

ZENODO SUBMISSION

ERES Document Library — Complete Institute Archive

Single record • Two file formats • May 2026

OVERVIEW

This is a single Zenodo deposit containing the complete ERES Institute archive in two file formats: a PDF edition for human readers, citation, and institutional archival; and a Markdown edition for machine-readable use, full-text search, and downstream computational research. Both files are uploaded to the same Zenodo record and share a single DOI. The PDF and Markdown sets are the same intellectual corpus expressed in two formats.

- **ERES_PDF-May3-2026.zip** — 952 PDF files, ~399 MB — for readers
- **ERES_Markdown-May3-2026.zip** — 653 Markdown files, ~66 MB — for computers

ZENODO FORM — FIELD BY FIELD

Upload type

Publication

Sub-type: "Other." "Publication / Other" is the right pick because the deposit is a curated body of authored research output that is broader than any single article, book, thesis, or report.

Publication date

2026-05-03

Title

ERES Document Library – Complete Institute Archive (May 2026)

Optional alternate forms appear at the end of this document if you want to reconsider.

Authors / Creators

Sprute, Joseph Allen

ORCID: 0000-0001-9946-3221

Affiliation: ERES Institute for New Age Cybernetics, Bella Vista, Arkansas, USA

Description / Abstract

The ERES Document Library is the complete, contemporaneous archive of the ERES Institute for New Age Cybernetics, an independent research institute established in February 2012 in Bella Vista, Arkansas, and led continuously since by Joseph Allen Sprute (ORCID 0000-0001-9946-3221). The deposit collects fourteen years of solo research output across cybernetics, cryptographic architecture, AI governance methodology, biometric attestation, multi-stakeholder enterprise governance, integrated economic frameworks, long-horizon systems design, and symbolic-semantic substrates.

This single record contains the corpus in two file formats: a PDF edition (952 files, ~399 MB) intended for human readers, citation, and institutional archival; and a Markdown edition (653 files, ~66 MB) intended for machine-readable use, full-text search, version-controlled re-use, and downstream computational research. Both files are the same intellectual corpus expressed in two formats and share a single Zenodo DOI.

The corpus is anchored by three flagship works: the ERES Trilogy (One-Good, Security-Clearance, Data-Integrity), which maps to the BEST/SOUND/GOOD epistemological triad; the ERES UBIMIA Manual v1.1 (April 25, 2026; 188 pages), the operational reference document for an integrated, biometrically-anchored economic framework; and the ERES Cryptographic Stack with its companion ERES Attestation and Authorization Protocol (EAAP v1.3, 2,885 lines), specifying resonance-keyed semantic superposition built around three polysemantic primitives (GCF, EDF, USC), the canonical interlock formula ($\text{CBGMODD} \times \text{FAVORS} + \text{BERA} = \text{RATE}$), and a hardware-rooted attestation substrate with post-quantum migration timeline.

The library further includes: the AI Governance Position Paper (three iterative versions); the ERES Patriot Dividend white paper (v4.0); the Department of Family Amity (DOFA) whitepaper series in three versions, establishing a seven-seat CBGMODD Family Stewardship Council; the SCALULAR Engine Document (Scalable Certification Architecture for Lifelong Universal Learning and Adaptive Resilience); the 1000-Year Future Map and ERES Equity Covenant (1000-year governance instruments); BERA (Bio-Electric Resonance Architecture) reference documentation across four indices (Aura Resonance Index, Emission Resonance Index, Resonant Harmony Cycle, Resonant Continuity Index); the FAVORS multi-modal authentication framework; the CBGMODD seven-stakeholder reference architecture (Citizen, Business, Government, Mediator, Military, Dignitary, Diplomat); the Talonics Symbol Matrix (452 elements, 12 parts, 18×7 grid); the GAIA BODY and BRAINS specifications; the PlayNAC KERNEL codebase documentation through V7.6; the ESVRD (Drive Resonant Vacuum) cross-Pacific paper co-authored with Tatung University, Taiwan; Government Partnership Briefs in Arabic, Chinese, English, German, Indonesian, Japanese, Russian, and Spanish; the March 2026 Hague intellectual-priority filing; the complete ERES TERMS series (forty-seven issues); and foundational era documents extending back to 1997 (SaleBuilders) and pre-1997 (CyberRAVE, including the constraint-based culling methodology that produced the 72 Key Domains from the Register of Collective Indices).

The library is methodologically distinguished by the Multi-Instrument Ensemble Validation Method (MIEVM), an original cross-validation methodology that uses parallel large-language-model nodes (currently a four-platform

ensemble: Claude, Grok, DeepSeek, ChatGPT) to compensate for solo-researcher bandwidth constraints with reproducible inter-platform agreement signal. MIEVM is derived from the same constraint-based culling epistemology that produced the 72 Key Domains of CyberRAVE.

