operative governing license for the ERES corpus. It extends CC-BY-4.0 with provisions that CC-BY-4.0 alone does not provide: share-alike requirements for derivative works, patent non-assertion, explicit prohibition of rent-seeking extraction, Three Governing Principles alignment, continuity of attribution across MIEVM ensemble outputs, and the layered component structure that governs codebase, documentation, and hardware schematics differently within one unified frame.

How They Interact

For this Zenodo deposit and all ERES corpus instruments:

CC-BY-4.0 is the standardized SPDX proxy. It is listed in the Zenodo license dropdown to satisfy repository metadata requirements. It accurately represents the minimum reuse floor: attribution required, broad reuse permitted.

CCAL v2.1 is the operative license. It governs all actual reuse, adaptation, and distribution. CCAL v2.1 is more protective than CC-BY-4.0 in the directions listed above. Where CC-BY-4.0 and CCAL v2.1 overlap, the terms are equivalent. Where CCAL v2.1 adds requirements CC-BY-4.0 does not contain, those additional requirements apply.

In plain terms: CC-BY-4.0 tells a repository what kind of license this is. CCAL v2.1 tells a human reuser what the actual terms are. Any party relying only on CC-BY-4.0 for reuse authorization without reading CCAL v2.1 is relying on an incomplete picture of their obligations.

What This Means for Reusers

Scenario	CC-BY-4.0 alone sufficient?	CCAL v2.1 adds...
Cite the work in a paper	Yes	Nothing additional
Reproduce a passage with attribution	Yes	Nothing additional
Adapt and redistribute openly	Partially	Share-alike requirement
Create a commercial product	Partially	Non-exploitation clause
Implement in software	Partially	Patent non-assertion
Build MIEVM-validated derivative	No	Attribution continuity rules
Use ERES Institute name	No	Consent required

Recommended Citation of License

License: CARE Commons Attribution License v2.1 (CCAL)
Compatible with: Creative Commons Attribution 4.0 International (CC-BY-4.0)

DOI: 10.5281/zenodo.20010116

For Zenodo Custom License Field

When submitting ERES corpus instruments to Zenodo, use:

License dropdown: CC-BY-4.0 (standardized SPDX proxy)

Custom License — Title:

CARE Commons Attribution License v2.1 (CCAL)

Custom License — Description:

The CARE Commons Attribution License v2.1 (CCAL) is the operative governing license for the ERES Institute corpus. It is functionally compatible with CC-BY-4.0 in attribution requirements and adds share-alike, patent non-assertion, Three Governing Principles alignment, and continuity of attribution across ensemble-validated outputs.
