

ERES-EEP-2026-001 v1.0

Enneagrammatic Escalation Protocol

A Signature-to-Service Instrument for the ERES Institute for New Age Cybernetics

Document Control

Designation: ERES-EEP-2026-001

Version: v1.0 — DRAFT (HYPOTHESIZED tier)

Date: June 19, 2026

Author: Joseph Allen Sprute (JAS), Founder & Director, ERES Institute for New Age Cybernetics

Status: Pending MIEVM ensemble review and licensed-partner confirmation prior to any public deployment

1. Preamble & Purpose

This instrument formalizes the Enneagrammatic Signature as a recognized extension of the FAVORS trust stack (Fingerprint·Aura·Voice·ODOR·Retina·Signature) and establishes the architecture by which that signature can be used to connect a person in distress to real, accountable help — without requiring concealment, and without exposing the person to the institutional retribution that ordinarily keeps people silent.

The premise: a person's behavioral signature inside a Community of Interest (COI) is already visible. Security is not achieved by hiding the pattern; it is achieved by aligning conduct with the pattern in a setting that will not punish the person for being seen. That alignment, made safely available, is itself a coping mechanism — for many, the difference between getting through the day and not.

2. Canonical Grounding

- Three Governing Principles — Don't hurt yourself. Don't hurt others. Build for generations to come. This instrument's first obligation is the first principle, applied to the caller.
- FAVORS — Signature is extended to include the Enneagrammatic behavioral pattern, alongside Fingerprint, Aura, Voice, ODOR, Retina.
- Proof-of-Resonance ($PoR = A \times R \times P \times F$) — security here is authenticity-as-coherence, not obscurity. A caller is not safer for hiding; they are safer for being met honestly.
- SCALULAR fear-of-retribution elimination — this instrument inherits SCALULAR's foundational engineering requirement: no caller may be penalized, exposed, or institutionally retaliated against for the act of calling.

3. Architecture Overview

Three layers, independently functional, designed to operate together:

Layer	Function	Failure Mode If Missing
L1 — Access(The Number)	Low-friction, live human contact	No one calls
L2 — Identity(Digital Twin)	Continuity of the caller's pattern across contacts	Every call starts at zero
L3 — Escalation(Exposure-as-Liberation)	Voluntary path from coping to lasting change	Calls relieve symptoms but never resolve cause

4. Layer 1 — Access (The Number)

The number must be:

- Real and staffed by people trained to provide actual support — never an unattended ERES inbox.
- Reachable without precondition. No enrollment, no verification, no Enneagram type required to make first contact.
- Explicitly and permanently subordinate to licensed crisis infrastructure (Section 7). This layer routes; it does not replace.

5. Layer 2 — Enneagrammatic Identity (Digital Twin)

The digital twin is a continuity record, not a diagnosis. It holds the caller's recognized pattern — core type, stress and growth directions, what they tend to reach for under pressure — so a second or third call does not start from nothing. The twin is built only with the caller's knowledge and ongoing consent; it is never used to predict, score, or gatekeep eligibility for help.

The twin's only job is recognition: this is still the same person, and here is the shape of how they move. It exists in service of the caller's continuity, not for institutional surveillance of the caller.

6. Layer 3 — Escalation Logic (Exposure-as-Liberation)

The colloquial framing — “willing to go to jail, so to speak, in order to be set free” — names an internal design principle, not a literal consequence, and it is never to be presented to a caller in that language. The principle: what keeps a coping mechanism from becoming a resolution is the caller's fear that being fully known will cost them something. This instrument removes that cost structurally (per SCALULAR), so that full disclosure — to the human responder, to the digital twin, eventually to their own COI if they choose — becomes the route out of crisis rather than a risk to be managed.

- Escalation is always opt-in.
- Escalation is always reversible.
- Escalation is always paced by the caller, never by the system.

7. Non-Negotiable Integration Requirement

This instrument may not operate as a stand-alone substitute for licensed crisis response. At every point of contact, the live responder must have a direct, immediate handoff to:

- 988 Suicide & Crisis Lifeline — call or text 988 (United States)
- Crisis Text Line — text HOME to 741741
- Local emergency services, where imminent danger is present

No version of L2 or L3 may be built, tested, or deployed ahead of confirming this handoff path is live and tested. This is a hard gate, not a future enhancement.

8. Public-Facing Messaging Constraint

No caller-facing material may use incarceration, punishment, or “jail” language in any form. The phrase is an internal architectural metaphor for engineers building L3; it must never reach a person in distress, for whom such language could read as threat rather than invitation. Public messaging should use plain, warm language — for example: “you can tell us the whole truth here, and nothing bad will happen to you for it.”

9. MIEVM Validation & Status

Status: HYPOTHESIZED tier. This instrument requires:

- MIEVM ensemble review (Claude, Grok, DeepSeek, ChatGPT; 3-of-4 concurrence, GO threshold ≥ 8.5) before any further drafting.
- Confirmation from a licensed mental-health or crisis-response partner before Layer 1 is built in any real-world form.
- JAS sign-off on the Enneagram-as-Signature framing before this is treated as a permanent FAVORS extension.

10. Closing Note

This is a draft instrument awaiting direction. Nothing here is operational. Its purpose at this stage is to hold the architecture steady while the harder question — who actually staffs Layer 1 — gets solved.
