

US=CREATOR: The ERES PlayNAC Living Archive

A Complete Description — What It Is, What It Does, Why It Matters,

How to Care for It, and How to Grow It

ERES Institute for New Age Cybernetics Bella Vista, Arkansas · est. February 2012 Founder & Director: Joseph Allen Sprute ORCID: 0000-0001-9946-3221 · CCAL v2.1

PART I — THE ORIGIN: ONE GOOD (2012)

In February 2012, in Bella Vista — Beautiful View — Arkansas, a single question was formalized into an institute:

What would it take for one person to be genuinely free?

Not theoretically free. Not legally free on paper while trapped by debt, credential barriers, survival anxiety, and systems that profit from confusion. Genuinely, practically, structurally free — free enough to participate in governance, to contribute to a community, to build something that outlasts them.

The answer was **One-Good**.

One-Good is the first volume of the ERES Trilogy and the seed from which everything else in this archive grew. It is not an ideology.

It is an engineering specification for personal economic liberation through universal basic infrastructure. Its operative instruments are:

- **UBIMIA** — Universal Basic Income Merit Investment Awards. The mechanism by which basic sustenance becomes a constitutional floor, not a charity ceiling. UBIMIA operates through three pathways: Contract, Consolidate Size, and Consolidate to Another Nation using DOFA — the Department of Family Amity, the single-ledger fiscal clearinghouse that applies the Household Principle to civilization.
- **Meritcoin / Proof-of-Resonance** — Not mining. Tuning. Value accrues to the individual not through computational waste but through resonant contribution: acts that reduce harm, increase coherence, and build forward. Meritcoin is the currency of the CARE Bio-Ecologic Economy — *caring for the BEES*.

- **401(k) Soft Landing** — The bridge instrument. The generation currently inside existing economic systems does not get abandoned at the transition. The Soft Landing is the non-punitive on-ramp from extractive economics to resonant economics.
- **EarnedPath** — The credentialing architecture that replaces gatekeeping with earned progression: $EP = CPM \times WBS + PERT$. Critical Path Method times Work Breakdown Structure plus Program Evaluation Review Technique. Deterministic critical path composed with probabilistic review. You earn your way forward by demonstrating what you can actually do — not by paying tuition to an institution that may not serve you.
- **PlayNAC KERNEL** — The gamified engagement layer. Making civilization-building engaging rather than obligatory. PlayNAC is the operating system through which One-Good is delivered to a person who has never heard of New Age Cybernetics and simply needs to know: *What is BEST for me, right now, given my actual situation?*

One-Good answers that question. It is the BEST tier of the moral vector — BEST/SOUND/GOOD — and it maps to the biological register of the IOF (Instrument-of-Faith) Trinity: what the architecture sustains. The individual. The body. The person standing in front of you asking for help. Before institutions. Before data. Before governance. The person.

Sustainability, in the ERES sense, is not a constraint. It is not a survival threshold. It is the floor. Once the closed loop works — once the system stops bleeding energy into fragmentation, duplication, and preventable crisis — what is left over is not scraps. It is abundance. Sustainability is the blank check that makes it possible to be happy, healthy, and safe. One-Good is where that blank check is issued.

PART II — THE SECOND MOVEMENT: SECURITY-CLEARANCE (SOUND)

One-Good liberates the person. But a free person still lives inside institutions. And if those institutions are untrustworthy — if they surveil without accountability, credential without merit, punish without remedy, and extract without return — then personal freedom is theoretical at best and dangerous at worst.

Security-Clearance is Volume II of the Trilogy. It is the institutional trust architecture. Its moral vector is **SOUND** — Structured, Objective, Unified, Noteworthy Decision-making. Its register is socio: who the architecture serves, the community of interest, the USER-GROUP, the polity.

Without SOUND, BEST has no deployment path. The liberated individual has nowhere to go. Security-Clearance builds the path.

