GLOBAL PROFILE

Independent researcher and systems architect with a fourteen-year continuous record of developing ERES Key Documents—a structured corpus of cybernetic, economic, biometric, cryptographic, and governance frameworks designed for multi-sovereign, humanitarian, and international NGO contexts.

Creator of the ERES Trilogy, UBIMIA Manual, ERES Cryptographic Stack, EAAP Attestation Protocol, BERA biometric substrate, Talonics symbolic matrix, PlayNAC Simulator, and 1000-Year Future Map.

Methodological originator of MIEVM (Multi-Instrument Ensemble Validation Method), a multi-platform AI verification methodology.

Work spans digital identity, resonance-based biometrics, economic stabilization, long-range governance, AI safety, ecological continuity, and planetary-scale planning.

CORE EXPERTISE

- Cybernetics & Systems Theory
- AI Governance & Cross-Platform Verification (MIEVM)
- Cryptographic & Attestation Architecture
- Biometric Resonance Systems (BERA)
- Constitutional & Governance Frameworks
- Multi-Stakeholder Civilization Planning
- Resonance-Based Economic Models
- Symbolic & Semantic Substrate Design (Talonics)
- Large-Scale Documentation & Standards Authoring
- Long-Horizon Sustainability Frameworks

PROFESSIONAL EXPERIENCE

Founder & Director

ERES Institute for New Age Cybernetics

2012 – Present

- Author and architect of the complete ERES Key Document Library, including technical specifications, economic frameworks, governance models, biometric systems, AI verification methodologies, and multi-lifecycle sustainability constructs
- Designed the MIEVM cross-validation method for multi-LLM ensemble assessment
- Produced and versioned major standards, manuals, cryptographic specifications, and resonance-based identity tools
- Developed seven-stakeholder governance structure (CBGMODD), multi-modal authentication systems (FAVORS), and resonance-indexed continuity metrics
- Generated multilingual governance briefs, international review variants, and open-licensed documents under CCAL v2.1
- Directed development of the PlayNAC simulation engine integrating ERES Trilogy logic and UBIMIA monograph principles

Founder & Director

SaleBuilders

2007 – 2012

- Developed early socio-cybernetic and information-flow models that later informed UBIMIA, Meritcoin/Gracechain, and EarnedPath
- Provided systems design, web infrastructure, and ontology development for complex, multi-tiered information networks

Lead Architect

CyberRAVE

1997 – 2007

- Produced the 72 Key Domains, a constraint-derived cybernetic classification system foundational to later ERES epistemology
- Designed early identity, semantic, and systems-integration approaches used in subsequent ERES frameworks

MILITARY SERVICE

United States Army – Oregon Army National Guard (11B Infantry)

1983 – 1989

Specialist E-4 • Dragon Gunner • Expert Weapons Qualification • Honorable Discharge

FEATURED: ERES KEY DOCUMENTS

ERES Trilogy (Three-Volume Corpus)

1. One-Good (UBIMIA): integrated economic and biometrically anchored societal framework
2. Security-Clearance: identity, clearance, national-accounts redesign, lifelong-learning architecture
3. Data-Integrity: biometric authentication, multi-stakeholder governance, sensor and integrity substrates

ERES UBIMIA Manual (v1.1, 188 pages)

Operational model for integrated identity, economic stability, and societal provisioning.

ERES Cryptographic Stack (v1.3)

Semantic-superposition primitives (GCF, EDF, USC) • hardware-rooted attestation substrate • PQM migration plan.

EAAP — ERES Attestation & Authorization Protocol (v1.3)

2,885-line attestation standard for biometric integrity, resonance verification, and post-quantum transition.

BERA — Bio-Electric Resonance Architecture

Four resonance indices (ARI, ERI, RHC, RCI) for privacy-forward identity assurance and continuity.

FAVORS Multi-Modal Authentication

Six-factor biometric composite (Fingerprint, Aura, Voice, Odor, Retina, Signature).

CBGMODD — Seven-Stakeholder Governance Model

Citizen • Business • Government • Mediator • Military • Dignitary • Diplomat
Universal decision taxonomy across ERES frameworks.

Talonics Symbol Matrix (452 Elements)

12-part, 18×7 symbolic substrate for semantic reasoning and resonance architectures.

SCALULAR — Lifelong Universal Learning Architecture

Four-pillar certification model for Health, Law, Protection, Skills/Trade.

1000-Year Future Map

Civilizational planning instrument for multi-century stability and stewardship.

VLSA — Very Long-Horizon Sustainability Architecture

Intergenerational resilience and extreme-timescale infrastructure logic.

PlayNAC Simulator (Kernel 7.x)

Cybernetic simulation engine implementing ERES Trilogy × UBIMIA logic for scenario modeling.

INTERNATIONAL DISSEMINATION

- Publications across eight language variants
- 424+ research documents via ResearchGate, GitHub, Zenodo, Substack, Medium
- Multiple global versions of governance, policy, economic, and identity briefs
- All content openly licensed for global NGO, academic, and governmental reuse (CCAL v2.1)

EDUCATION

University of Oregon

Business Administration (72 Credits)

Supplemental: Analytical Math • Computer Science • Japanese Language

LANGUAGES

English (native)

Work translated / distributed across multiple language variants through ERES briefs.

OPEN LICENSING

All ERES outputs are available under CARE Commons Attribution License v2.1, designed for durability, transparency, academic reuse, and NGO/governmental integration.