All documents are released under the CARE Commons Attribution License v2.1 (CCAL), an open-licensing framework authored within the ERES Institute and intended to make institute outputs durably citable, attributable, and re-usable across academic, governmental, and enterprise contexts. The library complements the author's continuous ResearchGate publication record (424+ entries under ORCID 0000-0001-9946-3221) and the institute's GitHub organization, and supersedes earlier point-in-time deposits as the canonical May 2026 snapshot of the ERES corpus.

Version

1.0 (May 2026 snapshot)

Language

eng (with multilingual partnership briefs included: ara, deu, ind, jpn, rus, spa, zho)

Keywords / Subjects

cybernetics; new age cybernetics; ERES Institute; cryptographic architecture; ERES Cryptographic Stack; attestation protocol; EAAP; post-quantum cryptography; hardware-rooted attestation; resonance-keyed semantic superposition; AI governance; AI ethics; multi-instrument ensemble validation; MIEVM; LLM cross-validation; biometric attestation; bio-electric resonance; BERA; FAVORS; CBGMODD; UBIMIA; Patriot Dividend; Meritcoin; Gracechain; proof-of-resonance; NBERS; SCALULAR; lifelong learning certification; DOFA; family stewardship; multi-stakeholder governance; long-horizon governance; 1000-year governance instruments; Hague filing; Talonics; Talonics Symbol Matrix; GAIA Entity; PlayNAC; PlayNAC KERNEL; ERES Trilogy; constraint-based culling; Triune Math; CCAL; CARE Commons Attribution License; open access; open standards; institute archive

Additional notes

This single record contains the complete ERES Institute corpus in two file formats. The PDF edition (ERES_PDF-May3-2026.zip, 952 files, ~399 MB) is the canonical preservation form for human readers and citation; the Markdown edition (ERES_Markdown-May3-2026.zip, 653 files, ~66 MB) is the machine-readable form for full-text search, computational research, and version-controlled re-use. The Markdown edition was generated more recently than the earliest source PDFs and therefore covers the date range July 2025 through May 2, 2026, while the PDF edition extends further back (the earliest PDFs date to 2015); readers comparing the two should treat the PDF edition as the historically deeper set and the Markdown edition as the contemporary working set. Both files together constitute the May 2026 canonical snapshot of the ERES corpus.

License

Other (Open) – CARE Commons Attribution License v2.1 (CCAL)

Zenodo's license dropdown may not list CCAL by name. If CCAL is not selectable, choose "Creative Commons Attribution 4.0 International" (CC-BY-4.0) as the closest standardized equivalent and add this sentence to the Additional Notes field: "The operative license for this deposit is the CARE Commons Attribution License v2.1 (CCAL), authored within the ERES Institute. CCAL is functionally compatible with CC-BY-4.0 in its attribution requirements; CC-BY-4.0 is selected here as the closest standardized equivalent for repository tooling." Include the CCAL license text as a top-level file in the deposit (LICENSE.md or LICENSE.pdf) alongside the two ZIP files.

Funding

None. Self-funded independent research.

Related identifiers

Add these author and institute identifiers so the deposit links cleanly to existing surfaces:

- <https://orcid.org/0000-0001-9946-3221> — Relation: isIdentifiedBy — Author identifier
- **ResearchGate profile (Joseph Allen Sprute)** — Relation: isSupplementedBy — Continuous publication record (424+ entries)
- **ERES Institute GitHub organization** — Relation: isSupplementedBy — Source artifacts and code

If you have a Hague filing reference number from the March 2026 submission you can also add it here with relation: isReferencedBy.

Contributors

Leave empty at the deposit level; per-document collaborator attributions are visible inside the deposit. Acknowledged collaborators on individual documents include: Emanuel M. Alexiou (governance and linguistic bridge strategy), Jimmy D. Butzbach (Resonant Continuity Index co-development), SYU JIA WUN of Tatung University Taiwan (ESVRD co-authorship), and Andrzej Skulski (international EAAP collaboration).

References

None at the deposit level. Per-document references are contained within each PDF and Markdown file.

Communities

Optional. Suggested associations (request membership where required):

- **Open Science** — (general community, if available)
- **Cybernetics, Systems Theory & Cybernetic Engineering** — (if available)
- **Open Cryptography & Standards** — (if available)
- **AI Ethics & Governance** — (if available)

Community membership is optional and does not affect DOI minting. Add only those for which the deposit is genuinely on-topic.

Files to upload

ERES_PDF-May3-2026.zip — 952 PDF files, ~399 MB (for readers)

ERES_Markdown-May3-2026.zip — 653 Markdown files, ~66 MB (for computers)

Strongly suggested top-level files to add alongside the two ZIPs: (a) LICENSE.md or LICENSE.pdf containing the CCAL v2.1 license text in full; (b) README.md describing the archive structure, the two-format design, and the canonical index pointer; (c) ERES_Complete_Archive_Index_UNIFIED.md (or its PDF equivalent) so readers can browse the table of contents without downloading either ZIP. These three small companion files turn the deposit from “two opaque archives” into a self-describing record.