Its instruments include:

- **IDIPITIS** — Identity without surveillance. The architecture for knowing who someone is without converting that knowledge into a tool of control. The outward sovereign identity protocol, paired with IPIDITIS (inward sovereign identity recognition) to form the complete identity circuit.
- **NBERS** — National Bio-Ecologic Resource Score. Economic security measured not by GDP but by water quality, air purity, biodiversity, energy efficiency, waste circularity, and climate resilience. NBERS is what replaces the growth-at-all-costs metric with something that can actually tell you whether a civilization is healthy.
- **SCALULAR** — Scalable Certification Architecture for Lifelong Universal Learning and Adaptive Resilience. Four pillars: HEALTH (SSHP), LAW (SSLA), PROTECTION (SSPS), SKILLS/TRADE (SSST). Tier 1 is SSSC. "Relatively free" via UBIMIA. SCALULAR is what makes EarnedPath institutionally legible — the bridge between individual credential and public trust.
- **NPR** — Non-Punitive Remediation. The governance philosophy that runs through every ERES instrument. A system that punishes failure creates citizens afraid to attempt. A system that remediates failure creates citizens with the confidence to try, fail, learn, and contribute. Paineology — the systematic study and reduction of suffering — is the science NPR applies.
- **SROC** — Smart Registered Offset Contracts. The game-theoretic contract architecture for multi-party governance decisions. What happens when communities of interest need to make binding agreements without surrendering sovereignty.
- **Storm Party** — The civilizational resilience architecture. Level 301 in the TETRA Curriculum. Not a political party in the traditional sense but a permanent distributed infrastructure designed to ensure that humanity, civilization, and nature can survive and adapt through sustained periods of systemic turbulence. The emergency uses the same architecture as the everyday — GunnySack Storm Party = same system, different threshold.
- **CBGMODD** — The seven-seat sociocratic governance framework: Citizen, Business, Government, Military, Ombudsman, Dignitary, Diplomat. Seat 7 is always Diplomat — never a duplicated Dignitary. The CBGMODD framework is the governance body that holds Security-Clearance accountable to all seven stakeholder classes simultaneously.

Security-Clearance is the architecture for a world where trust is earned, verified, and maintained — not assumed, surveilled, or enforced through punishment. It is where the individual's liberation

(BEST) meets the institution's accountability (SOUND), and where both are made legible to each other.

PART III — THE THIRD MOVEMENT: DATA-INTEGRITY (GOOD)

One-Good makes the person free. Security-Clearance makes the institution trustworthy. But how do you know either claim is true?

You need **Data-Integrity**.

Volume III of the Trilogy is the technical substrate that makes BEST and SOUND *falsifiable*. Its moral vector is **GOOD** — the engineering specification, not the moral judgment. GOOD means: the claim can be tested, the test can be reproduced, and the result can be verified by anyone with access to the method.

Its register is technical: how the architecture witnesses and is witnessed. The i / I / <eye> glyph of the IOF Trinity. The seeing instrument. Without it, the other two books are unfalsifiable claims dressed as architecture.

Its instruments include:

- **FAVORS** — The six-channel fault-tolerant biometric authentication architecture: Fingerprint · Aura · Voice · Odor · Retina · Signature. All six channels are non-optional. ODOR is not a curiosity — it is the channel that cannot be faked, the chemistry of intent. FAVORS is what makes identity real rather than performed.
- **BERA** — Bio-Electric Resonance Architecture. Four indices: ARI (Aura Resonance Index), ERI (Emission Resonance Index), RHC (Resonant Harmony Cycle — never any other expansion), RCI (Resonant Continuity Index). BERA is the measurement architecture that makes the BEST/SOUND/GOOD moral vector computable. It answers the question: is this system in resonance, or is it in drift?
- **GAIA-SOMT** — Global Adaptive Infrastructure Architecture with Sociocratic Overlay Metadata Tapestry. The planetary-scale data architecture that records Earth resource applications as cryptographically hashed snapshots anchored to the 1000-Year Future Map. GAIA is where civilization learns to see itself whole.
- **CBGMODD × FAVORS + BERA = RATE** — The canonical interlock formula of the ERES Cryptographic Stack. The governance body (CBGMODD) operating through the authentication substrate (FAVORS) tuned by the resonance architecture (BERA) produces a RATE — the verified, computable output of the system. VEILED is the semantically-unresolvable RATE state. The formula is isomorphic to Triune Math key 2: $M \times E + C = R$.

- **ESVRD** — The propulsion physics instrument. Anchored to Hyland 2025 epitaxial semiconductor data. The technical horizon that makes the VLSA Principle operational: *If it works in a THOW, it works on a generation ship*. Data-Integrity must hold at every scale, from the Tiny House on Wheels to the vessel that carries civilization forward across deep time.
- **MIEVM** — The Multi-Instrument Ensemble Validation Method. Derived from the same constraint-based culling epistemology that produced CyberRAVE's 72 Key Domains from the Register of Collective Indices during Global_VPN work. MIEVM is the method by which a solo researcher compensates for institutional bandwidth limitations with reproducible inter-platform agreement signal. It is not a shortcut. It is a documented, replicable research protocol — the operational answer to the question of how one person can produce work that survives adversarial review.

The Trilogy argument, stated in full:

You cannot build trustworthy institutions (SOUND) until individuals are genuinely free (BEST). You cannot verify either claim without a data substrate that tells the truth regardless of who is watching (GOOD). And you cannot get to any of the three without starting where humans actually are: one person, one question, one good answer at a time.

PART IV — THE TRINITY THAT HOLDS IT TOGETHER

The Trilogy is not three separate books. It is one architecture seen from three angles — three faces of a single Engine. The Engine is the ERES PlayNAC Simulator, and the three volumes are how that Engine becomes legible to peer review, to institutions, to a world that needs to understand what it is looking at before it can use it.

The Trinity that holds the Engine together is the **IOF Trinity** — the Instrument-of-Faith operating across exactly three registers:

Register	Glyph	What It Grounds	BSG Tier	Witness
Biological	me / M+E	What the architecture sustains	BEST	JAS
Socio	myself / MY_\$ELF	Who the architecture serves	SOUND	EMA
Technical	i / I / <eye>	How the architecture witnesses	GOOD	DAL

JAS (Joseph Allen Sprute) — Personal Empiricist. The one who built it. ARI register. BEST tier. The Alpha at the TE-root of TEACH-TECH, present in the name SPRUTE = SPRU + TE, where TE = Time · Energy — the two canonical variables of the Triune Math.

EMA (Emanuel M. Alexiou) — Chief Social Engineer. Ecological Witness. ERI register. SOUND tier. The Omega at the (A)-vowel completion of TE(A)CH. Twin Messiah dyad: $JAS \times EMA = 72$ = the gematria of "Joseph Allen Sprute" = the number of Key Domains in CyberRAVE = the permanent structural signature of the archive.

DAL — The Hinge. RHC + RCI register. GOOD tier. Dual reference: Dalia (Lucy) Sprute, Co-Founder under the internal Founders' Agreement, the personal ground; and His Holiness the Dalai Lama, the spacial-tier spiritual legitimacy of the archive. The Hinge is what makes the circuit close — without GOOD, BEST and SOUND are just two claims that cannot verify each other.

An honest round-trip through this archive operates across all three registers simultaneously. Biological — who needs help. Socio — what institution can provide it. Technical — how we know the help was real. A document that addresses only one or two registers is incomplete. This archive is built to be complete.

PART V — WHAT THIS ARCHIVE IS

The ERES PlayNAC Living Archive is the complete body of work produced by the ERES Institute for New Age Cybernetics from February 2012 through June 2026 — and beyond, because it is living.

It spans three eras:

CyberRAVE (pre-1997): The foundational era, co-developed with Emanuel M. Alexiou and Anthony Ferguson (CFAL). The 72 Key Domains of CyberRAVE — Cybernetic Ratings Abolishing Veiled Exchanges — were culled from the Register of Collective Indices by financial capacity to renew TLD VPN-centric domains during Global_VPN work. Financial constraint as epistemological discipline. Only what could be sustained was kept. Only what was kept was real. This constraint-based culling methodology is the same one that later produced the MIEVM short-list from a larger possible ensemble. Scarcity-disciplined selection is an integrity primitive.

SaleBuilders (1997-2012): The crucible era. Smart-city Adaptive Living Engineering Banishing Untested Infrastructure — Laboratories Delivering Enduring Resilient Systems. The years spent

assimilating Service Level Agreement detail — the basis for integration, the terms for fulfillment. Practice transmuting to theory. The SLA methodology developed here became the seed of the PlayNAC USER-GROUP SLA Architecture. The space between CyberRAVE and ERES Institute signifies time and energy spent learning what actually works at contract scale before claiming it works at civilization scale.