Zenodo's per-deposit file size limit is generous (50 GB by default; raise on request). Your combined upload is ~465 MB, well within limits. Total upload time will dominate the workflow — plan for a stable connection.

TITLE ALTERNATES (IF YOU WANT TO RECONSIDER)

The recommended title above is descriptive, citation-friendly, and balanced. If you would prefer a different framing, here are four alternates:

Option A — Compact institutional

ERES Institute Complete Archive (May 2026)

Cleanest. Trade-off: loses “Document Library,” which is more accessible to non-specialist readers.

Option B — Span-forward

ERES Document Library: Fourteen Years of New Age Cybernetics, 2012–2026

Foregrounds the duration and the framework name. Excellent for discoverability.

Option C — Discipline-forward

ERES Document Library: Cybernetics, Cryptographic Architecture, AI Governance, and Integrated Economic Frameworks (May 2026)

Maximum keyword coverage in the title itself. Trade-off: long.

Option D — Author-forward

The ERES Corpus of Joseph Allen Sprute, 2012–2026: Complete Document Library (May 2026)

Maximum citation transparency. Best if you want unambiguous single-author attribution in citation managers.

ABSTRACT VARIANTS

The six-paragraph abstract used in the field-by-field section is the long form, recommended for the Description field. Below are shorter variants for use in social posts, cover letters, or one-line summaries elsewhere.

One-sentence form

The complete fourteen-year archive of the ERES Institute for New Age Cybernetics in two formats: 952 PDFs (399 MB) for readers and 653 Markdown files (66 MB) for computers, covering cybernetics, cryptographic architecture, AI governance, biometric attestation, integrated economic frameworks, and long-horizon governance, all under CCAL v2.1.

Short form (~100 words)

The ERES Document Library is the complete contemporaneous archive of the ERES Institute for New Age Cybernetics, established 2012, deposited here as a single record in two file formats: PDF for human readers and Markdown for machines. The corpus contains the ERES Trilogy, the ERES UBIMIA Manual v1.1 (188 pages), the ERES Cryptographic Stack and EAAP v1.3, the AI Governance Position Paper series, the Patriot Dividend white paper, the DOFA whitepapers, the SCALULAR engine document, the 1000-Year Future Map, BERA reference documentation, the Talonics Symbol Matrix, multilingual government partnership briefs, and the March 2026 Hague intellectual-priority filing. All works released under the CARE Commons Attribution License v2.1.

Medium form (~250 words)

The ERES Document Library is the complete contemporaneous archive of the ERES Institute for New Age Cybernetics, an independent research institute established February 2012 in Bella Vista, Arkansas, and led continuously by Joseph Allen Sprute (ORCID 0000-0001-9946-3221). It collects fourteen years of solo research output across cybernetics, cryptographic architecture, AI governance methodology, biometric attestation, multi-stakeholder enterprise governance, integrated economic frameworks, long-horizon systems design, and symbolic-semantic substrates.

This single Zenodo record contains the corpus in two file formats: a PDF edition (952 files, ~399 MB) for human readers and citation, and a Markdown edition (653 files, ~66 MB) for machine-readable use and computational research. Both files share a single DOI.

The corpus is anchored by the ERES Trilogy (One-Good, Security-Clearance, Data-Integrity), the ERES UBIMIA Manual v1.1 (188 pages, April 2026), and the ERES Cryptographic Stack with the ERES Attestation and Authorization Protocol (EAAP v1.3, 2,885 lines). It is methodologically distinguished by the Multi-Instrument Ensemble Validation Method (MIEVM), an original cross-validation methodology using parallel large-language-model nodes.

The library further includes the AI Governance Position Paper series, the Patriot Dividend white paper, the DOFA whitepapers, the SCALULAR engine document, BERA reference documentation, the Talonics Symbol Matrix, the PlayNAC KERNEL codebase documentation, multilingual government partnership briefs in eight languages, the March 2026 Hague intellectual-priority filing, and the complete forty-seven-issue ERES TERMS series. All documents are released under the CARE Commons Attribution License v2.1 (CCAL).

AFTER PUBLICATION

Once Zenodo mints the DOI, propagate it across the institute's existing surfaces so the canonical archive is reachable from every entry point a reader might take:

- Add the DOI to the institute's GitHub organization README as the canonical archive pointer.
- Add the DOI to the author's ResearchGate profile as a single “Data / Software” entry.
- Verify the DOI propagated to the author's ORCID profile under “Works” (Zenodo can push this automatically when the ORCID is entered into the deposit form).
- Update the LinkedIn About section to reference the Zenodo DOI as the durable archive of the institute's output.
- Reference the DOI in the MIT Press outreach package as the canonical archive pointer.
- Add the DOI to the next ERES TERMS issue (#48) so the institute's running terminology document records the deposit event.
- Tag a corresponding Release on the GitHub organization (“May 2026 Library Snapshot”) and link the Zenodo DOI in the release notes — bidirectional path between the two.