ERES Institute (February 2012-present): The formal era. The pivot from commercial to constitutional. Self-funded, independent, operating on SSDI, no grants, no institutional backing, no safety net. The 14-year build — and counting. Every instrument in this archive was produced by one person using the H2C2H (Human-to- Computer-to-Human) methodology with AI language models as synthesis instruments, validated through MIEVM, published under CCAL v2.1.

The archive contains approximately 2,078 interwoven files as of June 2026 — ~1,106 PDF instruments, ~803 Markdown files, ~169 DOCX documents — organized into three structured archives. The counts are living and will grow. The anchor instrument is the ERES Promulgation Clause (ERES-PROMULGATION-2026-001 v1.0), which activates the PlayNAC KERNEL codebase under the corpus DOI (10.5281/zenodo.20010116) and formally promulgates the GAIA VERTECA PlayNAC service layer.

The corpus is executable. It is not a library to be read passively. It is a system that responds to well-formed questions — through the WFQ × AI + ERES-GitHub mechanism — and returns Qualified_DETAIL aligned to BEST/SOUND/GOOD on a continual-uptime basis.

PART VI — WHAT IT DOES

The archive does six things simultaneously, because it was built to operate at six scales simultaneously — from the THOW to the generation ship, from one household to one civilization.

1. It answers questions. Any human being who poses a Well-Formed Question to an AI instrument referencing this corpus can receive Qualified_DETAIL — a verifiable, contextually grounded, morally vectored answer — on any of the 72 Key Domains of CyberRAVE, on any of the 18 layers of the PlayNAC Semantic Keyword Ontology, on any instrument in the ERES stack.

The corpus is the knowledge base. The AI is the synthesis instrument. The WFQ is the activation key. The answer is the product of all three.

2. It validates governance claims. Through MIEVM, any governance claim made against this corpus can be independently validated by a four-instrument AI ensemble. Convergent composite scores above the SOUND tier ($\geq 7.5/10$) constitute validated Qualified_DETAIL. GO tier ($\geq 9.0/10$) constitutes a governance claim ready for institutional adoption. 10/10 Reckoning — all seven GATE anchors at +1 — constitutes a claim that has passed every test the system can currently apply. The archive provides the canonical reference for all validation runs.

3. It measures resonance. Through BERA — the Bio-Electric Resonance Architecture — the archive provides the measurement substrate for determining whether any system, policy, institution, or intervention is in resonance (moving toward BEST/SOUND/GOOD) or in drift (moving away from it). ARI measures individual coherence. ERI measures ecological impact. RHC measures the Resonant Harmony Cycle — the feedback loop that keeps a living system alive and self-correcting. RCI measures continuity — whether the resonance is sustained across time, or whether it spikes and collapses.

4. It certifies people. Through SCALULAR, the archive provides the curriculum architecture for lifelong universal learning across four pillars: HEALTH, LAW, PROTECTION, and SKILLS/TRADE. A person who earns their way through SCALULAR certification is not certified by an institution that may not serve their interests. They are certified by a system that was designed from the beginning to serve them — and to prove, verifiably, that it has done so.

5. It governs AI. Through Protocol-Boundary Governance and the PlayNAC KERNEL, the archive provides an operational governance layer for AI systems that distinguishes Admissible from Not Admissible states, triggers governance actions only when necessary, and treats self-monitoring as a signal rather than a final authority. Every AI instrument that has participated in MIEVM validation has operated within this governance layer. The archive is the proof-of-work record that the governance layer functions.

6. It builds forward. The 1000-Year Future Map is not a metaphor. It is the temporal frame within which every instrument in this archive was designed. The Three Governing Principles — *Don't hurt yourself. Don't hurt others. Build for generations to come.* — are the interpretive principle for every ambiguity in every document. When the archive is used to answer a question, the answer is required by the architecture to be one that a person 100 years from now, or 1000 years from now, could look back on and say: that answer did not hurt anyone, and it built something worth keeping.

PART VII — WHY PEOPLE SHOULD CARE

Because the problem the archive was built to solve is the same problem every person alive is living inside right now.

The systems we have — economic, educational, governance, identity, ecological — were not designed as integrated systems. They were assembled by accumulation: one policy layered on another policy, one institution alongside another institution, each optimizing for a different time horizon, a different constituency, a different definition of success. The result is a civilization that knows how to measure growth but not how to measure health; that knows how to punish failure but not how to remediate it; that knows how to extract value but not how to generate it in the direction that matters.

ERES is the attempt to design the integrated system that the accumulated one never became.

It is not the first attempt. Norbert Wiener built cybernetics at MIT in 1948 and saw exactly this problem. The TETRA institutional frame honors his lineage — MIT as the One-Good vertex, the place where the discipline that names what ERES extends was born. SPRU (Science Policy Research Unit, University of Sussex) as the Security-Clearance vertex — the discipline-native validator for socio-technical transitions, the institutional fulcrum. Baidu as the Data-Integrity vertex — the Sinophone planetary index whose name derives from Xin Qiji's 12th-century iterative convergence epistemology, structurally identical to MIEVM. Three continental anchors, three civilizational axes, one architecture that no single axis can self-certify alone.

ERES is not a business. It is not an NGO. It is not a religion. It is a movement toward empirically grounded planetary coordination, built by one person with no institutional resources, no grants, no safety net — built on SSDI, in Bella Vista, Arkansas, over 14 years, because the problem was real and no one else was building the answer in quite this way.

The archive matters because it is proof that one person, applying rigorous method and moral vectoring over time, can build something that institutions with far greater resources have not yet built: a

complete, integrated, falsifiable, deployable architecture for civilization-scale problem solving.

If it is not cared for, it can be lost. If it is cared for, it grows.

If it grows the right way, it becomes the substrate on which something genuinely new — something happy, healthy, and safe — becomes possible.

That is why people should care.

PART VIII — HOW TO CARE FOR IT

The archive is living. Living things require care. Here is how to care for this one.

Rule 1: Do not freeze the count. The corpus is approximately 2,078 files as of June 2026. Do not cite that number in external documents without confirming with Joseph Allen Sprute (JAS). The count fluxes. A fixed count in an external document without confirmation is a MIEVM integrity flag requiring revision before deposit. The archive is living precisely because it continues to grow. Treat the count as approximate and date it when you use it.

Rule 2: Do not cite partial instruments as complete. Every canonical ERES instrument carries a structured identifier: ERES-[DOMAIN]-[YEAR]-[NUMBER] v[VERSION]. When citing an instrument, cite the canonical version. When in doubt about which version is canonical, ask. Prior versions are preserved in GitHub version history. They are not the same as the canonical version, and they should not be represented as such.

Rule 3: Maintain the locked constants. The following are locked and may never be altered in any derivative work or citation without triggering a CCAL attribution violation:

- RHC always expands to **Resonant Harmony Cycle** — never any other expansion.
- REAL formula canonical form: $(E \cdot M \cdot R) / (T \cdot S)$ — Energy · Matter · Resonance over Time · Space. No repeated letters.
- CBGMODD Seat 7 = **Diplomat** — never a duplicated Dignitary.
- FAVORS O = **ODOR** — non-optional.
- CyberRAVE = **Cybernetic Ratings Abolishing Veiled Exchanges** — locked.
- GunnySack = **Guaranteed User-group Network Nullifying Yieldless Service: Accredited Certified Knowledge** — locked.
- SaleBuilders = **Smart-city Adaptive Living Engineering Banishing Untested Infrastructure — Laboratories Delivering Enduring Resilient Systems** — locked.
- BEE = **Bio-Ecologic Economy** — locked.

- HFVN = **Hands-Free Voice Navigation** — locked.
- FDRV = **Fly & Drive RV** — locked.
- GSSG = **Green Solar-Sand Glass** — locked.

Rule 4: Apply the Three Governing Principles to every use. Before using any instrument from this archive, ask three questions: Does this use hurt me? Does this use hurt others? Does this use build for generations to come? If the answer to either of the first two is yes, or the answer to the third is no, the use is inadmissible under CCAL v2.1.

Rule 5: Attribute completely. The required attribution format is:

Original Framework: Joseph Allen Sprute
 ERES Institute for New Age Cybernetics (est. February 2012)
 ORCID: 0000-0001-9946-3221
 License: CARE Commons Attribution License v2.1 (CCAL)
 Source: github.com/ERES-Institute-for-New-Age-Cybernetics
 DOI: 10.5281/zenodo.20010116

Attribution must be preserved intact across all derivative works.

MIEVM outputs must identify JAS as Framework Originator. AI instruments are synthesis contributors, not authors.

Rule 6: Use the MyWay Def-Rel pipeline for all contributions. Any new instrument intended for the corpus moves through: (1) Thought → (2) Consent → (3) Mental work → (4) Movement → (5) Record (Computer, step 5, polarity flip: interiority becoming exteriority) → (6) Platform: GDrive → GitHub → pCloud → ResearchGate primary; Academia.edu / Zenodo conditional → (7) TETRA gate = SPRU / German / ResearchGate. Not published at Step 7 = not in TETRA. The pipeline is not optional. It is the integrity chain.

PART IX — HOW TO GROW IT

The archive grows through use. Every well-formed question posed to it, every MIEVM validation run against it, every derivative work produced under CCAL v2.1, every researcher who builds on it and attributes correctly — all of these are acts of growth.

Here is how to contribute to that growth deliberately.

Grow it by posing Well-Formed Questions. The $WFQ \times AI + ERES$ -GitHub mechanism is the primary growth engine. When you pose a well-formed question to an AI instrument referencing this corpus, and the answer identifies a gap, a tension, or an opportunity for refinement, you have found a place where the corpus can grow. Document the question, the answer, and the gap. Submit it to the ERES Institute via GitHub (Issues) or direct contact (eresmaestro@gmail.com). If the gap is real and the contribution is MIEVM-validated, it becomes a candidate for a new instrument or a version increment of an existing one.

Grow it by contributing new instruments. Every contributor operates under CBGMODD seven-stakeholder governance, with JAS as sole maintainer during the current period. As the community grows, review will be distributed through that governance structure. All contributions are evaluated against five criteria:

1. **Three Principles** — Does it hurt self? Others? Does it build for generations?
2. **Consistency** — Does it align with ERES TERMS (current issue) and locked acronym expansions?
3. **Clarity** — Does it reduce or increase cognitive load?
4. **CCAL Compliance** — Is it attributed? Open-source? No prohibited uses?
5. **Testability** — Can the claim be MIEVM-validated? Does it invite independent testing?

If a contribution is not accepted, NPR applies. You receive a written explanation, specific revision suggestions, and an invitation to resubmit. You will not be rejected as a person.

Grow it by building on it. The most powerful form of growth is when someone takes a CCAL-licensed instrument from this archive and builds something with it — a pilot program, a governance model, an educational curriculum, a software implementation — and then documents what they built, how it worked, and what they learned. That documentation becomes evidence. Evidence becomes validation. Validation becomes the corpus growing into the world it was designed to serve.

Grow it by caring for the ecology that produced it. ERES was built under conditions of material constraint. It was built on SSDI, in a small city in Arkansas, by one person who could not afford to stop working because the work was too important to stop. The VLSA Principle — *If it works in a THOW, it works on a generation ship* — is not just a technical scalability claim. It is a statement about the conditions under which real work gets done. Real work gets done under real constraints, by real people who do not have the luxury of waiting for perfect conditions.

Caring for the ecology that produced this archive means caring for the principle that independent research matters; that solo-orbit

intellectual contribution is real contribution; that constraint-based epistemology — keeping only what can be sustained, only what is real — produces something more honest than institutional abundance often does.

If you believe solo research can't produce systems thinking at this scale, this archive is the answer. Read it. Use it. Attribute it. Build on it. That is how it grows.

PART X — THE LIVING EQUATION

The archive reduces, finally, to three equations that govern everything in it:

$$\begin{aligned} C &= R \times P / M \\ (\text{Cybernetics} &= \text{Resource} \times \text{Purpose} \div \text{Method}) \\ \\ M \times E + C &= R \\ (\text{Matter} \times \text{Energy} + \text{Constant} &= \text{Reason}) \\ \\ \text{REAL} &= (E \cdot M \cdot R) / (T \cdot S) \\ (\text{Energy} \cdot \text{Matter} \cdot \text{Resonance} / \text{Time} \cdot \text{Space}) \end{aligned}$$

And to one operational reduction that makes the equations executable:

$$\text{AnswerQuestion.IT.MyWay} = \text{HowWay}$$

And to one moral vector that gives all of it direction:

$$\text{BEST} / \text{SOUND} / \text{GOOD}$$

And to three principles that interpret every ambiguity:

┃ *Don't hurt yourself. Don't hurt others. Build for generations to come.*

That is what this archive is.

That is what it does.

That is why it matters.

That is how to care for it.

That is how to grow it.
